Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System:**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Hazardous Waste Summary:**

Waste Code: D000

Waste Description: Not Defined

Waste Code: D001

Waste Description: IGNITABLE WASTE

Waste Code: D002

Waste Description: CORROSIVE WASTE

Waste Code: F002

Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F004

Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Name: 328 SOUTH 3RD AVENUE  
Address: 328 SOUTH 3RD AVENUE  
City,State,Zip: MARSHALLTOWN, IA 50158  
Recipient Name: Marshalltown, City of  
Grant Type: Assessment  
Property Number: 07-35-276-024  
Parcel size: 0.41  
Latitude: 42.0447359  
Longitude: -92.9080287  
HCM Label: -  
Map Scale: -  
Point of Reference: -  
Highlights:

Site soils were sampled and analyzed for pesticides, PAHs, RCRA metals, and VOCs. Several RCRA metals (Mercury, arsenic, lead, barium, Chromium, and silver) were detected above laboratory reporting limits but were below applicable Statewide Standards. Groundwater was not encountered at the site due to refusal at bedrock. Former Use: Property contained light industrial development from 1884-1894. This included an implement warehouse in 1884; a wagon warehouse in 1888; and a junk shop and the Marshalltown Light, Power and Railroad Co , which included a car barn, in 1894. Property contained light industrial and commercial developmetn from 1901-1921. This included a railroad YMCA and the Marshalltown Light, Power and Railroad Co , which included a street car barn, in 1901; a railroad YMCA and the Marshalltown Light, Power and Street Railway Co in 1910; a vacant structure (former railroad YMCA) and the Iowa Railway and Light Co , which included a street car barn, in 1921. Property contained commercial development from 1931-1945. This included a hotel and a motor coach garage and repair shop with an associated gasoline tank located in the R.O.W. Property contained light industrial and residential development from 1958-1964. This included an apartment building and a feed mixing plant; the 1964 Sanborn map identified a gas tank located in the R.O.W. Property contained commercial development from 1968-1983 and a vacant lot since 1994. North American Datum of 1983

Name: 328 SOUTH 3RD AVENUE  
Address: 328 SOUTH 3RD AVENUE  
City,State,Zip: MARSHALLTOWN, IA 50158  
Recipient Name: Marshalltown, City of  
Grant Type: Assessment  
Property Number: 07-35-276-024  
Parcel size: 0.41  
Latitude: 42.0447359  
Longitude: -92.9080287  
HCM Label: -  
Map Scale: -  
Point of Reference: -  
Highlights: Site soils were sampled and analyzed for pesticides, PAHs, RCRA metals, and VOCs. Several RCRA metals (Mercury, arsenic, lead, barium, Chromium, and silver) were detected above laboratory reporting limits but were below applicable Statewide Standards. Groundwater was not encountered at the site due to refusal at bedrock. Former Use: Property contained light industrial development from 1884-1894. This included an implement warehouse in 1884; a wagon warehouse in 1888; and a junk shop and the Marshalltown Light, Power and Railroad Co , which included a car barn, in 1894. Property contained light industrial and commercial developmetn from 1901-1921. This included a railroad YMCA and the Marshalltown Light, Power and Railroad Co , which included a street car barn, in 1901; a railroad YMCA and the Marshalltown Light, Power and Street Railway Co in 1910; a vacant structure (former railroad YMCA) and the Iowa Railway and Light Co , which included a street car barn, in 1921. Property contained commercial development from 1931-1945. This included a hotel and a motor coach garage and repair shop with an associated gasoline tank located in the R.O.W. Property contained light industrial and residential development from 1958-1964. This included an apartment building and a feed mixing plant; the 1964 Sanborn map identified a gas tank located in the R.O.W. Property contained commercial development from 1968-1983 and a vacant lot since 1994.

Point of Reference: Center of a Facility or Station  
Highlights: Lead was detected above the Statewide Standard. Cumulative risk calculations were unacceptable for the residential and non-residential use, so cleanup is required. Further assessment was recommended to assess the extent of lead contamination identified on the site. Whether ICs or ECs will be required is unknown until cleanup remedy is selected based on extent of lead contamination and planned reuse. Former Use: Property contained commercial and light industrial development from 1884-1901. These uses included a meat locker and associated icehouse, warehouse, a vacant structure, and a restaurant in 1884; a meat locker and associated icehouse and smokehouse, dry good store, a grocery store, and a warehouse in 1888; a meat locker and associated sausage factory and smokehouse, dry goods store, grocery store, and restaurant in 1894; and a meat locker and associated sausage factory and smokehouse, shoe store, and cigar factory in 1901. The property contained commercial development and a railroad passenger depot from 1910-1945. This included an unidentified commercial use in 1910; a beer warehouse in 1921; a commercial store in 1931; and a cold storage locker room in 1945. The property has contained strictly commercial development since 1958. This included a cold storage locker room from 1958-1968; a storage

Past Use: Multistory -  
Property Description:

Property contained commercial and light industrial development from 1884-1901. These uses included a meat locker and associated icehouse, warehouse, a vacant structure, and a restaurant in 1884; a meat locker and associated icehouse and smokehouse, dry good store, a grocery store, and a warehouse in 1888; a meat locker and associated sausage factory and smokehouse, dry goods store, grocery store, and restaurant in 1894; and a meat locker and associated sausage factory and smokehouse, shoe store, and cigar factory in 1901. The property contained commercial development and a railroad passenger depot from 1910-1945. This included an unidentified commercial use in 1910; a beer warehouse in 1921; a commercial store in 1931; and a cold storage locker room in 1945. The property has contained strictly commercial development since 1958. This included a cold storage locker room from 1958-1968; a storage business in 1973; an electric and telephone company in 1984; a water conditioning company from 1988-1993; listed as vacant or unlisted from 1998-2008; and currently contains a vacant commercial building.

Map Scale: -  
Point of Reference: Center of a Facility or Station  
Highlights: Phase II found PAHs in soil. Specifically, Benzo[a]pyrene was detected above the Statewide Standard in one soil sample on the site. However, cumulative risk calculations were below regulatory limits for residential use (most restrictive), so cleanup is not required. Former Use: The property contained residential development from 1884-1901(including two coal sheds in 1884 and one coal shed in 1888). The property later contained a railroad passenger depot and an elevated water tank from 1910-1945 and a vacant lot from 1952-2009. The current owner constructed a metal storage building on on-site in 2009.

| Property Description:               | The property contained residential development from 1884-1901(including two coal sheds in 1884 and one coal shed in 1888). The property later contained a railroad passenger depot and an elevated water tank from 1910-1945 and a vacant lot from 1952-2009. The current owner constructed a metal storage building on on-site in 2009.                                                                                                                                                                                                                                                                                        |

| Highlights:                         | Phase II found PAHs in soil. Specifically, Benzo[a]pyrene was detected above the Statewide Standard in one soil sample on the site. However, cumulative risk calculations were below regulatory limits for residential use (most restrictive), so cleanup is not required. Former Use: The property contained residential development from 1884-1901(including two coal sheds in 1884 and one coal shed in 1888). The property later contained a railroad passenger depot and an elevated water tank from 1910-1945 and a vacant lot from 1952-2009. The current owner constructed a metal storage building on on-site in 2009. |

| Property Description:               | The property contained residential development from 1884-1901(including two coal sheds in 1884 and one coal shed in 1888). The property later contained a railroad passenger depot and an elevated water tank from 1910-1945 and a vacant lot from 1952-2009. The current owner constructed a metal storage building on on-site in 2009. |

Name: 309 SOUTH 4TH AVENUE  
Address: 309 SOUTH 4TH AVENUE  
City,State,Zip: MARSHALLTOWN, IA 50158  
Recipient Name: Marshalltown, City of  
Grant Type: Assessment  
Property Number: 07-35-276-014  
Parcel size: 0.11  
Latitude: 42.044597  
Longitude: -92.906639  
HCM Label: Interpolation-Map  
Map Scale: -  
Point of Reference: Center of a Facility or Station  
Highlights: Phase I confirmed lead and PAH contamination in soil. Based on the data collected, it is the opinion of HR Green that the detected contaminants in Range 1 soil represent a possible risk to the human health and the environment. It is unknown if cleanup is required since do not know the end use of the property and recommended additional sampling to further assess the nature and extent of the contamination identified in soil borings SB1, SB3, and SB4 prior to any redevelopment efforts. If the property is redeveloped for non-residential use, cleanup would not be required according to cumulative risk calculations. Former Use: The property contained a residential home from 1884-1988 and a vacant lot since 1993.

Address: 309 SOUTH 4TH AVENUE  
City,State,Zip: MARSHALLTOWN, IA 50158  
Recipient Name: Marshalltown, City of  
Grant Type: Assessment  
Property Number: 07-35-276-014  
Parcel size: 0.11  
Latitude: 42.044597  
Longitude: -92.906639  
HCM Label: Interpolation-Map  
Map Scale: -  
Point of Reference: Center of a Facility or Station  
Highlights: Phase I confirmed lead and PAH contamination in soil. Based on the data collected, it is the opinion of HR Green that the detected contaminants in Range 1 soil represent a possible risk to the human health and the environment. It is unknown if cleanup is required since do not know the end use of the property and recommended additional sampling to further assess the nature and extent of the contamination identified in soil borings SB1, SB3, and SB4 prior to any redevelopment efforts. If the property is redeveloped for non-residential use, cleanup would not be required according to cumulative risk calculations. Former Use: The property contained a residential home from 1884-1988 and a vacant lot since 1993.

SMR in a reject ltr format. Does not appear ltr was ever sent. PEI will review 02/13/04 SMR and 12/21/04 SMR and revise letter if necessary. Apologized to PEI for my oversight. --kw03/16/05: Reviewed SMRs, accepted reclassification to low risk. SMR due 10/30/05.04/27/05: REC'D FPR.05/23/05: GAB letter approving Trileaf's SMR budget.10/21/05: REC'D SMR. LR. TIER 2 SMR SOFTWARE DISK. MTBE WORKSHEET & DISK. bsg10/27/05: REC'D SIGNED SMR COVER PAGE. Bsg11/09/05: Internal review of SMR and SMR revisions - acceptable. Filed report (ED).06/05/06: REC'D GAB LETTER APPROVING SMR BUDGET BY TRILEAF. Bsg08/28/06: REC'D SMR. SITE RECLASSIFICATION RECOMMENDED FROM LR TO HR. TIER 2 SMR SOFTWARE DISK. MTBE WORKSHEET & DISK. bsg09/20/06: REC'D SIGNED SMR COVER PAGE. Bsg12/01/06: Sent Reclass SMR accept letter. Site now HR for GVES-ACSNR1. SMR and Post Tier 2 WS due 3/30/07. First CA teleconference scheduled for 4/12/07. Will suggest conducting OE in vicinity of old USTs, 3MW, and failing soil gas sample. Otherwise, site likely to fluctuate between LR and HR and never get adequately reclassified. --kw01/02/07: REC'D FPR.

Property Description:

The property is a vacant lot located north of East Nevada Street and east of an un-named access road in a mixed-use area of Marshalltown. Historical uses of the property included a lumber yard (1884 to approximately 1935), vacant lot (1939 to 1950), and a machine shop (1952 to approximately 1983). The property has been vacant since approximately 1983.

| Highlights:                 | Based on data gathered during this Phase I ESA, a Phase II ESA was recommended to assess the condition of the property to determine if the suspected RECs have impacted the property. Former Use: The property is an undeveloped vacant lot located north of East Nevada Street and in-between South 4th Avenue to the east and an access road to the west in a mixed-use area of Marshalltown. Property contained light industrial development from 1884-1980. Historical uses of the property included a lumber yard on a portion of the site from 1884 to approximately 1921 with concurrent uses as a malt house (1884), pickle factory (1888), storage building in 1904. A portion of the property was used as a carpet cleaning business from approximately 1901 to 1910. A storage building containing empty barrels was present on the site from 1921 to 1971. The property has been vacant since approximately 1980. |

Property Description:

The property is an undeveloped vacant lot located north of East Nevada Street and in-between South 4th Avenue to the east and an access road to the west in a mixed-use area of Marshalltown. Property contained light industrial development from 1884-1980. Historical uses of the property included a lumber yard on a portion of the site from 1884 to approximately 1921 with concurrent uses as a malt house (1884), pickle factory (1888), storage building in 1904. A portion of the property was used as a carpet cleaning business from approximately 1901 to 1910. A storage building containing empty barrels was present on the site from 1921 to 1971. The property has been vacant since approximately 1980.

**Historic Generators:**

Receive Date: 20040330  
Handler Name: ACME BRASS & ALUMINUM FOUNDRY  
Federal Waste Generator Description: Small Quantity Generator  
State District Owner: Not reported  
Large Quantity Handler of Universal Waste: No  
Recognized Trader Importer: No  
Recognized Trader Exporter: No  
Spent Lead Acid Battery Importer: No  
Spent Lead Acid Battery Exporter: No  
Current Record: No  
Non Storage Recycler Activity: Not reported  
Electronic Manifest Broker: Not reported

Receive Date: 19941013  
Handler Name: ACME BRASS & ALUMINUM FOUNDRY  
Federal Waste Generator Description: Conditionally Exempt Small Quantity Generator  
State District Owner: Not reported  
Large Quantity Handler of Universal Waste: No  
Recognized Trader Importer: No  
Recognized Trader Exporter: No  
Spent Lead Acid Battery Importer: No  
Spent Lead Acid Battery Exporter: No  
Current Record: No  
Non Storage Recycler Activity: Not reported  
Electronic Manifest Broker: Not reported

**Environmental Interest/Information System:**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants.

AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring. IDNR-EFD (Iowa Department Of Natural Resources - Emission Factor Documentation) provides information about existing emission factors

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Lists of Federal NPL (Superfund) sites***

##### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

##### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

|                                         |                                        |

|                                         | Data Release Frequency: Quarterly      |

##### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### ***Lists of Federal Delisted NPL sites***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/27/2022  
Date Data Arrived at EDR: 05/05/2022

### ***Lists of Federal sites subject to CERCLA removals and CERCLA orders***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021  
Date Data Arrived at EDR: 06/24/2021  
Date Made Active in Reports: 09/20/2021  
Number of Days to Update: 88

Source: Environmental Protection Agency  
Telephone: 703-603-8704  
Last EDR Contact: 06/27/2022  
Next Scheduled EDR Contact: 10/10/2022  
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/27/2022

Last EDR Contact: 07/01/2022  
Next Scheduled EDR Contact: 10/24/2022  
Data Release Frequency: Quarterly

### ***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

### ***Lists of Federal RCRA TSD facilities***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

### ***Lists of Federal RCRA generators***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

|                                         |                                         |

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

|                                         |                                         |
|-----------------------------------------|-----------------------------------------|

### RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

|                                         |                                         |

|                                         | Data Release Frequency: Varies          |

#### US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

|                                         |                                         |

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal ERNS list***

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 06/14/2022

Date Data Arrived at EDR: 06/15/2022

Date Made Active in Reports: 06/21/2022

Number of Days to Update: 6

Source: National Response Center, United States Coast Guard

Telephone: 202-267-2180

Last EDR Contact: 06/15/2022

Next Scheduled EDR Contact: 10/03/2022

Data Release Frequency: Quarterly

## ***Lists of state- and tribal hazardous waste facilities***

SHWS: Registry of Hazardous Waste or Hazardous Substance Disposal Sites

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 12/31/2021

Date Data Arrived at EDR: 01/12/2022

Date Made Active in Reports: 03/30/2022

Number of Days to Update: 77

Source: Department of Natural Resources

Telephone: 515-281-8801

Last EDR Contact: 07/06/2022

Next Scheduled EDR Contact: 10/24/2022

Data Release Frequency: Annually

## ***Lists of state and tribal landfills and solid waste disposal facilities***

SWF/LF: Permitted Solid Waste Management Facilities

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 02/28/2022

Date Data Arrived at EDR: 02/28/2022

Date Made Active in Reports: 05/23/2022

Number of Days to Update: 84

Source: Department of Natural Resources

Telephone: 515-281-8801

Last EDR Contact: 05/31/2022

Next Scheduled EDR Contact: 09/12/2022

Data Release Frequency: Quarterly

## ***Lists of state and tribal leaking storage tanks***

LUST: Leaking Underground Storage Tank Data

Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state.

Date of Government Version: 02/24/2022

Date Data Arrived at EDR: 02/28/2022

Date Made Active in Reports: 05/24/2022

Number of Days to Update: 85

Source: Department of Natural Resources

Telephone: 515-281-6001

Last EDR Contact: 05/25/2022

Next Scheduled EDR Contact: 09/12/2022

Data Release Frequency: Quarterly

LAST: Leaking Aboveground Storage Tank Sites

A listing of leaking aboveground storage tank sites.

Date of Government Version: 04/11/2022

Date Data Arrived at EDR: 04/12/2022

Date Made Active in Reports: 07/06/2022

Number of Days to Update: 85

Source: Department of Natural Resources

Telephone: 515-281-6001

Last EDR Contact: 07/11/2022

Next Scheduled EDR Contact: 10/24/2022

Data Release Frequency: Quarterly

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### ***Local Brownfield lists***

#### **US BROWNFIELDS: A Listing of Brownfields Sites**

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Last EDR Contact: 07/06/2022  
Next Scheduled EDR Contact: 10/24/2022  
Data Release Frequency: Annually

### US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 02/22/2022  
Date Data Arrived at EDR: 02/23/2022  
Date Made Active in Reports: 05/10/2022

### SPILLS 90: SPILLS90 data from FirstSearch

Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

### Other Ascertainable Records

#### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

### SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

|                                         | Data Release Frequency: Annually       |

### SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

### RMP: Risk Management Plans

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

|                                         |                                         |

|                                         | Data Release Frequency: Varies          |

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

### HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006  
Date Data Arrived at EDR: 03/01/2007  
Date Made Active in Reports: 04/10/2007

Data Release Frequency: Varies

### UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 08/30/2019

### US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

### ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

### EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

#### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

### AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

### Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

### Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

### Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

### Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

### Daycare Centers: Child Care Facilities

Source: Department of Human Services

Telephone: 515-281-4357

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

### TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

### SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

### **FEMA FLOOD ZONE**

|                                             |                         |
|---------------------------------------------|-------------------------|
| <u>Flood Plain Panel at Target Property</u> | <u>FEMA Source Type</u> |
| 19127C0170C                                 | FEMA FIRM Flood data    |

### **NATIONAL WETLAND INVENTORY**

|                                    |                                                |
|------------------------------------|------------------------------------------------|
| <u>NWI Quad at Target Property</u> | <u>NWI Electronic Data Coverage</u>            |
| MARSHALLTOWN                       | YES - refer to the Overview Map and Detail Map |

### HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

|               |                 |                          |
|---------------|-----------------|--------------------------|
| <u>MAP ID</u> | <u>LOCATION</u> | <u>GENERAL DIRECTION</u> |
| Not Reported  | <u>FROM TP</u>  | <u>GROUNDWATER FLOW</u>  |

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

### **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### **GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

#### **ROCK STRATIGRAPHIC UNIT**

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

#### Soil Map ID: 1

Soil Component Name: Tama

Soil Surface Texture: silty clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information |           |           |                    |                                                                        |                                                                                    |                                              |                      |
|------------------------|-----------|-----------|--------------------|------------------------------------------------------------------------|------------------------------------------------------------------------------------|----------------------------------------------|----------------------|

### Soil Map ID: 3

Soil Component Name: Tama

Soil Surface Texture: silty clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

### LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

### WELL SEARCH DISTANCE INFORMATION

| <u>DATABASE</u>  | <u>SEARCH DISTANCE (miles)</u> |

## RADON

### AREA RADON INFORMATION

State Database: IA Radon

#### Radon Test Results

| Zipcode | Num Tests | Minimum | Maximum | Average |
|---------|-----------|---------|---------|---------|
| 50158   | 132       | 0.1     | 33.4    | 6.2     |

Federal EPA Radon Zone for MARSHALL County: 1

Note: Zone 1 indoor average level > 4 pCi/L.  
: Zone 2 indoor average level >= 2 pCi/L and <= 4 pCi/L.  
: Zone 3 indoor average level < 2 pCi/L.

Federal Area Radon Information for Zip Code: 50158

Number of sites tested: 8

| Area                    | Average Activity | % <4 pCi/L   | % 4-20 pCi/L | % >20 pCi/L  |
|-------------------------|------------------|--------------|--------------|--------------|
| Living Area - 1st Floor | 4.900 pCi/L      | 0%           | 100%         | 0%           |
| Living Area - 2nd Floor | Not Reported     | Not Reported | Not Reported | Not Reported |
| Basement                | 10.563 pCi/L     | 0%           | 100%         | 0%           |

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: National Wetland Inventory of Iowa

Source: Department of Natural Resources

Telephone: 319-335-1575

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### All Known Water Wells in the State of Iowa

Source: Department of Natural Resources

Telephone: 319-335-1353

Well types included are agricultural drainage, permitted private, public, registered abandoned, SDWIS public, water use permit sites, wells registered for testing.

#### Agricultural Drainage Wells

Source: Department of Natural Resources

Telephone: 515-281-5029

Agricultural drainage wells are required to be registered both with the Iowa Department of Natural Resources as a part of the 1987 Groundwater Protection Act, and with the U.S. Environmental Protection Agency as a part of the Underground Injection Control Program.

#### Private Well Tracking System Wells

Source: Department of Natural Resources

Telephone: 319-335-1353

#### Water Use Permits

Source: Department of Natural Resources

Telephone: 515-725-0336

Wells under Water Use permits. A water use permit is required of any person or entity that withdraws or diverts at least 25,000 gallons of water in a 24-hour period during any calendar year.

#### Private Wells Tested

Source: Department of Natural Resources

Telephone: 515-335-1353

This is a point coverage for private wells which have been tested for bacteria and nitrate contamination under the Grants to Counties program.

## OTHER STATE DATABASE INFORMATION

#### Oil and Gas Well Database

Source: Department of Natural Resources

Oil and gas well locations.

### RADON

#### State Database: IA Radon

Source: Department of Public Health

Telephone: 515-281-4340

Radon Test Results

## PHYSICAL SETTING SOURCE RECORDS SEARCHED

### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

### OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey

## **Appendix J – Qualifications of the Environmental Professionals**

## **QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS**

### **Jon Reis – *Senior Project Manager***

Mr. Jon Reis is an Environmental Professional with experience on a variety of environmental projects including: Phase I and II Environmental site assessments, EPA Brownfield projects, asbestos and lead based paint inspections, air quality investigations, and NEPA projects. Mr. Reis also has experience with wetland delineation projects and informal biological assessments. Mr. Reis received a master's degree in Geology and has conducted multiple soil and groundwater sampling events. Mr. Reis is 40-hour Hazardous Waste Operations and Emergency Response (HAZWOPER) certified, state of Minnesota wetland delineator certified, and currently holds an Iowa asbestos inspector's license, an Iowa lead inspector/risk assessor's license, and an Iowa DNR Certified Well Driller License.

### **Tyler Silverthorn – *Project Manager***

Mr. Tyler Silverthorn is an Environmental Professional with experience in Phase I Environmental Site Assessments and Geographic Information Systems. Mr. Silverthorn has completed ASTM 1527-13 compliant site reconnaissance field visits, reviewed local, state, and federal environmental databases, acquired and reviewed historical information, performed warranty deed and lien searches, completed interviews, and prepared Phase I ESA reports. He has experience in watershed management as well as collecting data using GPS equipment and forest measurement tools. Mr. Silverthorn has also assisted with the creation of aerial maps using ArcGIS.

### **Laurel Maier – *Environmental Specialist, Report Writer***

Ms. Laurel Maier is an Environmental Specialist with experience on a variety of projects including Phase I Environmental Site Assessments, Asbestos and Lead-based Paint inspections, and Environmental Health and Safety Assessments. Ms. Maier has completed ASTM 1527-13 compliant site reconnaissance field visits, reviewed local, state, and federal environmental databases, acquired and reviewed historical information, performed warranty deed and lien searched, completed interviews, and prepared Phase I ESA reports. Ms. Maier is currently certified as Lead Based Paint Inspector/Risk Assessor for the State of Iowa and is 40-hour Hazardous Waste Operations and Emergency Response (HAZWOPER) certified.

## 1.0 EXECUTIVE SUMMARY

The City of Marshalltown (City) is currently participating in the U.S. Environmental Protection Agency's (EPA) Brownfields Assessment Grant. The City identified the property located at 20 E Main Street, Marshalltown, IA 50158 (Figure 1, Appendix B) as a target for this Brownfields project. Hereinafter, this approximately 0.08-acre parcel (parcel number 8418-26-456-021) is referred to as the "Property." The objective of this Phase II Environmental Site Assessment (ESA) was to evaluate Recognized Environmental Conditions (RECs) identified in the August 30, 2022, Phase I ESA and to remove barriers to commercial or residential redevelopment of the Property. Impact7G, Inc. (Impact7G) was retained by the City to conduct a Phase II ESA per the September 26, 2022, Phase II ESA Work Plan (revised January 4, 2023) which was approved January 11, 2023. Field work consisting of soil sampling occurred on March 6, 2023.

### 1.1 Findings/Results

A total of two borings for soil/groundwater sampling were advanced on the Property using a track mounted, direct push Geoprobe® drill rig and logged for general geologic information. The intent of the Phase II ESA was to determine whether any contamination was present in soil, groundwater, or soil vapor from the historic use of nearby properties. Soil samples collected at the Property were analyzed for volatile organic compounds (VOCs), total extractable hydrocarbons (TEHs), Resource Conservation and Recovery Act (RCRA) 8 metals, and semi-volatile organic compounds (SVOCs). No groundwater or soil vapor samples were collected from the Property due to limitations discussed below and in Section 6.0.

The results of the Phase II ESA are summarized as follows:

- Laboratory analysis of the soil samples indicated arsenic soil concentrations exceed the Iowa Department of Natural Resources (IDNR) Statewide Standards (SWS) in boring SB-2. No additional RCRA 8 metal constituents were detected above the IDNR SWS, and no VOC, TEH, or SVOC constituents were detected above the laboratory's reporting limits.
- Groundwater was not encountered at either soil boring location; therefore, no groundwater samples were collected.
- Based on soil photoionization detector (PID) readings all recorded as non-detect (0.0 ppm), soil vapor implants were not installed and soil vapor samples were not collected from the Property.
- For the arsenic soil concentrations detected above the IDNR SWS, evaluation of its cumulative risk was conducted by utilizing the IDNR Cumulative Risk Calculator. According to the results, the Total Cancer Output was 0.19 for the Site Resident scenario and 0.04 for the Site Worker scenario. A cumulative cancer risk shown as a value less than or equal to 1.00 (a value of 1 being equivalent to a  $1 \times 10^{-4}$  cancer risk) represents an acceptable cumulative cancer risk for that exposure party. Therefore, the Cumulative Cancer Risk for the Site Worker and Site Resident exposure scenarios indicates no additional action is needed to address the observed contamination on the Property. For the Non-Cancer Output Table for soil, the summed values for each target organ for the Site Resident and Site Worker exposure scenarios were both less than 1.00. This indicates the Property also meets compliance with the non-cancer risk criterion.

## **1.2 Professional Opinion**

Based on the laboratory results compared to the applicable regulatory standards, combined with the results of the IDNR Cumulative Risk Calculator, it is the opinion of Impact7G that the detected soil contamination at the Property represents a minimal risk to human health and the environment and should not inhibit redevelopment of the Property. Therefore, no further investigation or remedial actions are recommended by Impact7G.

If the user of this Phase II ESA desires a determination from the IDNR as to whether these findings constitute a hazardous condition, a request for regulatory review, a copy of this report, and a copy of the Phase I ESA may be submitted to the IDNR Contaminated Sites Section for review. Impact7G's conclusions are rendered in accordance with generally accepted professional standards but are not to be construed as a guarantee or warranty as to the potential liability associated with environmental conditions at the site.

## **2.0 INTRODUCTION**

### **2.1 Purpose**

The objective of this Phase II ESA was to evaluate environmental impacts to the Property resulting from an oil service station with underground storage tanks, a garage/auto repair facility, and laundry facilities located at nearby properties. The data gathered during this assessment has been compared to the risk-based standards outlined in Iowa Administrative Code (IAC) 567 *Chapter 137: Iowa Land Recycling Program and Response Action Standards (IAC 137)* and the Tier 1 Levels in *IAC Chapter 135: Technical Standards and Corrective Action Requirements for Owners and Operators of Underground Storage Tanks (IAC 135)*. This assessment was intended to provide the Property owner with knowledge of environmental conditions of the soil, soil vapor, and groundwater at the Property in advance of proposed redevelopment.

### **2.2 Problem Statement**

Based on the previously completed Phase I ESA dated August 30, 2022, additional investigation of the property was recommended. Impact7G conducted a Phase II ESA on the Property on March 6, 2023, to explore possible environmental impacts to the soil, soil vapor, and groundwater at the Property. The Phase II ESA was conducted through analysis of soil samples. Deviations from the Phase II ESA Work Plan are presented in Section 6.0.

The EPA Brownfields Cooperative Agreement requires the environmental data collected to be of the appropriate type, quantity, and quality to support project decisions. Project data quality objectives (DQOs) were identified in the approved *Generic Quality Assurance Project Plan (QAPP)* dated June 30, 2022.

Evaluation of environmental impairment is conducted using the regulatory programs outlined in the Iowa Administrative Code (IAC). Evaluation of environmental impairment involves risk-based evaluation and response action through the voluntary Land Recycling Program (LRP) as set forth in IAC 567-137(457B) *Chapter 137: Iowa Land Recycling Program and Statewide Response Action Standards*. In the event that contamination is associated with USTs, IAC 137 defers to the evaluation criteria outlined in IAC 567-135(455B) *Chapter 35: Technical Standards and Corrective Action Requirements for Owners and Operators of Underground Storage Tanks*. For this Phase II ESA, soil and groundwater evaluations for public risk were conducted according to IAC 135 and IAC 137, depending on the source of contamination.

## **3.0 BACKGROUND**

The Property is located within the SW ¼ of the SE ¼ of Section 26, Township 84 North, Range 18 West. The latitude and longitude coordinates for the approximate center of the Property are 42° 2' 57.4" North and 92° 54' 43.3" West.

### **3.1 Site Characteristics**

The 0.08-acre Property is located in downtown Marshalltown and consists of a vacant commercial building. The Property is relatively flat.

### **3.2 Principal User**

The principal end user of project information will be the City of Marshalltown. Further reliance by others will be beyond the scope of the EPA Brownfields Assessment Grant. The City will make primary use of the data to aid in decision-making relative to considering

properties for redevelopment. The data will not be the sole nor final determinant in the positive or negative determination of feasibility for redevelopment. It is anticipated that a Phase II ESA evaluation done for preliminary assessment and feasibility for a property will be used as the basis for potential secondary phases of investigation and subsequent remedial actions. Funding for subsequent investigation and remediation by the City or other entities could be external to federal programs.

### **3.3 Summary of Previous Assessments**

Impact7G completed a Phase I ESA for the Property on August 30, 2022. The assessment identified the following RECs associated with the current/past use of the Property and adjoining properties. The RECs are summarized below:

- A nearby parcel to the north (7 E State Street), located approximately 285 feet north of the Property, was an oil service station with buried gas tanks in 1921. The tanks have few regulatory records associated with them, however, based on the proximity to the Property and the absence of any sort of investigation regarding closure of the tanks, the potential exists for this site to have contaminated the subsurface of the Property. The historic use of the nearby parcel as an oil service station which also contained underground storage tanks is considered to represent a REC to the Property.
- Two nearby parcels (24 & 26 N 1st Avenue), located approximately 230 feet northeast of the Property, were identified as a Chinese laundry and laundry facility in 1921 and 1931, respectively. It is unknown if the laundry facilities performed dry cleaning operations or used solvents. However, based on the absence of additional information, proximity to the Property and the up-gradient location, the historic use of nearby parcels as laundry facilities is considered to represent a REC to the Property.
- The adjoining property to the north across the alleyway (15-25 E State Street) was identified as an auto repair shop (1931) and auto repair and auto sales and service (1964). Auto repair shops typically involve the use of oils and solvents and generate waste consisting of used oils and solvents some of which contain heavy metals. Based on the former use and proximity to the Property, the adjoining property to the north is considered to represent a REC to the Property.

## **4.0 PHASE II ESA ACTIVITIES AND RESULTS**

On March 6, 2023, a total of two borings for soil/groundwater sampling (SB-1 and SB-2) were advanced using a track mounted, direct-push Geoprobe® drill rig with acetate liners. The two borings were placed along the perimeter of the Property, one at the sidewalk near Main Street south of the building and one at the north side (rear) of the building. See Figure 2 in Appendix A for boring locations.

The borings were logged for general geologic information including grain size, sorting, plasticity, moisture content, and color. Soil was collected at one-foot intervals from each boring and screened for the presence of VOCs using a PID. Soil samples were then collected from each boring at the depth exhibiting the highest PID reading. In the event of minimal PIDs (<10 ppm) or the absence of odor or visible staining, soil samples were collected from just above the perceived water level while boring.

Following completion of the soil borings, they were converted to temporary monitoring wells utilizing ¾-inch diameter slotted polyvinyl chloride (PVC) screen and solid PVC riser. As temporary monitoring well SB-1 was dry and located in a high traffic area, the well was properly abandoned in accordance with Chapter 567-39.8 of the Iowa Administrative Code following attempted sampling on March 6. The screened portion of temporary monitoring well SB-2 was packed with clean 12/20 gradation sand and the well was then sealed to the surface with hydrated granular bentonite to prevent surface water and groundwater mixing as the well was left overnight in an attempt to allow it to recharge so a groundwater sample could be collected. The following day on March 7, 2023, after no groundwater was observed in the well SB-2, it was properly abandoned in accordance with Chapter 567-39.8 of the Iowa Administrative Code.

#### 4.1 Soil Sampling

Soils encountered in the borings (SB-1 and SB-2) were generally silty clays and sand. Soil boring SB-1 was drilled to approximately 20 feet below ground surface (bgs) based on the presumed depth of the groundwater interface and soil boring SB-2 was drilled to approximately 15 feet bgs before auger refusal was encountered due to bedrock.

As all PID readings were <10 ppm and there was no visible soil staining or noticeable odors, soil samples from each boring were collected from the interval nearest the top of the perceived water table while boring. All samples were collected in laboratory provided sample containers, immediately placed on ice, and submitted to Eurofins Environment Testing for analysis under chain of custody protocol. Sample intervals for each boring and time of collection were documented. Soil borings logs are presented in Appendix D.

Soil samples from SB-1 and SB-2 were analyzed for VOCs (EPA Method 8260D), TEHs (Iowa Method OA-2), RCRA 8 metals (EPA Methods 6020B/7471B), and SVOCs (8270E). A duplicate soil sample was collected from SB-1 and analyzed for the same analytes as the SB-1 sample.

#### 4.2 Soil Analytical Results

Analytical results which exceed the laboratory's reporting limits are summarized in the following table. Complete analytical results can be found in Appendix C.

**Table 1 – Soil – RCRA 8 Metals (mg/kg)**

| Constituent | SB-1<br>17-20' | SB-2<br>9-12' | Dup-1<br>(SB-1 17-20') | Statewide Standard<br>for Soil |
|-------------|----------------|---------------|------------------------|--------------------------------|
| Arsenic     | <0.828         | <b>7.34</b>   | <0.899                 | 1.9                            |
| Barium      | <b>18.7</b>    | <b>141</b>    | <b>18.3</b>            | 15,000                         |
| Chromium    | <b>7.72</b>    | <b>16.2</b>   | <b>7.87</b>            | 190                            |
| Lead        | <b>2.96</b>    | <b>9.24</b>   | <b>2.81</b>            | 400                            |
| Mercury     | <0.0186        | <b>0.0238</b> | <0.0179                | 23                             |

**Bold** results indicate concentrations greater than laboratory reporting limits.

**Shaded** results indicate concentrations greater than IDNR Statewide Standards for soil.

Laboratory analysis of the soil samples indicated concentrations exceeded laboratory reporting limits for arsenic, barium, chromium, lead, and mercury. Arsenic exceeded the IDNR SWS in boring SB-2. No additional RCRA 8 metal constituents were detected above the IDNR SWS. For concentrations above the IDNR SWS, constituents and concentrations are shown on Figure 3 in Appendix A.

No VOC, TEH, or SVOC constituents were detected above the laboratory's reporting limits; therefore, no tables for these constituents have been provided.

#### **4.3 Groundwater Sampling**

Following the completion of soil sampling, the borings were converted to temporary monitoring wells and groundwater sampling was attempted on March 6 and 7, 2023. Prior to sampling activities, it appeared groundwater was encountered at approximately 10-11 feet bgs in SB-2. Based on topographic maps provided in the Phase I ESA and the proximity to Linn Creek, groundwater flow on the Property is assumed to generally flow to the south.

Groundwater samples were not collected due to absence of groundwater in borings SB-1 and SB-2.

#### **4.4 Soil Vapor Sampling**

Per a discussion with the City of Marshalltown EPA Brownfields Assessment Grant Project Manager after approval of the Phase II ESA Work Plan, the proposed soil vapor samples would only be collected if soil PID readings above 10 ppm were observed. As there were no PID readings above 10 ppm, soil vapor implants were not installed and soil vapor samples were not collected.

### **5.0 RISK EVALUATION**

567 IAC 137.10(7) specifies cumulative risk criteria that must be complied with to acquire a no further action certificate under the Iowa LRP. Cumulative risk is the summation of cancer and non-cancer risks, determined separately, based on exposure to multiple contaminants from the same medium and exposure of the same individual to contaminants in multiple media. Evaluation of cumulative risk is conducted using the cumulative risk calculator on the IDNR Contaminated Sites Section website. The cumulative risk calculator assesses risk to potentially exposed parties, based on three standard exposure scenarios, from multiple contaminants and multiple media (i.e., groundwater, soil, and air).

To evaluate compliance with the acceptable risk criteria, the cumulative concentrations of contaminants must meet standards limiting increased cancer and non-cancer health risk. The cumulative risk criteria are as follows:

- Cumulative cancer risk shall not exceed 1 in 10,000.
- Non-cancer health risk to the same target organ shall not exceed a cumulative Hazard Quotient of 1.

Determination of exposure point concentrations for the risk calculation can be accomplished using one of the following methods.

- The maximum value for each contaminant in each medium from multiple samples of each medium of concern.
- The 95% Upper Confidence Limit (95% UCL) of the mean contaminant concentration in each medium.

For the purposes of this evaluation, the maximum contaminant concentration in soil was used to evaluate risk associated with the potential exposure pathways. This evaluation was conducted using the Site Resident and Site Worker exposure scenarios for soil based on the potential future use of the Property. The Site Resident scenario is the most stringent criteria. A cumulative cancer risk shown as a value less than or equal to 1.00 (a value of 1 being equivalent to a  $1 \times 10^{-4}$  cancer risk) represents an acceptable cumulative cancer risk for that exposure party.

Unlike the Cumulative Cancer Risk Output, all values presented in the Non-Cancer Risk Output table are expressed as hazard quotients. A hazard quotient is the ratio of the contaminant concentration divided by the concentration below which no adverse health impact is expected. The hazard quotients for all chemicals for the specific media of concern (i.e. soil) are summed for each target organ and shown at the bottom of each non-cancer output box. The "Sum" value for each target organ must be less than or equal to 1.00 to achieve compliance with the cumulative non cancer risk criterion. Soil Cumulative Risk Calculator results are provided in Appendix E.

### **Soil**

According to the IDNR Cumulative Risk Calculator, the cumulative cancer risk was 0.19 for a Site Resident and 0.04 for a Site Worker. This indicates the Property meets compliance with the cumulative cancer risk criterion and no additional action is needed to address the observed soil contamination on the Property.

For the Non-Cancer Output Table for soil, the summed values for each target organ for the Site Resident and Site Worker exposure scenarios were all less than 1.00. This indicates the Property also meets compliance with the non-cancer risk criterion.

## **6.0 DEVIATIONS FROM SCOPE**

Three site-specific conditions warranted deviation from the proposed sampling plan.

- Groundwater was not encountered in any of the borings (within 20 feet bgs in SB-1 or within 15 feet bgs in SB-2), and therefore was not sampled.
- Three borings (SB-1, SB-2, and SB-3) were proposed as part of this Phase II ESA. However, it was determined in the field there was not enough room for SB-2 and SB-3 due to the locations of utilities and the building on the Property. Only one boring, SB-2, was advanced at the rear of the Property.
- Per a discussion with the City of Marshalltown EPA Brownfields Assessment Grant Project Manager after approval of the Phase II ESA Work Plan, the proposed soil vapor samples would only be collected if soil PID readings above 10 ppm were observed. As there were no PID readings above 10 ppm, soil vapor implants were not installed and soil vapor samples were not collected.

No additional site-specific conditions warranted deviation from the proposed sampling plan.

## 7.0 FINDINGS AND CONCLUSIONS

The results of the Phase II ESA are summarized as follows:

- Laboratory analysis of the soil samples indicates arsenic soil concentrations exceed the IDNR SWS in boring SB-2. No additional RCRA 8 metal constituents were detected above the IDNR SWS, and no VOC, TEH, or SVOC constituents were detected above the laboratory's reporting limits.
- Groundwater was not encountered at either soil boring location; therefore, no groundwater samples were collected.
- Based on soil PID readings all recorded as non-detect (0.0 ppm), soil vapor implants were not installed and soil vapor samples were not collected from the Property.
- For the arsenic soil concentrations detected above the IDNR SWS, evaluation of its cumulative risk was conducted by utilizing the IDNR Cumulative Risk Calculator. According to the results, the Total Cancer Output was 0.19 for the Site Resident scenario and 0.04 for the Site Worker scenario. A cumulative cancer risk shown as a value less than or equal to 1.00 (a value of 1 being equivalent to a  $1 \times 10^{-4}$  cancer risk) represents an acceptable cumulative cancer risk for that exposure party. Therefore, the Cumulative Cancer Risk for the Site Worker and Site Resident exposure scenarios indicates no additional action is needed to address the observed contamination on the Property. For the Non-Cancer Output Table for soil, the summed values for each target organ for the Site Resident and Site Worker exposure scenarios were both less than 1.00. This indicates the Property also meets compliance with the non-cancer risk criterion.

## 8.0 RECOMMENDATIONS

Based on the laboratory results compared to the applicable regulatory standards, combined with the results of the IDNR Cumulative Risk Calculator, it is the opinion of Impact7G that the detected soil contamination at the Property represents a minimal risk to human health and the environment and should not inhibit redevelopment of the Property. Therefore, no further investigation or remedial actions are recommended by Impact7G.

If the user of this Phase II ESA desires a determination from the IDNR as to whether these findings constitute a hazardous condition, a request for regulatory review, a copy of this report, and a copy of the Phase I ESA may be submitted to the IDNR Contaminated Sites Section for review. Impact7G's conclusions are rendered in accordance with generally accepted professional standards but are not to be construed as a guarantee or warranty as to the potential liability associated with environmental conditions at the site.

## 9.0 DATA VALIDATION AND USABILITY

Validation of the data collected during this assessment of the Property is included below.

### 9.1 *Representativeness*

All samples were collected in such a manner, and at locations identified in the Phase II ESA Work Plan, to accurately reflect the constituent concentrations in the media from which they were taken at the time of sampling. Sample locations were biased to focus efforts on areas of the Property with the greatest potential to be impacted by on-site and off-site environmental concerns.

Representativeness of the data was partially ensured by avoiding cross-contamination, adhering to standard sample handling and analytical procedures, and use of proper chain-of-custody documentation procedures. Per direction from the analytical laboratory, the trip blanks were not analyzed since we were not able to collect any groundwater samples.

One field duplicate for soil was collected and evaluated to assure samples were representative of the sampling point. Field duplicate analysis is included in Section 9.5.

### 9.2 *Comparability*

In order that one set of data may be compared with another, all analyses were performed by accepted EPA or state methods, and all analytical results were reported in similar concentration units and format.

### 9.3 *Completeness*

In order for a set of data to be utilized with confidence to make a decision, the data must be complete. The sampling design included the collection of samples from specific areas from within the Property most likely to have been impacted by on-site and off-site activities.

### 9.4 *Sensitivity*

Detection and quantification limits must be below the Statewide Standard action levels specified in IAC 137 for soil and groundwater data. The laboratory MDLs were below the Statewide Standards. Method specific laboratory MDLs were identified in Appendix E of the QAPP.

### 9.5 *Precision*

Precision is a measure of the variability of a measurement system. Precision was assessed through the collection and evaluation of field quality control samples. Precision is typically an estimate by means of duplicate measurements and is expressed in terms of relative percent difference (RPD). The goal for precision of field duplicate results is ±35 percent RPD for soil samples, ±20 percent RPD for water samples, and ±50 percent RPD for soil vapor samples.

The relative percent difference (RPD) between the primary and corresponding duplicate sample will be calculated using the below formula.

$$RPD = \left[ \frac{2 \times (C_1 - C_2)}{(C_1 + C_2)} \right] \times 100$$

where: *RPD* = Relative percent difference

*C*<sub>1</sub> = Larger of the two observed measurement values

*C*<sub>2</sub> = Smaller of the two observed measurement values

A duplicate soil sample was taken at SB-1. The RPD between the original soil sample and the duplicate sample are identified in the following table.

**Table 2: Relative Percent Difference – Soil (mg/kg)**

| Location         | Contaminant | Sample Concentration | Duplicate Concentration | RPD  |
|------------------|-------------|----------------------|-------------------------|------|
| SB-1 & Duplicate | Barium      | 18.7                 | 18.3                    | 2.16 |
|                  | Chromium    | 7.72                 | 7.87                    | 1.92 |
|                  | Lead        | 2.96                 | 2.81                    | 5.20 |

No RPD values were outside of the respective goals for soil. Regarding constituent RPD variability for soils, samples are obtained as a “grab,” rather than a “composite” sample. Therefore, grab samples are more heterogeneous (i.e. more variable) when compared to the homogeneous composite sample. Best efforts are made to minimize the heterogeneous nature of soil samples while in the field; however, these samples are still significantly heterogeneous.

#### **9.6 Accuracy**

Proposed trip blanks, field duplicates, and equipment rinsate samples were used to evaluate the purity of sample containers, chemical preservatives, and sampling equipment. All sampling and analytical activities were conducted in accordance with EPA approved methods or industry standard practices.

## 10.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Qualifications of the Environmental Professionals responsible for this report are included in Appendix A. Signatures of the professionals responsible for this report:

Jacob Schnur, Environmental Specialist I, Field Services and Report Preparer

Jon Reis, Senior Project Manager, Quality Assurance / Quality Control

Megan Down, Project Manager, Quality Control / Quality Assurance

## **APPENDIX A**

### **Qualifications**

## **QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS**

### ***Jon Reis – Senior Project Manager, Report Preparer***

Mr. Jon Reis is an Environmental Professional with experience on a variety of environmental projects including: Phase I and II environmental site assessments, EPA Brownfield projects, asbestos and lead based paint inspections, air quality investigations, and NEPA projects. Mr. Reis also has experience with wetland delineation projects and informal biological assessments. Mr. Reis received a Master's Degree in Geology and has conducted multiple soil and groundwater sampling events. Mr. Reis is 40-hour Hazardous Waste Operations and Emergency Response (HAZWOPER) certified, state of Minnesota wetland delineator certified, and currently holds an Iowa asbestos inspector's license, an Iowa lead inspector/risk assessor's license, and an Iowa DNR Certified Well Driller License.

### ***Megan Down – Project Manager, Quality Assurance/Quality Control***

Ms. Megan Down is an Environmental Professional with experience in Phase I and Phase II Environmental Site Assessments. Ms. Down has completed ASTM 1527-13 compliant site reconnaissance field visits, reviewed local, state, and federal environmental databases, acquired and reviewed historical information, performed warranty deed and lien searches, completed interviews, collected soil and groundwater samples, and prepared Phase I and Phase II ESA reports. Ms. Down has extensive experience managing the investigation, remediation, and reporting of numerous Leaking Underground Storage Tank (LUST) sites, including but not limited to: Risk Based Corrective Action investigations (Tier 1/2/3 Site Cleanup Reports, Site Monitoring Reports), free product removal technologies, Corrective Action Design Reporting (CADR), chemical oxidation injection remediation, laser induced fluorescence (LIF) plume definition, soil excavation, and emergency spill response management and reporting. Ms. Down is 40-hour Hazardous Waste Operations and Emergency Response (HAZWOPER) certified and is an Iowa Certified Groundwater Professional.

## JOB DESCRIPTION

20 E. Main St.-Marshalltown

## JOB NUMBER

310-250853-1

# Eurofins Cedar Falls

## Job Notes

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to the NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory. This report is confidential and is intended for the sole use of Eurofins Environment Testing North Central, LLC and its client. All questions regarding this report should be directed to the Eurofins Environment Testing North Central, LLC Project Manager who has signed this report.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing North Central, LLC Project Manager.

## Authorization

# Case Narrative

Client: Impact7G, Inc  
Project/Site: 20 E. Main St.-Marshalltown

Job ID: 310-250853-1

## Job ID: 310-250853-1

### Laboratory: Eurofins Cedar Falls

#### Narrative

#### Job Narrative 310-250853-1

#### Comments

No additional comments.

#### Receipt

The samples were received on 3/7/2023 4:10 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 6.0° C.

#### GC/MS VOA

Method 8260D: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 310-380871 and analytical batch 310-380872 recovered outside control limits for the following analytes: m&p-Xylenes and Toluene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC/MS Semi VOA

Method 8270E: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 310-380892 and analytical batch 310-381339 recovered outside control limits for the following analyte: 2,4-Dinitrophenol. 2,4-Dinitrophenol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

Method 8270E: The following samples were diluted due to the nature of the sample matrix: SB-1 17ft-20ft (310-250853-1), SB-2 9ft-12ft (310-250853-2), Dupe-1 (310-250853-3), (310-250853-B-1-A MS) and (310-250853-B-1-B MSD). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### GC Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

## Qualifiers

### GC/MS VOA

| Qualifier | Qualifier Description                                                                                          |
|-----------|----------------------------------------------------------------------------------------------------------------|
| *+        | LCS and/or LCSD is outside acceptance limits, high biased.                                                     |
| J         | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

### GC/MS Semi VOA

| Qualifier | Qualifier Description                                                                                          |
|-----------|----------------------------------------------------------------------------------------------------------------|
| *-        | LCS and/or LCSD is outside acceptance limits, low biased.                                                      |
| F2        | MS/MSD RPD exceeds control limits                                                                              |
| J         | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

## Glossary

| Abbreviation   | These commonly used abbreviations may or may not be present in this report.                                 |
|----------------|-------------------------------------------------------------------------------------------------------------|
| α              | Listed under the "D" column to designate that the result is reported on a dry weight basis                  |
| %R             | Percent Recovery                                                                                            |
| CFL            | Contains Free Liquid                                                                                        |
| CFU            | Colony Forming Unit                                                                                         |
| CNF            | Contains No Free Liquid                                                                                     |
| DER            | Duplicate Error Ratio (normalized absolute difference)                                                      |
| Dil Fac        | Dilution Factor                                                                                             |
| DL             | Detection Limit (DoD/DOE)                                                                                   |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC            | Decision Level Concentration (Radiochemistry)                                                               |
| EDL            | Estimated Detection Limit (Dioxin)                                                                          |
| LOD            | Limit of Detection (DoD/DOE)                                                                                |
| LOQ            | Limit of Quantitation (DoD/DOE)                                                                             |
| MCL            | EPA recommended "Maximum Contaminant Level"                                                                 |
| MDA            | Minimum Detectable Activity (Radiochemistry)                                                                |

# Surrogate Summary

Client: Impact7G, Inc  
Project/Site: 20 E. Main St.-Marshalltown

Job ID: 310-250853-1

## Method: 8260D - Volatile Organic Compounds by GC/MS

Matrix: Solid

Prep Type: Total/NA

### Percent Surrogate Recovery (Acceptance Limits)

| Lab Sample ID      | Client Sample ID   | BFB<br>(78-120) | DBFM<br>(80-131) | TOL<br>(80-120) |
|--------------------|--------------------|-----------------|------------------|-----------------|
| 310-250853-1       | SB-1 17ft-20ft     | 100             | 107              | 96              |
| 310-250853-2       | SB-2 9ft-12ft      | 105             | 111              | 102             |
| 310-250853-3       | Dupe-1             | 101             | 106              | 98              |
| LCS 310-380871/2-A | Lab Control Sample | 101             | 101              | 101             |
| MB 310-380871/1-A  | Method Blank       | 97              | 105              | 97              |

#### Surrogate Legend

BFB = 4-Bromofluorobenzene (Surr)

DBFM = Dibromofluoromethane (Surr)

TOL = Toluene-d8 (Surr)

## Method: 8270E - Semivolatile Organic Compounds (GC/MS)

Matrix: Solid

Prep Type: Total/NA

### Percent Surrogate Recovery (Acceptance Limits)

| Lab Sample ID      | Client Sample ID   | FBP<br>(26-114) | 2FP<br>(23-111) | NBZ<br>(19-117) | PHL<br>(25-112) | TPHL<br>(31-124) | TBP<br>(11-111) |
|--------------------|--------------------|-----------------|-----------------|-----------------|-----------------|------------------|-----------------|
| 310-250853-1       | SB-1 17ft-20ft     | 79              | 83              | 80              | 83              | 88               | 61              |

# QC Sample Results

Client: Impact7G, Inc  
Project/Site: 20 E. Main St.-Marshalltown

Job ID: 310-250853-1

## Method: 8270E - Semivolatile Organic Compounds (GC/MS) (Continued)

Lab Sample ID: 310-250853-1 MSD

Matrix: Solid

Analysis Batch: 381339

Client Sample ID: SB-1 17ft-20ft

Prep Type: Total/NA

Prep Batch: 380892

# Accreditation/Certification Summary

Client: Impact7G, Inc  
Project/Site: 20 E. Main St.-Marshalltown

Job ID: 310-250853-1

## Laboratory: Eurofins Cedar Falls

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

| Authority | Program | Identification Number | Expiration Date |
|-----------|---------|-----------------------|-----------------|
| Iowa      | State   | 007                   | 12-01-23        |

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

| Analysis Method | Prep Method | Matrix | Analyte                |
|-----------------|-------------|--------|------------------------|
| 8260D           | 5035        | Solid  | 1,2,3-Trichlorobenzene |
| 8260D           | 5035        | Solid  | 1,2,4-Trichlorobenzene |
| 8260D           | 5035        | Solid  | Bromobenzene           |
| 8260D           | 5035        | Solid  | Hexane                 |
| 8260D           | 5035        | Solid  | p-Isopropyltoluene     |
| 8260D           | 5035        | Solid  | sec-Butylbenzene       |
| 8260D           | 5035        | Solid  | tert-Butylbenzene      |
| 8270E           | 3546        | Solid  | Benzoic acid           |
| 8270E           | 3546        | Solid  | Pyridine               |
| 8270E           | 3546        | Solid  | Total Cresols          |

| Question                                                                                 | Answer | Comment |
|------------------------------------------------------------------------------------------|--------|---------|
| Radioactivity wasn't checked or is $\leq$ background as measured by a survey meter.      | N/A    |         |
| The cooler's custody seal, if present, is intact.                                        | N/A    |         |
| Sample custody seals, if present, are intact.                                            | N/A    |         |
| The cooler or samples do not appear to have been compromised or tampered with.           | True   |         |
| Samples were received on ice.                                                            | True   |         |
| Cooler Temperature is acceptable.                                                        | True   |         |
| Cooler Temperature is recorded.                                                          | True   |         |
| COC is present.                                                                          | True   |         |
| COC is filled out in ink and legible.                                                    | True   |         |
| COC is filled out with all pertinent information.                                        | True   |         |
| Is the Field Sampler's name present on COC?                                              | True   |         |
| There are no discrepancies between the containers received and the COC.                  | True   |         |
| Samples are received within Holding Time (excluding tests with immediate HTs)            | True   |         |
| Sample containers have legible labels.                                                   | True   |         |
| Containers are not broken or leaking.                                                    | True   |         |
| Sample collection date/times are provided.                                               | True   |         |
| Appropriate sample containers are used.                                                  | True   |         |
| Sample bottles are completely filled.                                                    | True   |         |
| Sample Preservation Verified.                                                            | True   |         |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs         | True   |         |
| Containers requiring zero headspace have no headspace or bubble is $<6\text{mm}$ (1/4"). | True   |         |
| Multiphasic samples are not present.                                                     | True   |         |
| Samples do not require splitting or compositing.                                         | True   |         |
| Residual Chlorine Checked.                                                               | N/A    |         |

Tyler R Silverthorn  
600 4th Street SUITE 808  
Sioux City, IA 51101

Dear Tyler R Silverthorn

The department has reviewed the information you submitted and determined that you have met the requirements for certification in the state of Iowa as a Lead Inspector/Risk Assessor. Your certification number is: LEAD-INSP10031.

Your certification will expire on September 18, 2026. By that date, you must renew your certification in order to perform any lead professional certification activities. To renew your certification, you will need to have completed the appropriate refresher course. Refresher courses are valid if taken within 3-years from the date that you renew.

Please keep a copy of your certification on your person or in an easily retrievable area at the work site. If you submitted your application online or with a valid email address, the certification is being provided to you electronically. You may choose to either print these documents or have them available on your phone or other electronic device for display if requested.

You can find the certification requirements and work practice standards for all lead professionals in Iowa Administrative Code 641 - Chapter 70, which is at: <http://www.idph.iowa.gov/LPP> under "Resources". You **must** be currently certified to perform work that requires certification.

## APPENDICES

APPENDIX A – LBP Positive Summary Table

APPENDIX B – LBP Positive Summary Map(s)

APPENDIX C – Lead-Based Paint Inspection Report

APPENDIX D – Lead-Based Paint Interim Control/Abatement Cost Estimate

## **1.0 BACKGROUND**

### **1.1 Introduction**

The purpose of this document is to achieve lead safe conditions on both interior and exterior surfaces at the property listed. When applicable, work resulting in disturbance of lead-based paint (LBP) must be completed abiding by all applicable local, state, and federal regulations, laws, or standards. LBP disturbance will require specific adherence to worker protection standards and waste disposal standards. This LBP Disturbance Requirements document details the standards that need to be followed based on the end result of any proposed redevelopment and purpose for LBP disturbance.

### **1.2 Regulations**

29 CFR 1926 Safety and Health Regulations for the Construction Industry

40 CFR 260 Hazardous Waste Management System: General

40 CFR 261 Identification and Listing of Hazardous Waste

40 CFR 262 Standards Applicable to Generators of Hazardous Waste

40 CFR 263 Standards Applicable to Transporters of Hazardous Waste

40 CFR 264 Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities

40 CFR 265 Interim Status Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities

40 CFR 745 Lead-Based Paint Poisoning in Certain Residential Structures

IAC 641 – Chapter 69 Renovation, Remodeling, and Repainting – Lead Hazard Notification Process

IAC 641 – Chapter 70 Lead-Based Paint Activities

### **1.3 Certifications**

If the end result of an area within the structure will be residential, the contractor, and/or firm disturbing LBP, must follow certification requirements listed in IAC 641 – Chapter 70. The firm selected must be an Iowa Lead Firm. The residential area includes any common areas that are used to access the residential portion of the building such as entryways, hallways, and stairways. Common areas associated with residential uses can also include, but are not limited to laundry rooms, day rooms, and/or lounge areas.

If the residential areas are to be renovated, the firm must have an Iowa Licensed Lead Safe Renovator assigned to the project. All unlicensed workers, unless specified by the funding source to also have a Lead Safe Renovator license, will be trained on the job in lead safe work practices.

If the residential areas are to have lead abatement conducted, the firm must designate an Iowa Licensed Abatement Contractor to oversee the project. All workers must be Iowa Licensed Lead Abatement Workers.

Unless otherwise required by the funding source, areas of the building that will not be residential as an end result, IAC 641 – Chapter 70 does not apply. Therefore, renovations and/or abatement that disturbs LBP in non-residential areas is not required to be conducted by an Iowa Licensed Lead Firm, Lead Safe Renovator, Lead Abatement Contractor, and/or Lead Abatement Workers. All other OSHA and Hazardous Waste Regulation apply.

### **1.4 Pre-Renovation Notification**

If residential areas will be renovated, a standard notification must be provided to the owner and/or occupants in accordance with IAC 641 – Chapter 69.

### **1.5 Abatement Notification**

If residential areas will be abated, an abatement notification must be completed in accordance with IAC 641 – Chapter 70.

### **1.6 OSHA 29 CFR 1926.62**

All aspects of OSHA's Lead in Construction Standard are applicable during the project. This includes but is not limited to medical surveillance, training, exposure monitoring, respiratory protection, personal protective equipment (PPE), safe work practices, hygiene facilities, containment, signage, hazard communication, and record keeping.

### **1.7 Competent Person**

The contractor must have a person on-site that meets the requirements of a competent person for 29 CFR 1926.62 and IAC 641 – Chapters 69 and 70.

### **1.8 Signage**

In accordance with 29 CFR 1926.62, warning signs must be posted and visible from all angles of approach to the work area. Warning signs must state:

DANGER  
LEAD WORK AREA  
MAY DAMAGE FERTILITY OR THE UNBORN CHILD  
CAUSES DAMAGE TO THE CENTRAL NERVOUS SYSTEM  
DO NOT EAT, DRINK OR SMOKE IN THIS AREA

If work clothing or equipment are to be cleaned off-site, containers used to transport must be labeled with the following:

DANGER: CLOTHING AND EQUIPMENT CONTAMINATED WITH LEAD. MAY  
DAMAGE FERTILITY OR THE UNBORN CHILD. CAUSES DAMAGE TO THE  
CENTRAL NERVOUS SYSTEM. DO NOT EAT, DRINK OR SMOKE WHEN  
HANDLING. DO NOT REMOVE DUST BY BLOWING OR SHAKING. DISPOSE OF  
LEAD CONTAMINATED WASH WATER IN ACCORDANCE WITH APPLICABLE  
LOCAL, STATE, OR FEDERAL REGULATIONS.

### **1.9 Containment**

The use of containment during the disturbance of LBP is required during renovation and/or abatement activities in residential and non-residential areas of the structure. Containment must be adequate to contain paint chips, dust, and debris from contaminating locations that are outside of the work area.

### **1.10 Cleaning**

Daily cleaning must be completed to prevent the spread of dust and debris throughout the work area. The accumulation of paint chips and dust must be kept to a minimum and will be removed at the end of each work shift. Work areas will be HEPA vacuumed and wet cleaned daily. No dry sweeping or use of compressed air is allowed.

### **1.11 Waste Removal and Disposal**

All discarded materials and construction debris shall be removed from the job site in a timely manner. Lead wastes must be wrapped and/or bagged and sealed prior to removal and contained to prevent release of dust and debris before the waste is removed from the work area for disposal. All lead waste, including dust, debris, paint chips, protective sheeting, HEPA filters, dirty water, cloths, mop heads,

protective clothing, respirator cartridges, gloves, etc. shall be collected in heavy plastic sheeting or bags. The bags or sheeting shall be securely sealed.

Lead wastes must be characterized in accordance with 40 CFR 261 using the Toxicity Characteristic Leaching Procedure (TCLP). Paint chips and associated waste shall be containerized, labeled, and segregated until TCLP testing has been completed. Any debris generated from the renovation and/or abatement must be cleaned using a vacuum with a HEPA filter which follows the procedures that prevents the release of lead dust. Contractor must maintain laboratory TCLP analytical results and waste manifest records to provide to City upon request. The waste disposal location may also request laboratory TCLP analytical results.

### **1.12 Craftsmanship**

At all times it is expected that normal finish-carpentry skills will be used. This includes but is not limited to: sanding of new wood, finishing of edges, etc... to obtain smooth cleanable surfaces prior to sealing with paint, stain, etc.

As components are replaced (example: window stops) the component should be removed by first misting with water and scoring the paint between the component being replaced and any adjacent component. This will minimize the creation of another hazard in the attempt to remove a hazard.

If workers damage a component while replacing another, replace the damaged component. (Example: You are removing a window but leaving the sill. During the process of removing the window the sill cracks or breaks. You must re-build or sufficiently repair the sill.)

Unless directed otherwise in the written specifications, always provide one coat primer and two coats finish topcoat or stain and two coats of polyurethane or lacquer. The relocation of tenants might not occur until all materials have been delivered to the job site and verified with staff (windows, siding, lumber etc.).

## **2.0 ABATEMENT**

### **2.1 General Note**

At no point is it acceptable, without documentation to the contrary, to utilize "used" components. All materials provided must be new.

### **2.2 Enclosures**

All enclosures must include replacing deteriorated substrates. Prior to enclosure, the component to be enclosed must be permanently labeled: Danger Lead-Based Paint.

All enclosures must be mechanically fastened and caulked. With stair treads, unless directed otherwise in the specifications, treads must be completely enclosed including the lead edge (nose) of each tread.

Floors calling for enclosure must include a minimum of 3/4" quarter round installed on all edges. Exception will be in doorways where a suitable transition must be provided to minimize trip hazards.

All enclosures must be mechanically fastened and back caulked so that one cannot peel back the enclosure and reveal the substrate below. Example: window and door trim must be sufficiently anchored and caulked. Caulking on windows, doors, coil stock enclosures must also have visible

caulking on the exterior generously applied and wiped smooth to ensure all voids are filled. Wiping smooth allows another party at a later date to paint the caulk line. Caulking in this instance must be paintable caulking. Applying fasteners every 18"-24" or more will not satisfy this requirement.

When enclosing surfaces with coil stock the contractor must enclose and back caulk. Where possible 90-degree bends providing rigidity and eliminating "bowing" of coil stock should be used.

Interior surfaces, including the interior of a porch that call for enclosing a surface, (example: a door jamb), should have a solid wood material used for the enclosure.

A drawing will be created that notes the locations and materials that are enclosed to be provided for future building maintenance activities.

### **2.3 Masonry Treatments**

When enclosing concrete surfaces using metal lath and mortar mix the contractor must apply a "scratch coat" using a 1/4" x 1/4" x 1/4" trowel. The scratch coat enables the second coat to adhere. Total thickness of both coats must be a minimum of 1" thick. Periods of below freezing overnight temperatures are not acceptable conditions for applying masonry mortar without a pre-approved additive to the masonry mortar mix.

Processes must include repairing/replacing deteriorated substrates.

### **2.4 Component Removal and Replacement**

As components are replaced such as, but not limited to, baseboards, casings, jambs, stools, thresholds, horizontal trim, precautions (misting and scoring) should be utilized in planning the removal of the component so as to minimize damage to the adjacent wall/ceiling/floor. Repairs may include, but are not limited to, application of drywall compound in phases to minimize shrinkage, matching the kind of finish on the adjacent wall. If it is a smooth surface, the drywall compound will be sanded smooth. If there is a textured surface, the contractor will provide texture to match. At no time will caulking be acceptable as an interior finish treatment.

The City of Marshalltown has adopted the IRC (International Residential Code) 2012 egress window requirement. All dwelling units must have at least one egress window (maintaining 5.7 sq. ft. of open area per fire code) in each sleeping room (measuring actual open area with the bottom sash open). For casement windows the minimum width and or height shall be measure with the window in the fully opened position (90-degree). This condition will apply to all sleeping rooms.

Windows intended for interior applications, regardless of their industry standard ratings, shall not have visible gaps in any part of the window that would allow air, light, or moisture to pass to the interior.

For rental properties only, the requirement for safety glazing on windows where the exposed edge of glass is less than 18 inches from the floor shall be observed.

When replacing exterior doors, if the storm door is removed during the removal or installation of the new door, re-install the storm door upon completion of the installation unless specifications dictate otherwise.

If while replacing a door, or window, a surface is revealed (example: siding or jambs) the contractor must enclose those surfaces even if they are not addressed in the specifications.

## **2.5 Paint Removal**

Contractor must provide a smooth surface after doing paint removal prior to priming.

If paint removal is used such as stripping paint from a component, a photo must be taken for documentation that all paint is removed prior to repainting. If a Clearance Inspection will be conducted after residential abatement work, all paint removal will be completed and visually assessed by an Iowa Licensed Lead Inspector/Risk Assessor prior to repainting.

## **3.0 INTERIM CONTROLS**

### **3.1 Paint Stabilization**

Paint Stabilization includes repairing/replacing deteriorated substrates prior to additional wet scraping and painting.

Paint stabilization must include wet scraping techniques to remove loose paint from the substrate. Wet scraping includes misting and/or sufficiently wetting the substrate to limit the release of dust when scraping. The entire component must be primed and repainted. No “spot painting” is allowed.

Baseboards calling for paint stabilization, unless directed otherwise in the specifications, must include as an impact guard, a base shoe provided that is a minimum of  $\frac{3}{4}$ ” quarter round. Where there is a 90-degree surface  $\frac{3}{4}$ ” outside corner stock must be used. In the absence of 90-degree corners, fabricated impact guards must be employed using knot free wood. If and when 1” quarter round is to be replaced, a fabricated piece of stock must be employed to cover the “footprint” of the 1” quarter round. The  $\frac{3}{4}$ ” quarter round is to be then installed over the fabricated 1” enclosure.

When priming bare wood, a sufficient number of coats must be applied to completely cover the substrate.

Special attention to indoor and outdoor temperatures when painting. Painting must be completed per manufacturers instructions for the paint being used.

## **4.0 COMPLETION OF LEAD SAFE RENOVATION OR LEAD ABATEMENT**

### **4.1 Post Renovation Cleaning Verification**

If the residential areas (including common areas) are renovated, the Lead Safe Renovator will complete the Post Renovation Cleaning Verification. The Post Renovation Cleaning Verification, including any additional cleaning due to failures, will be completed in accordance with IAC 641 – Chapter 70. A visual assessment will be completed by the Lead Safe Renovator. Photographic documentation must be completed to identify the conditions during the visual assessment. Upon a passing visual assessment, wipe sampling will be completed by the Lead Safe Renovator and compared to the cleaning verification card. Photographic documentation will be completed to document the wipe samples in relation to the card.

### **4.2 Clearance Testing**

If lead abatement is completed in a residential area (including common areas), Clearance Testing is required. The contractor must coordinate with the Lead Inspector/Risk Assessor at least 10 days in advance to schedule the Clearance Testing. Clearance Testing will be completed in accordance with IAC 641 – Chapter 70 prior to the areas being occupied by unlicensed workers and/or occupied by residents.

The Lead Inspector/Risk Assessor will complete a visual assessment to ensure all work was completed satisfactorily and that no dust or debris remains. Upon successful completion of the visual assessment, dust wipes will be collected from various floors, sills, and troughs as determined by the Lead Inspector/Risk Assessor. The dust samples will be sent under chain of custody to a National Lead Laboratory Accreditation Program (NLLAP) laboratory. Dust wipes must be below the respective clearance/hazard thresholds for floors, sill, and trough of 10 µg/ft<sup>2</sup>, 100 µg/ft<sup>2</sup>, and 400 µg/ft<sup>2</sup>.

Should the visual assessment or dust wipe sampling fail, the contractor is responsible for any additional work and/or cleaning at no additional cost.

Upon passing of the visual assessment and dust wipe clearance testing, all containments and signage may be removed.

A report will be completed by the Lead Inspector/Risk Assessor and provided to the Abatement Contractor within 3 weeks of receiving laboratory results and passing clearance testing.

The Abatement Contractor is responsible for including the Clearance Testing Report from the Inspector/Risk Assessor in the Abatement Report. The Abatement Contractor must provide the owner with the Abatement Report within 4 weeks of passing the Clearance Testing.

## 5.0 POSITIVE LBP COMPONENTS

A Lead-Based Paint Inspection of the property was completed on April 24, 2023. The below table identifies the positive LBP components detected at the property and lists the associated LBP locations. Interim control and abatement control options are also summarized.

| Component            | Location                                                             | Interim Controls Options                                              | Abatement Control Options        |
|----------------------|----------------------------------------------------------------------|-----------------------------------------------------------------------|----------------------------------|
| Ceiling              | 1 <sup>st</sup> Floor Room 1;<br>Mezzanine Rooms 7, 8,<br>Restroom 2 | Paint stabilization and then apply<br>two coats of high quality paint | Enclose or replace<br>components |
| Wall                 | 1 <sup>st</sup> Floor Room 2;<br>2 <sup>nd</sup> Floor Room 15       | Paint stabilization and then apply<br>two coats of high quality paint | Enclose or replace<br>components |
| Floor                | 1 <sup>st</sup> Floor Room 2                                         | Paint stabilization and then apply<br>two coats of high quality paint | Enclose or replace<br>components |
| Window<br>Components | 1 <sup>st</sup> Floor Room 3;<br>2 <sup>nd</sup> Floor Rooms 11, 12  | Paint stabilization and then apply<br>two coats of high quality paint | Enclose or replace<br>components |
| Wall Trim            | Mezzanine Room 8                                                     | Paint stabilization and then apply<br>two coats of high quality paint | Enclose or replace<br>components |
| Door<br>Components   | 2 <sup>nd</sup> Floor Room 15                                        | Paint stabilization and then apply<br>two coats of high quality paint | Enclose or replace<br>components |
| Chair Rail           | 2 <sup>nd</sup> Floor Room 12                                        | Paint stabilization and then apply<br>two coats of high quality paint | Enclose or replace<br>components |

## 5.1 Inspection Limitations

The following Inspection limitations were encountered during the April 2023 Inspection.

| Location/Area | Component                                | Reason       |
|---------------|------------------------------------------|--------------|
| Exterior      | 2 <sup>nd</sup> Story Roof, Upper Fascia | Inaccessible |

## **APPENDIX A – LBP Positive Summary Table**

## APPENDICES

APPENDIX A – Qualifications  
APPENDIX B – Laboratory Reports / Chain of Custody Documentation  
APPENDIX C – Photographs  
APPENDIX D – LBP Positive Summary Map(s)  
APPENDIX E – Definitions and Key Units of Measure

***NOTE: If the Property, or portion of the Property, is converted to residential, a complete copy of this report must be provided to new lessees (tenants) and purchasers of this property under federal law (24 CFR part 35 and 40 CFR part 745) and state law (IAC 641 Chapter 70) before they become obligated under a lease or sales contract. Landlords (lessors) and sellers are also required to distribute an educational pamphlet approved by the State of Iowa and include standard warning language in their leases or sale contracts to ensure that parents have the information they need to protect children from lead-based paint hazards.***

## **1.0 EXECUTIVE SUMMARY**

Impact7G, Inc. (Impact7G), completed a Lead-Based Paint (LBP) Inspection on April 24, 2023, of the existing commercial building located at 20 E Main Street, Marshalltown, Iowa 50158 (Property). The purpose of the Inspection is to document the presence of LBP within the building and assist the City of Marshalltown (Client) in facilitating renovation activities.

### **Lead Based Paint**

Please refer to the following pages for a list of identified painted surfaces containing LBP.

LBP was identified in twenty-two (22) of the one hundred seventy-one (171) samples taken from the property. These components include ceilings, walls, floors, window components, wall trim, door components, and a chair rail. The location of each LBP sample is listed in the table below and shown on the Positive Summary Maps in Appendix D.

### **1.1 Recommendations**

While abatement/removal of LBP components is not required by the Iowa Department Natural Resources (IDNR) prior to demolition, a waste determination is required for components containing lead that will be removed and disposed. Iowa Occupational Safety and Health (IOSH) may require additional personal protective equipment (PPE) be used if these materials are left in the structure during demolition and/or renovation activities.

Based on the presence of LBP throughout the Property, lead-safe work practices should be utilized during renovation activities. Options for mitigating lead hazards are abatement by removal, enclosure, encapsulation, or series of interim controls to manage LBP in place. In general, interim control options will likely be less expensive than abatement control options but will require the development of a management plan. Abatement control options do not require such a plan. Impact7G recommends that the identified LBP components be remediated in accordance with applicable Federal, State and Local Regulations.

It should be noted that lead concentrations (in paint) that are less than the levels that identify a surface coating as LBP still have the potential of causing lead poisoning. Should these or any potential LBP painted component and/or surface be disturbed in any manner that generates dust, extreme care must be taken to limit its spread. Any renovation or remodeling work can disturb paint, which may create a hazardous condition. As long as there is lead-based paint present in the structure, there is a potential for a hazardous condition.

If areas with LBP components will remain, Impact7G recommends establishing an Operations & Maintenance (O&M) program. The O&M program should at a minimum consist of training, cleaning, work practices, monitoring, and recordkeeping to maintain these materials in good condition. Additional details on establishing an O&M program are discussed in Section 6.0 of this report.

This report is designed to aid the building owner, architect, construction manager, general contractor, and/or remediation contractor in locating LBP. This report is not to be used as abatement specifications, as it does not contain needed components to serve as such.

## 2.0 INTRODUCTION

### A. Property Information

Location:

Commercial Building  
20 E Main Street  
Marshalltown, Iowa 50158

Contact Person:

Ms. Michelle Spohnheimer  
City of Marshalltown  
24 N Center Street  
Marshalltown, IA 50158

### B. Personnel

|                                    |                            |                |
|------------------------------------|----------------------------|----------------|
| QC/QA: Jon Reis                    | State of Iowa Lead License | LEAD-INSP10006 |
| Project Manager: Tyler Silverthorn | State of Iowa Lead License | LEAD-INSP10031 |
| Inspector: Leon Johnson            | State of Iowa Lead License | LEAD-INSP10136 |

### C. Sampling Plan

The scope of this LBP Inspection included the interior and exterior of the commercial building with the exception of the roofs.

The LBP Inspection was based on Iowa Administrative Code (IAC) *Chapter 70 – Lead-Based Paint Activities*. These guidelines, and additional EPA guidelines, specify using an X-Ray Fluorescence (XRF) analyzer to detect LBP on all coated surfaces within the structure.

### D. Regulation Review

Lead-Based Paint (LBP) is defined as paint or other surface coatings that contain lead greater than or equal to 1.0 milligram per square centimeter (mg/cm<sup>2</sup>) or greater than 0.5 percent (%) by weight. LBP is present on any surface that is tested and found to contain lead above these levels, and on any surface like a surface tested in the same room equivalent that has a similar painting history and that is found to be LBP.

## 3.0 PROPERTY DESCRIPTION

The Property consists of a 3,400 square foot vacant commercial building. The original building on the Property is a two-story brick structure with a basement constructed circa 1890. A one-story addition was constructed circa 1964.

## 4.0 INSPECTION LIMITATIONS

An Inspection limitation, for the purpose of this report, is any action or task that is limited from the original scope work. The overall reason for any limitation is the protection of Impact7G personnel. Examples of limitations can range from a lack of accessibility to an area of the Property, unsafe work areas, collecting additional samples, etc.

| Location/Area | Component                                | Reason       |
|---------------|------------------------------------------|--------------|
| Exterior      | 2 <sup>nd</sup> Story Roof, Upper Fascia | Inaccessible |

## **5.0 INSPECTION ACTIVITIES**

### **5.1 Lead-Based Paint Sampling**

An Iowa certified lead-based paint inspector from Impact7G collected one hundred, seventy-one (171) samples (plus six (6) calibration readings) on April 24, 2023. The samples were collected from various painted surfaces located throughout the Property. XRF results from all samples collected are provided in Appendix B.

The summary table identifying positive XRF results is provided in the Executive Summary.

## **6.0 OPERATIONS & MAINTENANCE PROGRAM RECOMMENDATIONS**

### **6.1 Lead-Based Paint**

According to OSHA 29 CFR 1926.62 the Action Level (AL) for airborne concentrations of lead is 30 micrograms/cubic meter of air ( $\mu\text{g}/\text{m}^3$ ) over an 8-hour Time-Weighted Average (TWA). The AL is the level of lead in air that the employer must take specific actions described in the standard. The Permissible Exposure Limit (PEL) for airborne concentrations of lead is 50  $\mu\text{g}/\text{m}^3$  over an 8-hour TWA. If the worksite exceeds the PEL proper signage and personal protective equipment (PPE) must be used.

When completing work on LBP components Impact7G recommends the following to reduce the level of airborne lead:

- No dry scraping of LBP, mist surfaces with water prior to scraping,
- No heat guns that operate above 1100 degrees Fahrenheit,
- No open flame burning,
- No abrasive blasting to remove, contained or uncontained,
- No uncontained water blasting,
- Utilize HEPA recovery systems on all abrasive tools used on LBP,
- Utilize containments and/or barrier systems to limit the migration of lead and lead dust.

Annual monitoring will be necessary at the Property since LBP is present, unless the components or paint is removed by total abatement. When LBP is present, the potential exists for LBP hazards. Hazards may occur by several causes including, but not limited to the following: the failure of lead hazard control methods; previously intact LBP becoming deteriorated; dangerous levels of lead in dust (dust lead) re-accumulating through friction, impact and deterioration of paint; or, through the introduction of contaminated exterior dust and soil into the interior of the structure. Ongoing monitoring for non-residential properties typically includes annual visual assessments. Visual assessments by the Property owner, should be conducted at least once a year, when the property owner or its management agent receives any complaints about deteriorated paint or other potential lead hazards, or when significant damage occurs that could affect the integrity of hazard control treatments (e.g. flooding, vandalism, fire). The visual assessment should cover painted surfaces and components. Visual assessments should confirm that all known LBP is not deteriorating, that lead hazard control methods have not failed, and that structural problems do not threaten the integrity of any remaining known or suspected LBP.

It should be noted that lead concentrations (in paint) that are less than the levels that identify a surface coating as LBP still have the potential of causing lead poisoning. Should these or any potential LBP painted component and/or surface be disturbed in any manner that generates dust, extreme care must be taken to limit its spread. Any renovation or remodeling work can disturb paint, which may create a hazardous condition. Safe work practices should be implemented

during any remodeling project, in addition to using a certified lead abatement contractor or professional certified lead worker. As long as there is lead-based paint present in the structure, there is a potential for a hazardous condition.

## **6.2 General O&M Program Guidance**

The O&M program should at a minimum consist of training, cleaning, work practices, monitoring, and recordkeeping to maintain these materials in good condition. A worker should be designated by the employer to manage the O&M program.

### ***Training***

OSHA requires employers to provide a training program for employees if there is a potential they might be exposed at or above the applicable TWAs discussed above. The EPA describes three types of training for custodial and maintenance workers:

- Type 1: Awareness Training – Employer provided two-hour training that discusses the background of lead-based paint, its health effects, worker protection, location of hazards in the building, recognition of damage or deterioration, and the O&M program for the building.
- Type 2: Special O&M Training – Employer provided 14-hour training that includes Type 1 topics, lead-based paint regulations, related work practices, handling LBP, respirator use, protective clothing, hands-on training, and decontamination procedures. A suitable alternative for this training is the EPA's Renovate, Repair, and Paint training.
- Type 3: Abatement Training – State certified 40-hour training that includes Type 1 and 2 topics, pre-abatement work activities, work area preparation, decontamination units, safety considerations, additional hands-on exercises, and disposal of LBP.

### ***Cleaning***

Appropriate cleaning methods should also be included in the O&M program. The cleaning methods should then be discussed with custodial and maintenance workers.

### ***Work Practices***

The basic procedures outlined below should be used by custodial and maintenance workers to minimize and/or contain hazards when the potential for disturbance exists:

- Wet methods (i.e. low pressure spraying of water)
- Use of mini-enclosures
- Use of portable power tools equipped with special local ventilation attachments (HEPA)
- Area isolation
- Avoidance of certain activities (i.e. sawing, sanding, drilling without HEPA recovery)

OSHA requires the use of protective clothing by custodial and maintenance workers when dealing with LBP hazards if they are exposed above the PEL. The protective clothing should be disposable and consists of full coverage coveralls, head cover, and foot covers. It should also be made of a durable, synthetic fiber that does not allow asbestos fibers or dust to pass through. The Type 1 and 2 training should discuss proper disrobing and disposal of the protective clothing.

OSHA also requires the use of respirators whenever workers are exposed to, or will likely be exposed to, hazards above the permissible exposure levels discussed above.

### ***Monitoring***

The EPA recommends a visual and physical evaluation of hazards during regular monitoring inspections to note the current condition and physical characteristics of the materials. Developing

a visual record, with photographs or video, will help determine the degree of damage and when materials need to be repaired or replaced.

Supplemental air monitoring may also be utilized as part of the O&M program. Air monitoring should supplement, not replace, the visual and physical evaluations of hazards. If employees may be exposed to airborne concentrations of hazards above the permissible limits, regulations require both initial and periodic air sampling during the project work.

### ***Recordkeeping***

As part of the O&M program, the following documents should be stored in permanent files:

- Inspection and assessment reports,
- O&M program plan,
- Work practices and procedures,
- Respirator use procedures (if applicable),
- Hazard release reports,
- Applications for maintenance work and work approval forms,
- Evaluations of work affecting hazards, and
- Reinspection/surveillance of hazards.

Additional OSHA recordkeeping requirements include:

- Maintaining personal air sampling records from work involving hazard exposure for at least 30 years,
- Data used to qualify for exemptions from OSHA's initial monitoring requirements,
- Maintaining medical records for each employee subject to the medical surveillance for the duration of the worker's employment plus 30 years,
- Maintaining training records for each worker during their employment plus 1 year,
- Hazard communication plan,
- Abatement notification records, and
- Transfers of records.

## **7.0 CONCLUSIONS / RECOMMENDATIONS**

The following conclusions and recommendations are summarized as follows:

- LBP was identified in twenty-two (22) of the one hundred seventy-one (171) samples taken from the property. These components include ceilings, walls, floors, window components, wall trim, door components, and a chair rail. The location of each LBP sample is listed in the table provided in the Executive Summary, and shown on the Positive Summary Maps in Appendix D. Lead safe work practices should be used when working in the vicinity of these sample locations to prevent a lead health hazard.

While pre-demolition/renovation abatement/removal of LBP components is not required by the Iowa Department Natural Resources (IDNR), Iowa Occupational Safety and Health (IOSH) may require additional personal protective equipment (PPE) be used if these materials are left in the structure during demolition/renovation.

Based on the presence of LBP throughout the Property, lead-safe work practices should be utilized during renovation activities. Options for mitigating lead hazards are abatement by removal, enclosure, encapsulation, or series of interim controls to manage LBP components in

place. In general, interim control options will likely be less expensive than abatement control options but will require the development of a management plan. Abatement control options do not require such a plan. Impact7G recommends that the identified LBP components be remediated in accordance with applicable Federal, State and Local Regulations.

If LBP components will remain, Impact7G recommends establishing an Operations & Maintenance (O&M) program. The O&M program should at a minimum consist of training, cleaning, work practices, monitoring, and recordkeeping to maintain these materials in good condition. Additional details on establishing an O&M program are discussed in Section 6.0 of this report.

This report is designed to aid the building owner, architect, construction manager, general contractor, and/or remediation contractor in locating LBP. This report is not to be used as abatement specifications, as it does not contain needed components to serve as such.

## **8.0 CONDITIONS & LIMITATIONS**

Impact7G has performed the tasks contained within this report in a thorough and professional manner consistent with commonly accepted standard industry practices. The results, findings, conclusions and recommendations expressed in this report are based on conditions observed during our survey of the property. Impact7G cannot guarantee, and does not warrant, that this report has identified all adverse environmental factors and/or conditions affecting the subject property on the date of the inspection. Impact7G cannot and will not warrant that the Inspection that was requested will satisfy the dictates of, or provide, a legal defense in connection with any environmental laws or regulations. It is the responsibility of the client to know and abide by all applicable laws, regulations, and standards, including EPA's Renovation, Repair and Painting regulations. This report is not a bidding document or project specification as it does not contain the necessary components. This report has been prepared on behalf of and exclusively for use of the City of Marshalltown, for specific application to their project as discussed. Contractors, consultants or other third parties reviewing this report must draw their own conclusions regarding data contained within the report, further investigation or required remediation.

It is a violation of law for anyone other than the certified lead professional signing it to alter this report. This report may be supplemented with additional information, so long as any addendum is signed by a lead inspector/risk assessor certified according to Iowa Administrative Code 641 – 70.3(135) and 70.5(135).

## **APPENDIX A**

### **Qualifications**

**Iowa Department of Public Health  
Bureau of Environmental Health Services  
Lead Professional Certification**

**IMPACT 7G INC**

**9550 HICKMAN ROAD SUITE 105  
CLIVE, IA 50325**

**is certified as a lead professional firm under Iowa Administrative  
Code 641 - Chapter 70**

**Certification No: LEAD-FIRM11561**

**Issued: January 12, 2021**

**Expires: January 11, 2024**

September 15, 2020

Jon H Reis  
2822 SW Village Circle  
Ankeny, IA 50023

Dear Jon H Reis

The department has reviewed the information you submitted and determined that you have met the requirements for certification in the state of Iowa as a Lead Inspector/Risk Assessor. Your certification number is: LEAD-INSP10006.

Your certification will expire on September 14, 2023. By that date, you must renew your certification in order to perform any lead professional certification activities. To renew your certification, you will need to have completed the appropriate refresher course. Refresher courses are valid if taken within 3-years from the date that you renew.

Please keep a copy of your certification on your person or in an easily retrievable area at the work site. If you submitted your application online or with a valid email address, the certification is being provided to you electronically. You may choose to either print these documents or have them available on your phone or other electronic device for display if requested.

You can find the certification requirements and work practice standards for all lead professionals in Iowa Administrative Code 641 - Chapter 70, which is at: <http://www.idph.iowa.gov/LPP> under "Resources". You **must** be currently certified to perform work that requires certification.

Dear Tyler Silverthorn

The department has reviewed the information you submitted and determined that you have met the requirements for certification in the state of Iowa as a Lead Inspector/Risk Assessor. Your certification number is: LEAD-INSP10031.

Your certification will expire on September 18, 2023. By that date, you must renew your certification in order to perform any lead professional certification activities. To renew your certification, you will need to have completed the appropriate refresher course. Refresher courses are valid if taken within 3-years from the date that you renew.

Please keep a copy of your certification on your person or in an easily retrievable area at the work site. If you submitted your application online or with a valid email address, the certification is being provided to you electronically. You may choose to either print these documents or have them available on your phone or other electronic device for display if requested.

Johnston, IA 50131

Dear Leon Johnson

The department has reviewed the information you submitted and determined that you have met the requirements for certification in the state of Iowa as a Lead Inspector/Risk Assessor. Your certification number is: LEAD-INSP10136.

Your certification will expire on November 16, 2025. By that date, you must renew your certification in order to perform any lead professional certification activities. To renew your certification, you will need to have completed the appropriate refresher course. Refresher courses are valid if taken within 3-years from the date that you renew.

Please keep a copy of your certification on your person or in an easily retrievable area at the work site. If you submitted your application online or with a valid email address, the certification is being provided to you electronically. You may choose to either print these documents or have them available on your phone or other electronic device for display if requested.

## **APPENDIX E**

### **Definitions and Key Units of Measure**

## DEFINITIONS

**Abatement:** A measure or set of measures designed to permanently eliminate lead-based paint hazards or lead-based paint. Abatement strategies include the removal of lead-based paint, enclosure, encapsulation, replacement of building components coated with lead-based paint, removal of lead contaminated dust, and removal of lead contaminated soil or overlaying of soil with a durable covering such as asphalt (grass and sod are considered interim control measures). All of these strategies require preparation; cleanup; waste disposal; post-abatement clearance testing; recordkeeping; and, if applicable, monitoring. (For full EPA definition, see 40 CFR 745.223).

**Bare soil:** Soil not covered with grass, sod, some other similar vegetation, or paving, including the sand in sandboxes.

**Chewable surface:** An interior or exterior surface painted with lead-based paint that a young child can mouth or chew. A chewable surface is the same as an “accessible surface” as defined in 42 U.S.C. 4851b(2). Hard metal substrates and other materials that cannot be dented by the bite of a young child are not considered chewable.

**Deteriorated paint:** Any paint coating on a damaged or deteriorated surface or fixture, or any interior or exterior lead-based paint that is peeling, chipping, blistering, flaking, worn, chalking, alligating, cracking, or otherwise becoming separated from the substrate.

**Drip line/foundation area:** The area within 3 feet out from the building wall and surrounding the perimeter of a building.

**Dust-lead hazard:** Surface dust in residences that contains an area or mass concentration of lead equal to or in excess of the standard established by the EPA under Title IV of the Toxic Substances Control Act. EPA standards for dust-lead hazards, which are based on wipe samples, are published at 40 CFR 745.65(b); as of the publication of this edition of these *Guidelines*, these are 40 µg/ft<sup>2</sup> on floors and 250 µg/ft<sup>2</sup> on interior windowsills. Also called lead-contaminated dust.

**Friction surface:** Any interior or exterior surface, such as a window or stair tread, subject to abrasion or friction.

**Garden area:** An area where plants are cultivated for human consumption or for decorative purposes.

**Impact surface:** An interior or exterior surface (such as surfaces on doors) subject to damage by repeated impact or contact.

**Interim controls:** A set of measures designed to temporarily reduce human exposure or possible exposure to lead-based paint hazards. Such measures include, but are not limited to, specialized cleaning, repairs, maintenance, painting, temporary containment, and the establishment and operation of management and resident education programs. Monitoring, conducted by owners, and reevaluations, conducted by professionals, are integral elements of interim control. Interim controls include dust removal; paint film stabilization; treatment of friction and impact surfaces; installation of soil coverings, such as grass or sod; and land use controls. Interim controls that disturb painted surfaces are renovation activities under EPA’s Renovation, Repair and Painting Rule.

**Lead-based paint:** Any paint, varnish, shellac, or other coating that contains lead equal to or greater than 1.0 mg/cm<sup>2</sup> as measured by XRF or laboratory analysis, or 0.5 percent by weight (5000 mg/g, 5000 ppm, or 5000 mg/kg) as measured by laboratory analysis. (Local definitions may vary.)

**Lead-based paint hazard:** A condition in which exposure to lead from lead contaminated dust, lead contaminated soil, or deteriorated lead-based paint would have an adverse effect on human health (as established by the EPA at 40 CFR 745.65, under Title IV of the Toxic Substances Control Act). Lead-based paint hazards include, for example, **paint-lead hazards**, **dust-lead hazards**, and **soil-lead hazards**.

**Paint-lead hazard:** Lead-based paint on a friction surface that is subject to abrasion and where a dust-lead hazard is present on the nearest horizontal surface underneath the friction surface (e.g., the window sill, or floor); damaged or otherwise deteriorated lead-based paint on an impact surface that is caused by impact from a related building component; a chewable lead-based painted surface on which there is evidence of teeth marks; or any other deteriorated lead-based paint in any residential building or child-occupied facility or on the exterior of any residential building or child-occupied facility.

**Play area:** An area of frequent soil contact by children of under age 6 as indicated by, but not limited to, such factors including the following: the presence of outdoor play equipment (e.g., sandboxes, swing sets, and sliding boards), toys, or other children's possessions, observations of play patterns, or information provided by parents, residents, care givers, or property owners.

**Soil-lead hazard:** Bare soil on residential property that contains lead in excess of the standard established by the EPA under Title IV of the Toxic Substances Control Act. EPA standards for soil-lead hazards, published at 40 CFR 745.65(c), as of the publication of this edition of these *Guidelines*, is 400 µg/g in play areas and 1,200 µg/g in the rest of the yard. Also called lead-contaminated soil.

## KEY UNITS OF MEASURE

**Gram (g or gm):** A unit of mass in the metric system. A nickel weighs about 1 gram, as does a 1 cube of water 1 centimeter on each side. A gram is equal to about 35/1000 (thirty-five thousandths of an ounce). Another way to think of this is that about 28.4 grams equal 1 ounce.

**µg (microgram):** A microgram is 1/1000<sup>th</sup> of a milligram. To put this into perspective, a penny weighs 2 grams. To get a microgram, you would need to divide the penny into 2 million pieces. A microgram is one of those two million pieces.

**µg/dL (microgram per deciliter):** used to measure the level of lead in children's and worker's blood to establish whether intervention is needed. A deciliter is a little less than a half a cup.

**µg/ft<sup>2</sup> (micrograms per square feet):** the unit used to express levels of lead in dust samples. All reports should report levels of lead in dust in µg/ft<sup>2</sup>.

**mg/cm<sup>2</sup> (milligrams per square centimeter):** used to report levels of lead in paint thru XRF testing.

**ppm (parts per million):** Typically used to express the concentrations of lead in soil. Can also be used to express the amount of lead in a surface coating on a mass concentration basis. This measurement can also be shown as: µg/g, mg/kg or mg/l.

**ppb (parts per billion):** Typically used to express the amount of lead found in drinking water. This measurement is also sometimes expressed as: µg/L (micrograms per liter).

### Iowa Lead-Based Paint and Lead-Based Paint Hazard Standards

#### Lead-Based Paint (may be determined in either of two ways)

- Surface concentration (mass of lead per area) 1.0 mg/cm<sup>2</sup>
- Bulk concentration (mass of lead per volume) 0.5%, 5000 mg/kg, or 5000 ppm

#### Dust-thresholds for Lead-Contamination

- Floors 10 µg/ft<sup>2</sup>
- Interior Window Sills 100 µg/ft<sup>2</sup>
- Window Troughs (clearance examination only) 400 µg/ft<sup>2</sup>

#### Soil-thresholds for Lead Contamination

- Iowa Department of Natural Resources 400 mg/kg or 400 ppm

## **APPENDIX D – Lead-Based Paint Interim Control/Abatement Cost Estimate**

City of Marshalltown  
Hector Hernandez-Morales  
City Planner  
36 N Center Street  
Marshalltown, Iowa 50158

Dear Mr. Hernandez-Morales,

Impact7G completed a Lead-Based Paint (LBP) Inspection report on May 9, 2023 for the existing commercial building located at 20 E Main Street, Marshalltown, Iowa, 50158 (Property). Impact7G has compiled this LBP interim control/abatement cost estimate for the control and abatement of LBP identified within the Property's interior and exterior. Multiple factors can influence the costs. These include but are not limited to: time of the year the project is bid/completed, timeframe allowed for completion, material costs, prequalifications, and insurance/bonding requirements.

| <b>NOTE(S):</b>                                                                                                     |                                                                                                                                                                                                                                                           |                                 |

**SECTION 00 73 19**  
**HEALTH AND SAFETY REQUIREMENTS**

**PART 1 GENERAL**

**1.01 SUMMARY**

- A. Section Includes:
1. Health and Safety requirements.

**1.02 MEASUREMENT AND PAYMENT**

- A. Work specified in this section is included in the lump sum contract price.

**1.03 DESCRIPTION**

- A. Contractor is responsible for implementation and enforcement of safe Work practices including, but not limited to, personnel exposure to refuse, hazardous materials; use of trenching, sheeting, and shoring; scaffolding; materials handling; operation of equipment; and safety of public during progress of work.

**1.04 QUALITY ASSURANCE**

- A. Regulatory Requirements:
1. Contractor shall plan for and ensure personnel comply with basic provisions of OSHA Safety and Health Standards (29 CFR 1910), and General Construction Standards (29 CFR 1926) as appropriate.
  2. Comply with applicable laws and regulations of any public body having jurisdiction for safety of persons or property.

**1.05 OPERATIONS AND EQUIPMENT SAFETY**

- A. Contractor is responsible for initiating, maintaining, and supervising safety precautions and programs in connection with work. Contractor shall take necessary precautions for safety of employees on project site and other persons and organizations who may be affected by project.
- B. Contractor's duties and responsibilities for safety in connection with work shall continue until such time as work is complete as applicable under the Contract.

**1.06 HEALTH AND SAFETY**

- A. Contractor is responsible for implementation and enforcement of health and safety requirements, as well as compliance with all applicable state and federal laws, and will take necessary precautions and provide protection for following.
1. Personnel working on or visiting project site, irrespective of employer.
  2. Work and materials or equipment to be incorporated in work area on- or off-site.
  3. Other property at or adjacent to project site.
  4. Public exposed to job related operations or potential release of toxic or hazardous materials.
- B. Contractor shall prepare site-specific health and safety plan (HASP) following the requirements of 29-CFR 1910.120, and 29-CFR 1910.146. Such plan shall include

appropriate measures for confined space entry as project conditions warrant. If Contractor does not have capability to prepare HASP, Contractor shall employ consultants with appropriate capabilities. Contractor is solely responsible for adequacy of HASP's preparation, monitoring, management, and enforcement. At minimum, Contractor's HASP shall address following.

1. Site description and history.
2. Project activities, including coordination with other Contractors.
3. Hazard evaluation.
4. On-site safety responsibilities.
5. Work zones.
6. Personnel training.
7. Medical monitoring.
8. Atmospheric monitoring.
9. Personal protection, clothing, and equipment.
10. Decontamination procedures.
11. Emergency procedures.

#### **1.07 CONSULTANT'S RESPONSIBILITIES (IF UTILIZED)**

- A. When Consultant is required to be present on project site to perform consulting services, Consultant will comply with Contractor's safety plans, programs, and procedures.
- B. If Consultant determines Contractor's safety plans, programs, and procedures do not provide adequate protection for Consultant, Consultant may direct its employees to leave project site or implement additional safeguards for Consultant's employees. If taken, these actions will be in furtherance of Consultant's responsibility to its own employees only, and Consultant will not assume responsibility for protection of any other persons affected by work.
- C. If Consultant observes situations which appear to have potential for immediate and serious injury to persons, Consultant may warn persons who appear to be affected by such situations and shall advise Contractor and OWNER of its actions. Such warnings, if issued, shall be given based on general humanitarian concerns, and Consultant will not, by issuance of any such warning, assume responsibility to issue future warnings or any general responsibility for protection of persons affected by work.

#### **1.08 SUBMITTALS**

- A. Submit copies of Health and Safety Plan (HASP) to OWNER and Consultant within 10 days after Notice to Proceed. Work on-site shall not proceed until HASP has been submitted.
  1. Submittal of Contractor's HASP to Consultant is to inform Consultant and OWNER so they can comply with HASP during performance of their on-site responsibilities as described in Contract Documents.
  2. Submittal of Contractor's HASP shall neither impose on Consultant or OWNER responsibility for adequacy of HASP nor relieve Contractor from full responsibility, therefore.

26. RESPONSIBILITY OF CONTRACTOR

## 1. DEFINITION AND INTENT

A. The Technical Specifications that apply to the materials and construction practices for this project are defined as follows:

1. Omissions of words or phrases such as "the Contractor shall", "in accordance with", "shall be", "as noted on the Plans", "according to the Plans", "a", "an", "the" and "all" are unintentional; supply omitted words or phrases by inference.
2. "CITY" or "Jurisdiction" shall mean the City of Marshalltown (CITY).
3. "OWNER" shall mean the owner of the building.
4. "Person" shall mean any individual, partnership, limited partnership, joint venture, society, association, joint stock company, corporation, limited liability company, estate, receiver, trustee, assignee, or referee, whether appointed by a court or otherwise, and any combination of individuals.
5. "Consultant" shall mean OWNER or designated agent.
6. The intent of the Technical Specifications is to describe the abatement desired, performance requirements, and standards of materials and abatement.
7. "Work" shall mean the work to be done and the equipment, supplies, and materials to be furnished under the contract unless some other meaning is indicated by the context.
8. "Or equal" shall follow manufacturers names used to establish standards and, if not stated, is implied.

B. Consultant (if utilized): Not yet determined.

## 2. GENERAL PROVISIONS AND COVENANTS

- A. Procedures outlined herein are not intended to fully cover all special abatement procedures but are offered as an aid to the Contractor in planning work.
- B. Cooperate with the OWNER to minimize inconvenience to property owners, other jurisdictions and motorists and to prevent delays in abatement and interruption to continuous operation of utility services and site access.
- C. The Contractor is expected to provide adequate personnel and equipment to perform work within specified time of abatement.
- D. Install and maintain temporary fencing as required by OSHA or as needed to prevent unauthorized entry to construction areas and to protect existing facilities and adjacent properties from damage during construction operations. Temporary fencing, if utilized, must be maintained for the duration of the Work.

## 3. WORK REQUIRED

- A. Work under this contract includes all materials, equipment, transportation, labor, disposal and associated work for the asbestos abatement project.
- B. This project consists of one contract for all Work described.

## 4. SALVAGE OF MATERIALS AND EQUIPMENT

- A. No salvage of materials by the Contractor is allowed.

## 5. PLANS AND SPECIFICATIONS

- A. Upon request, the OWNER will furnish 1 set of the Project Manual to the Contractor after award of the contract.

#### 6. CONSTRUCTION FACILITIES

- A. Provide telephone numbers where Contractor's representative can be reached during workdays and on nights and weekends in event of emergency.
- B. Power and water are disconnected and will be supplied by the Contractor or OWNER.
- C. Provide and maintain suitable sanitary facilities for abatement personnel for duration of Work; remove upon completion of Work.
- D. Do not store abatement equipment, employee's vehicles, or materials on streets open to traffic. Location for storage of equipment by Contractors is subject to approval of OWNER and CITY.
- E. The contractor shall provide suitable storage facilities necessary for proper storage of materials and equipment.
- F. The Contractor will be required to make arrangements for all services required during the abatement period and pay for such services at no additional cost to the OWNER.

#### 7. SUBMITTALS

- A. Provide abatement schedule showing dates of starting and completing various portions of Work.
- B. Include all other submittals:
  - 1. Copy of 10-day notification
  - 2. Waste Manifests (no later than one (1) week after completion date)
  - 3. Site-Specific Health and Safety Plan (HASP)
  - 4. Certificate of Insurance
  - 5. Payment and Performance Bond

#### 8. STANDARDS AND CODES

- A. Construct improvements with best present-day abatement practices and equipment.
- B. Conform with and test in accordance with applicable sections of the following standards and codes.
  - 1. Title 29 Code of Federal Regulations Section 1910.1001, General Industry Standard for Asbestos.
  - 2. Title 29 Code of Federal Regulations Section 1926.1101, Construction Industry Standard for Asbestos.
  - 3. Title 29 Code of Federal Regulations Section 1910.134, General Industry Standard for Respiratory Protection.
  - 4. Title 29 Code of Federal Regulations Section 1910.2, Access to Employee Exposure and Medical Records.
  - 5. Title 29 Code of Federal Regulations Section 1910.1200, Hazard Communication Rule.

6. Title 40 Code of Federal Regulations Part 61 Subpart A and Subpart M (revised Subpart B), National Emissions Standard for Hazardous Air Pollutants.
  7. Iowa Administrative Code Section 875 Chapter 155, Asbestos Removal & Encapsulation.
  8. Title 49 Code of Federal Regulations Part 171 - 180, Department of Transportation, Transportation of Hazardous Waste.
- C. The following standards, regulations, codes and other applicable documents are additional requirements of asbestos abatement projects.
1. E.P.A. Guidance Document: Asbestos Waste Management Guidance (Blue Book).
- D. The most recent edition of any relevant regulation, standard, document or code shall be in effect. Where conflict among the requirements or with these Specifications exists, the most stringent requirements shall be utilized.
9. DEFINITIONS

**ABATEMENT:** Procedures to control fiber release from asbestos containing materials. Includes removal, encapsulation, enclosure, and repair.

**ACBM:** Asbestos Containing Building Material.

**ACM:** Asbestos Containing Material

**ACCREDITED:** Refers to a person or laboratory means that such person or laboratory is accredited in accordance with section 206 of Title II of the Toxic Substance Control Act.

**ADDENDA:** are written or graphic instruments issued by the OWNER prior to the execution of the Contract which modify or interpret the Bidding Documents by addition, deletions, clarifications or corrections.

**ACGIH:** American Conference of Governmental Industrial Hygienists, 6500 Glenway Avenue, Building D-5, Cincinnati, OH 45211.

**AGGRESSIVE METHOD:** Removal or disturbance of building material by sanding, abrading, grinding, or other method that breaks, crumbles, or disintegrates intact ACM.

**AHERA:** Asbestos Hazard Emergency Response Act.

**AIHA:** American Industrial Hygiene Association, 475 Wolf Ledges Parkway, Akron, OH 44311.

**AIR LOCK:** A system for permitting passage with minimal air movement between a contaminated and an uncontaminated area.

**ALTERNATE BID:** (or alternate) is an amount stated in the Bid for which the Bidder offers to perform the Work described in the Bidding Documents as the alternate bid.

**AMENDED WATER:** Water to which a surfactant has been added.

**ANSI:** American National Standards Institute, 1430 Broadway, New York, NY 10018.

**ASBESTOS CONTAINING WASTE MATERIAL:** Asbestos containing material or

asbestos contaminated objects requiring disposal.

ASTM: American Society for Testing and Materials, 1916 Race Street, Philadelphia, PA 19103.

AUTHORIZED VISITOR: The OWNER (and any designated representatives) and any representatives of a regulatory or other agency having jurisdiction over the project.

BASE BID: is the sum stated in the Bid for which the Bidder offers to perform the Work described in the Bidding Documents as the base bid.

BID: is a complete and properly signed proposal to do the Work or designated portion thereof for the sums stipulated therein, submitted in accordance with the Bidding Documents.

BIDDER: A person or entity who submits a bid.

BIDDING DOCUMENTS: Include the Instructions to Bidders, the bid form, other sample bidding and contract forms, and the proposed Contract Documents including Addenda issued prior to receipt of bids.

BRAND METHOD: A differential pressure containment system that does not infringe on the patent rights of GPAC, Inc's Reduced Pressurization and Filtration System.

BUILDING OWNER: OWNER, or an authorized representative

CEILING CONCENTRATION: The concentration of an airborne substance that shall not be exceeded.

CLASS I ASBESTOS WORK: Activities involving the removal of TSI and Surfacing ACM and PACM.

CLASS II ASBESTOS WORK: Activities involving the removal of ACM which is not TSI or surfacing material. This includes, but is not limited to, the removal of asbestos containing wallboard, floor tile and sheeting, roofing and siding shingles, and construction mastics.

CLASS III ASBESTOS WORK: Repair and maintenance operations, where ACM, including TSI and surfacing material is likely to be disturbed.

CLASS IV ASBESTOS WORK: Maintenance and custodial activities during which employees contact ACM and PACM, and activities to clean up waste and debris containing ACM and PACM.

CLEAN ROOM: An uncontaminated area which is a part of the worker decontamination containment system with provisions for storage of workers' street clothes and clean protective equipment.

COMPETENT PERSON: One who is capable of identifying existing asbestos hazards in the workplace and selecting the appropriate control strategy for asbestos exposure, who has the authority to take prompt corrective measures to eliminate them. In addition, for Class I and Class II work who is specially trained in a training course which meet the criteria of EPA's Model Accreditation Plan for project designer or supervisor, or its

equivalent and, for Class III and Class IV work, who is trained in an Operations & Maintenance (O&M) course developed by EPA.

CONSULTANT: OWNER's designated agent – not yet determined.

CONTRACTOR: The individual and/or business with whom the OWNER arranges to perform the asbestos abatement.

CURTAINED DOORWAY: A device to allow passage from one room to another while permitting minimal air movement between the rooms, by placing two overlapping sheets of plastic in doorway with both secured at top and opposite vertical edges. This doorway is to be used only by GPAC, Inc. approved licensees.

DECONTAMINATION CONTAINMENT SYSTEM: A series of connected rooms separated from the Work area and from each other by airlocks, for the decontamination of workers and equipment.

DEMOLITION: The wrecking or taking out of any building component, system, finish or assembly of a facility together with any related handling operations.

DISTURBANCE: Contact which releases fibers from ACM or PACM or debris containing ACM or PACM. This term includes activities that disrupt the matrix of ACM or PACM, render ACM or PACM friable, or generate visible debris. Disturbance includes cutting away small amounts of ACM or PACM, no greater than the amount which can be contained in one standard sized glove bag or waste bag in order to access a building component. In no event shall the amount of ACM or PACM so disturbed exceed that which can be contained on one glove bag or waste bag which shall not exceed 60 inches in length and width.

ENCAPSULANT: A material that surrounds or embeds asbestos fibers in an adhesive matrix, to prevent release of fibers.

BRIDGING ENCAPSULANT: an encapsulant that forms a discrete layer on the surface of an in situ asbestos matrix.

PENETRATING ENCAPSULANT: an encapsulant that is absorbed by the in situ asbestos matrix without leaving a discrete surface layer.

ENCLOSURE: An airtight, impermeable barrier made of enclosure material to control release of asbestos fibers from contaminated building surfaces.

ENCLOSURE MATERIAL: Polyethylene sheeting or spray applied water-based strippable coating.

EQUIPMENT ROOM: A contaminated area which is part of the worker decontamination containment system with provisions for storage of contaminated clothing and equipment.

EPA: U.S. Environmental Protection Agency, 401 M Street S.W., Washington, D.C. 20460.

FRIABLE ASBESTOS: Asbestos containing material which can be crumbled to dust (when dry) under hand pressure.

HVAC: Heating, ventilation and air conditioning system.

HEPA FILTER: A High Efficiency Particulate Air filter capable of removing particles .3 microns in diameter with 99.97% efficiency.

HEPA VACUUM: A vacuum system equipped with HEPA filtration.

HOMOGENEOUS AREA: An area of surfacing material, thermal system insulation material, or miscellaneous material that is uniform in color and texture.

LEAD-BASED PAINT: Any paint or surface coating that contains lead equal to or exceeding one milligram per square centimeter (1.0 mg/cm<sup>2</sup>) or 0.5% by weight.

NEGATIVE EXPOSURE ASSESSMENT: A demonstration by the employer, that the employee exposure during an operation is expected to be consistently below the PEL's.

NESHAP: The National Emission Standards for Hazardous Air Pollutants (40 CFR Part 61).

NIOSH: The National Institute for Occupational Safety and Health, CDC-NIOSH, Building J. N.E. Room 3007, Atlanta, GA 30033.

NIST: National Institute of Standards and Technology.

NPE: Negative Pressure Enclosure

OSHA: The Occupational Safety and Health Administration, 200 Constitution Avenue, Washington, D.C. 20210.

OWNER'S REPRESENTATIVE: Not yet determined.

PACM: Presumed asbestos containing material.

PAT PROGRAM: Proficiency Analytical Testing Program.

PEL: Permissible Exposure Limit, for asbestos currently 0.1 f/cc for an 8-hour TWA.

PROTECTION FACTOR: The ratio of the ambient concentration of an airborne substance to the concentration of the substance inside the respirator at the breathing zone of the wearer. The protection factor is a measure of the degree of protection provided by a respirator to the wearer.

REMOVAL: The stripping of any asbestos containing material from surfaces or components of a facility.

REPAIR: Overhauling, rebuilding, reconstructing, or reconditioning of structures or substrates, including encapsulation or other repair of ACM or PACM attached to structures or substrates.

SHOWER ROOM: A room between the clean room and the equipment room in the worker decontamination containment with hot and cold or warm running water controllable at the top and suitably arranged for complete showering during decontamination.

STAGING AREA: Either the holding area or some area near the waste transfer airlock

where containerized asbestos waste has been placed prior to removal from the Work area.

STRIP: To take off friable asbestos materials from any part of the facility.

SURFACTANT: A chemical wetting agent added to water to improve penetration.

TEM: Transmission electron microscope.

TIME WEIGHTED AVERAGE (TWA): The average concentration of a contaminant in air during a specific time period.

TSI: Thermal System Insulation.

UNIT PRICE: is an amount stated in the Bid as a price per unit of measurement for materials or services as described in the Bidding Documents or in the proposed Contract Documents.

VISIBLE EMISSIONS: Any emissions containing particulate asbestos material that are visually detectable without the aid of instruments. This does not include condensed, uncombined water vapor.

WASTE GENERATOR: The individual and/or business who performs the asbestos abatement.

WASTE TRANSFER AIRLOCK: A decontamination system utilized for transferring containerized waste from inside to outside of the Work area.

WET CLEANING: The process of eliminating asbestos contamination from building surfaces and objects by using cloth, mops, or other cleaning utensils which have been dampened with water and afterwards thoroughly decontaminated or disposed of as asbestos contaminated waste.

WORK AREA: Designated rooms, spaces, or areas of project in which asbestos abatement actions are to be undertaken or which may become contaminated as a result of such abatement actions. A contained Work area is a Work area which has been sealed, plasticized, and equipped with a decontamination containment system. A non-contained Work area is an isolated or controlled-access Work area which has not been plasticized nor equipped with a decontamination containment system.

## 10. RIGHT-OF-WAYS

- A. The project location is on public property. None of the Work will be within CITY right-of-way.

## 11. EMPLOYMENT PRACTICES

- A. Neither the Contractor nor the Contractor's Subcontractors shall employ any person whose physical or mental condition is such that this employment will endanger the health and safety of anyone employed on the project.
- B. The Contractor shall not commit any of the following employment practices and agrees to include the following clauses in any Subcontracts:
  - 1. To discharge from employment or refuse to hire any individual because of sex, race, color, religion, national origin, sexual orientation, marital status, age, or

disability unless such disability is related to job performance of such person or employee.

2. To discriminate against any individual in terms, conditions, or privileges or employment because of sex, race, color, creed, religion, national origin, sexual orientation, gender identify, age, or disability unless such disability is related to job performance of such person or employee.

## 12. WORK HOURS

- A. The Contractor will be required to limit the Contractor's Work hours on the project from 7:00 a.m. to 10:00 p.m., Monday through Sunday, unless otherwise directed by the Consultant. Notice to work outside these hours or on Holidays must be presented to the OWNER at least 48 hours in advance and requires written permission from the OWNER and CITY.

## 13. DUST ABATEMENT

- A. The Contractor shall make all reasonable efforts to control dust and assure dust does not become a problem. Anytime ACM debris is disturbed, Contractor is required, at a minimum, to mist the area to minimize airborne fibers and ensure no visible emissions. The OWNER and Consultant reserve the right to stop Contractor's operations whenever dust becomes a problem on the project and direct the Contractor to submit a revised operations plan to solve the dust problem.

## 14. QUANTITIES

- A. The Contractor is to realize some of the quantities on this project are best estimates and may vary from actual conditions at time of abatement of the project. Quantities must be regarded as approximate only, and are given as a guide to the Bidder and for comparison of Bids. The Contractor is responsible for verification of all materials and quantities listed below. Asbestos abatement bids may be for all asbestos identified below or only asbestos that is to be disturbed as part of building renovations. OWNER will specify materials to be abated. No additions to the contract will be allowed for additional ACMs discovered that amount to less than 10% of the quantities identified in 02 82 00 Asbestos Remediation. If additional amounts greater than 10% are identified, Contractor is to stop Work and notify the OWNER and Consultant immediately.

## 15. MAINTENANCE BOND AND WARRANTY PERIODS (IF REQUIRED)

- A. The requirements of the Payment, Performance and Maintenance Bond warranty period are modified as follows:
  1. To remedy any and all defects that may develop in or result from Work to be performed under the Contract within two years from the date of acceptance of the Work under the Contract, by reason of defects in workmanship or materials used in construction of said work.

## 16. MEASUREMENT AND PAYMENT

- A. Contract unit or lump sum prices are full compensation for furnishing all materials, equipment, tools, transportation, and labor necessary to construct and complete each item of Work as specified. All other items of Work are incidental to abatement. All additional Work must be in writing as a detailed change order signed by the OWNER.

## 17. INSURANCE REQUIREMENTS

- A. The Contractor shall purchase and maintain insurance to protect the Contractor and the OWNER against all hazards herein enumerated throughout the duration of the contract. Said insurance shall be provided by an insurance company or companies, "admitted" or "non-admitted" to do business in the State of Iowa, having an A.M. Best rating of no less than "B+."

#### 18. INCIDENTAL CONTRACT ITEMS

- A. The following list includes, but is not limited to, major items that are incidental to the project and will not be paid for as separate bid items. Other items may be designated as incidental under certain bid items.
- Capping any utilities
  - Connections to existing storm sewer structures and pipes unless specified for separate payment
  - Construction and removal of temporary access roads
  - Construction fencing
  - Construction staging & phasing
  - Coordination and cooperation with affected property owners
  - Coordination and cooperation with the OWNER
  - Coordination and cooperation with other Contractors
  - Coordination and cooperation with other projects in the area
  - Coordination and cooperation with utility companies
  - Dewatering and handling storm water flow during construction
  - Dust control measures
  - Excavation, verification and protection of existing utilities
  - Field and wood fence removal
  - Maintenance and watering for seeding and sodding
  - Maintenance of erosion control measures
  - Monitoring weather conditions
  - Protection of existing hydrant(s) and valve(s)
  - Protection of existing trees and plantings not shown as removals
  - Protection of existing utilities and light poles
  - Protection of historical and existing building elements to be left in place or removed under a separate contract.
  - Removing and reinstalling existing signs
  - Removal means and methods of hazardous materials (including slow unmanned elevator operations)
  - Reseeding
  - Site cleanup/restoration
  - Temporary safety closures
  - Temporary street closure

#### 19. EXISTING UTILITIES

- A. Prior to construction, contact all utility companies and have all utility lines and services located. The Contractor is responsible for exposing utilities in order to confirm their locations ahead of the Work.
- B. Contractor is solely responsible for damage to utilities or private or public property due to utility disruption.

- C. The Contractor shall notify utility company immediately if utility infrastructure is damaged during abatement.
- D. Contractor will contact and work with utility companies to relocate utility infrastructure in direct conflict with line and grade of the work during abatement. Support and protect all utilities that are not moved.
- E. Protect and maintain services during abatement. Notify OWNER, CITY, and Consultant 48 hours prior to any planned utility service interruptions.
- F. If utility Work does occur during the abatement period, Work schedules from the contractor and from the utility companies will be submitted to the OWNER and Consultant for coordination to obtain mutual acceptable schedules, if possible.
- G. No claims for additional compensation or time extension will be allowed to the Contractor for interference or delay caused by utility companies.

## 20. PROJECT SUPERVISION

- A. The Contractor shall be represented in person at the abatement site at all times that abatement operations are proceeding by a qualified supervisor or other designated, qualified representative capable of providing adequate supervision. The supervisor or representative must be duly authorized to receive and execute instructions, notices and written orders from the OWNER.
- B. Issues that arise during abatement relating to traffic control and abatement staging, etc. are the responsibility of the Contractor.
- C. Bi-weekly progress meetings, if specified at a preconstruction meeting, with the Contractor and OWNER/Consultant will be held at the project site to review the updated project schedule and progress, coordinate activities, resolve conflicts and coordinate the abatement Work. The day and time for this meeting will be set at the preconstruction meeting.

## 21. COORDINATION WITH OTHERS

- A. Cooperate and coordinate abatement with OWNER, Consultant, CITY, utility companies, affected property Jurisdictions and other contractors working in vicinity of this project.
- B. It is the Contractor's responsibility to schedule and coordinate Work to minimize abatement delays and conflicts.
- C. Coordinate with property owners prior to beginning Work that will affect their parcel.

## 22. CONSTRUCTION LIMITS

- A. Confine the construction operations within the property boundary.
- B. Do not store equipment, vehicles or materials within the right-of-way of any streets open to traffic or on temporary access roads at any time.
- C. Areas disturbed outside of abatement limits shall be restored at the contractor's expense to the satisfaction of the OWNER.
- D. Contractor shall park all vehicle, trailers and storage containers in designated areas only during the project.

## 23. CONSTRUCTION SCHEDULE

- A. The Contractor will prepare and submit to the OWNER for approval a project schedule that will assure the completion of the project within the time specified.
- B. Adequate equipment and forces shall be made available by the Contractor to start Work immediately upon receipt of the Notice to Proceed
- C. Submit abatement schedule at the preconstruction meeting and periodically update it as requested by the OWNER.
- D. The Contractor shall be required to meet the final agreed upon completion date.
- E. Notify the CITY, OWNER, and property owners at least 48 hours prior to any street closures.
  - 1. Notify all property owners, residential and business, affected by the street closures by written notice placed on the front door. Include the following items in the notice:
    - a. The street name, location and proposed date of street closure
    - b. The estimated schedule for completion of Work
    - c. The estimated date for reopening of the street
    - d. Procedure for garbage collection, recycling and postal service

#### 24. DISPOSAL

- A. Dispose of materials in accordance with applicable laws and ordinances.
  - 1. Burning of brush and other debris is not permitted. Contractor responsible for selecting disposal site.
  - 2. Dispose of broken concrete, asphalt, granular material, rubble, excess or unsuitable excavated material. Contractor is responsible for selecting disposal site.
  - 3. Cooperate with all applicable county, state and federal agencies concerning disposal of materials.
  - 4. The OWNER has the first right to any excess materials from abatement.
  - 5. No salvage of materials by the Contractor is allowed.

#### 25. TEMPORARY FENCES

- A. Contractor to install and maintain temporary fencing as required by OSHA or as needed to prevent unauthorized entry to construction areas and to protect existing facilities and adjacent properties from damage from construction operations. Temporary fencing, if utilized, must be maintained for the duration of the Work.

#### 26. RESPONSIBILITY OF CONTRACTOR

- A. Supervision of the Work.
- B. Protection of all property from injury or loss resulting from abatement operations.
- C. Replace or repair objects sustaining any such damage, injury or loss to satisfaction of OWNER.
- D. Cooperate with OWNER, CITY, Consultant, and representatives of utilities in locating utility lines and structures. Incorrect, inaccurate or inadequate information concerning location of utilities or structures shall not relieve the Contractor of responsibility for

damage thereto caused by abatement operations. Contractor shall field verify all utility locations.

- E. Keep cleanup current with abatement operations.
- F. Comply with all federal, State of Iowa, and the City of Marshalltown, Iowa laws and ordinances.

**END OF SECTION**

## SECTION 01 10 00

### SUMMARY

#### PART 1 GENERAL

##### 1.01 PROJECT DESCRIPTION

- A. Project: Asbestos Abatement  
20 East Main Street  
Marshalltown, Iowa 50158
- B. OWNER: Not yet known  
Consultant: Not yet determined
- C. The work includes removal and disposal of Asbestos Containing Materials (ACMs) from 20 East Main Street, Marshalltown, Iowa 50158 that are to be disturbed as part of building renovations. Specifications for asbestos removal includes both friable and nonfriable ACMs. All ACMs removed from the property must be disposed of at a permitted facility that accepts asbestos. All materials removed from the property shall be done in accordance with local, state, and federal regulations.

##### 1.02 CONTRACTS

- A. Perform Work under a lump sum cost contract with the OWNER. Contractor may subcontract a portion or portions of Work as provided in these specifications to fulfill the terms of the Contract. Under no circumstances does the subcontracted Work relieve the Contractor from fulfilling the terms of the Contract.

##### 1.03 COMMENCEMENT OF THE WORK

- A. The Contractor shall not commence Work nor allow Subcontractors or Sub-subcontractors to commence Work until:
  - 1. The Agreement has been fully executed.
  - 2. The OWNER has approved the Contractor's Performance and Maintenance and Payment Bonds, if required.
  - 3. The OWNER has approved evidence of the Contractor's Liability Insurance and other insurance required to be purchased by the Contractor, if required. A complete description of the policy is required in addition to the OWNER being listed as an additional insured.
  - 4. The OWNER has issued a Notice to Proceed.
  - 5. The OWNER has the right to postpone abatement or delay the construction schedule as it relates to the abatement.

##### 1.04 COMPLETION TIME

- A. Work under the proposed Contract Documents shall commence immediately after receipt of the Notice to Proceed and shall be completed and ready for use or operation, subject to any extension of time which may be granted by the OWNER, as agreed upon with the OWNER.

##### 1.05 OWNER OCCUPANCY

- A. The OWNER shall have the right to take possession of and use any completed or partially completed portions of the building upon completion of air testing.

#### **1.06 CONTRACTOR USE OF SITE AND PREMISES**

- A. General: Contractor shall have full use of premises for abatement operations, including use of project site, during the abatement period. Contractor's use of premises is limited only by OWNER'S right to perform Work or to retain other contractors on portions of project.
- B. Use of Site: Limit use of premises to areas within the Contract limits indicated. Do not disturb portions of project site beyond areas in which the Work is indicated.
- C. Driveways and Entrances: Keep driveways, access easements, and entrances serving premises clear and available at all times. Do not use these areas for parking or storage of materials.

#### **1.07 WORKING HOURS**

- A. The Contractor's hours of operations are as indicated in the Special Provisions.
- B. The Contractor must request to the OWNER, in writing, 48 hours in advance of any deviation to these hours, such as outside of specified Work hours or Holiday Work. The Contractor is responsible for all additional expenses due to additional Work hours. This includes, but is not limited to: OWNER'S Consultant, Testing Laboratory personnel, etc. Such additional charges shall be a subsidiary obligation of Contractor and no extra payment shall be made by OWNER on account of such overtime Work.
- C. Contractor shall secure the site when not working or working after standard working hours.

#### **1.08 WORK RESTRICTIONS**

- A. Existing Utility Interruptions: Do not interrupt utilities serving facilities occupied by adjacent owners, tenants, or others unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated.
  - 1. Notify CITY not less than 48-hours in advance of proposed utility interruptions.
  - 2. Do not proceed with utility interruptions without CITY'S written permission.
- B. Haul Routes:
  - 1. In accordance with Section 02 81 00 – Transportation and Disposal of Hazardous Materials.

#### **1.09 WORK SEQUENCE**

- A. Coordinate abatement schedule and operations with OWNER.

#### **1.10 PERMITS, FEES AND NOTICES**

- A. The Contractor shall secure and pay for all permits and governmental fees, licenses and inspections for the proper execution and completion of the Work which are customarily secured after execution of the Contract and which were legally required at the time bids were received.

### **PART 2 PRODUCTS**

(Not Used)

### **PART 3 EXECUTION**

(Not Used)

**END OF SECTION**

**SECTION 01 30 00**  
**ADMINISTRATIVE REQUIREMENTS**

**PART 1 GENERAL**

**1.01 SUMMARY**

- A. Section Includes:
  - 1. Materials Survey.
  - 2. Meetings.
  - 3. Submittals.

**1.02 MEASUREMENT AND PAYMENT**

- A. Work specified in this section is included in the lump sum contract price.

**PART 2 PRODUCTS**

(Not Used)

**PART 3 EXECUTION**

**3.01 MATERIALS SURVEY**

- A. Project is based on known items and quantities as of the time and date of this project manual. The Contractor is to verify all quantities identified within the Project Manual. Costs for additional survey services shall be the responsibility of the Contractor.

**3.02 PRECONSTRUCTION MEETING (IF REQUIRED/NECESSARY)**

- A. OWNER or Consultant will schedule a meeting after Notice of Award.
- B. Attendance Required:
  - 1. OWNER.
  - 2. Consultant.
  - 3. Contractor.
  - 4. Contractor's Superintendent.
  - 5. Major Subcontractors.
- C. Agenda:
  - 1. Submission of list of Subcontractors, list of products, schedule of values, and progress schedule.
  - 2. Designation of personnel representing the parties in Contract and the OWNER or Consultant.
  - 3. Procedures and processing of field decisions, submittals, substitutions, applications for payments, proposal request, Change Orders, and Contract closeout procedures.
  - 4. Use of premises by OWNER and Contractor.

5. OWNER'S Requirements.
  6. Facilities and controls provided by OWNER.
  7. Temporary utilities provided by OWNER/Contractor.
  8. Security and housekeeping procedures.
  9. Scheduling.
  10. Procedures for maintaining record documents.
- D. Contractor shall record minutes and distribute copies within seven days after meeting to participants, with copies to OWNER, Consultant, participants, and those affected by decisions made.

### **3.03 PROGRESS MEETINGS**

- A. Progress meetings will not be required for this project.

### **3.04 SUBMITTALS**

- A. Required submittals are specified in individual sections.

### **3.05 NUMBER OF COPIES OF SUBMITTALS**

- A. Documents for Review: Submit the number of copies as required by the OWNER.
- B. Documents for Information: Submit the number of copies as required by the OWNER.

### **3.06 SUBMITTAL PROCEDURES**

- A. Transmit each submittal with Contractor's standard submittal form, if provided.
- B. Schedule submittals to expedite the project and deliver. Coordinate submission of related items.

### **3.07 RE-SUBMITTALS**

- A. Re-submittals will be handled in the same manner as first submittals. On re-submittals, direct specific attention, in writing on the transmittal letter and on re-submitted shop drawings by use of revision triangles or other similar methods, to revisions other than the corrections requested by the OWNER or Consultant, on previous submissions. Any such revisions which are not clearly identified shall be made at the risk of the Contractor. Make corrections to any Work done because of this type revision that is not in accordance to the Contract Documents as may be required by the OWNER or Consultant.

**END OF SECTION**

**SECTION 01 50 00**  
**TEMPORARY FACILITIES AND CONTROLS**

**PART 1 GENERAL**

**1.01 SUMMARY**

A. Section Includes:

1. Temporary abatement facilities for OWNER and Contractor including telephone, water, sanitary, security, temporary fencing, parking and field office.
2. Requirements to minimize pollution of air, water, or land, control of noise, and the disposal of solid waste materials.
  - a. Solid waste disposal.
  - b. Control of chemical waste.
  - c. Control of dust.
  - d. Control of noise.
  - e. Protection of roadways.

**1.02 MEASUREMENT AND PAYMENT**

- A. Work specified in this section is included in the lump sum contract price.

**1.03 QUALITY ASSURANCE**

- A. Items provided under this section shall be listed and labeled by UL or other Nationally Recognized Testing Laboratory (NRTL).
1. Term "NRTL" shall be as defined in OSHA Regulation 1910.7.
  2. Terms "listed" and "labeled" shall be as defined in National Electrical Code, Article 100.
- B. Comply with federal, state, and local codes and regulations, and with utility company requirements.

**1.04 SUBMITTALS**

- A. Submit in accordance with Section 01 30 00 – Administrative Requirements.

**PART 2 PRODUCTS**

**2.01 TEMPORARY UTILITIES**

- A. OWNER or Contractor shall provide and pay for all electrical power and lighting required for abatement purposes.

**2.02 TEMPORARY TELEPHONE SERVICE**

- A. A cellular phone shall be acceptable as temporary phone service. Provide telephone number(s) at which responsible representatives of Contractor can be reached evenings, weekends and holidays.

**2.03 TEMPORARY WATER SERVICE**

- A. OWNER or Contractor shall provide and pay for water service and all water used.

#### **2.04 TEMPORARY SANITARY FACILITIES**

- A. OWNER or Contractor to provide and maintain temporary toilet facilities and enclosures for Contractor's workers, OWNER'S personnel, and testing firm personnel working at project site. Provide at time of project mobilization and maintain until project completion.
- B. Portable toilets with hand sanitizer shall be acceptable. Comply with all applicable codes and regulations. Arrange for regular cleaning and/or replacement of portable toilets.
- C. Maintain daily in clean and sanitary condition.

#### **2.05 TEMPORARY FENCE AND GATES**

- A. Provide temporary fencing as required by OSHA or as needed to prevent unauthorized entry to construction areas and to protect existing facilities and adjacent properties from damage from construction operations.
- B. Materials shall be sufficiently durable to be effective for duration of construction period.

#### **2.06 FIELD OFFICES AND BUILDINGS**

- A. If desired by Contractor, erect where designated by OWNER, and maintain in good condition, temporary field office, tool, and storage building(s) for Contractor's use. Buildings are not required and cost is incidental to the project.
  - 1. Tool storage building(s) shall be of ample size to provide space for tools and equipment.
  - 2. Building(s) shall be neat and well-constructed, surfaced with plywood, drop siding, Masonite or other similar material, well painted and void of advertisements.

### **PART 3 EXECUTION**

#### **3.01 GENERAL**

- A. Employ and utilize environmental protection methods, obtain all necessary permits, and fully observe all local, state, and federal regulations. Contractor shall be responsible for any and all fines imposed by any regulatory agency due to the Contractors activities.

#### **3.02 WATER CONTROL**

- A. Conform to the regulations and requirements of legally authorized surface water management agencies.
- B. Protect site from puddling or running water. Provide water barriers as required to protect property from water damage.
- C. Water utilized for asbestos removal must be containerized and properly disposed of at a permitted facility unless field filtered in accordance with local, state and federal regulations.

#### **3.03 SOLID WASTE DISPOSAL**

- A. Contractor Generated:
  - 1. Collect solid waste on a daily basis.

2. Solid waste generated off-site shall not be brought onto or accepted at the site as part of this Contract.
3. Refer to individual specification sections for disposal requirements for other solid waste, debris, and ACM.

### **3.04 CONTROL OF DUST**

- A. The control of dust shall mean that no abatement activity shall take place without applying all such reasonable measures as may be required to prevent particulate matter from becoming airborne so that it remains visible beyond the limits of construction.
- B. Utilize methods and practices of abatement to eliminate dust in full observance of agency regulations.

### **3.05 PROTECTION OF AIR QUALITY**

- A. Minimize air pollution by requiring use of properly operating combustion emission control devices on abatement vehicles and equipment and encourage shutdown of motorized equipment not in use.
- B. Do not burn trash at project site.

### **3.06 CONTROL OF NOISE**

- A. Conduct operations to cause least annoyance to residents in vicinity of Work and comply with applicable local ordinances.
- B. Equip compressors, hoists, and other apparatus with mechanical devices necessary to minimize noise and dust. Equip compressors with silencers on intake lines.
- C. Equip gasoline or oil-operated equipment with silencers or mufflers on intake and exhaust lines.
- D. Route vehicles carrying soil, debris, or other material over such streets as will cause least annoyance to public and do not operate on public streets outside of times specified in General Requirements

### **3.07 PROTECTION OF ROADWAYS & PARKING AREAS**

- A. Contractor is responsible for maintenance and restoration of public roads used for hauling of materials and equipment to and from the site.
- B. Contractor shall clean debris resulting from operations on the haul roads on a daily basis.
- C. The Contractor shall not utilize local storm sewer inlets to wash and remove debris from the haul roads.
- D. All hauling operations on- and off-site shall be completed in a manner that minimizes deposition of litter and debris on adjacent roadways.

### **3.08 SECURITY**

- A. Contractor must leave the property secured to protect Work, existing facilities, and OWNER'S operations from unauthorized entry, vandalism, or theft.
- B. Coordinate with CITY'S police department and fire department.

### **3.09 CLEAN UP**

- A. Building:

1. Contractor is to remove any debris generated from the abatement on daily basis and may not stockpile job related materials in common areas of the building during the project.

### **3.10 REMOVAL OF UTILITIES, FACILITIES, AND CONTROLS**

- A. Remove temporary utilities, equipment, facilities and materials prior to Final Application for Payment inspection.
- B. Clean and repair damage caused by installation or use of temporary Work.

### **3.11 COMPLETION OF WORK**

- A. Upon completion of Work, leave area in a clean, natural looking condition.
- B. Remove all signs of temporary construction and activities incidental to construction of required permanent Work

**END OF SECTION**

**SECTION 02 81 00**  
**TRANSPORTATION AND DISPOSAL OF HAZARDOUS MATERIALS**

**PART 1 GENERAL**

**1.01 SUMMARY**

A. Section Includes:

1. Requirements for the transportation and disposal of materials generated during this project which require off-site disposal and/or treatment. Materials that will or may be found on-site requiring off-site recycling or disposal include:
  - a. Rubbish, trash, and miscellaneous garbage.
  - b. Asbestos containing materials (ACM).
  - c. Miscellaneous building debris and rubble.
- B. Furnish all labor, equipment, materials and incidentals required to transport all materials required to be recycled or disposed of off-site.

**1.02 MEASUREMENT AND PAYMENT**

- A. Work specified in this section is included in the lump sum contract price.

**1.03 SUBMITTALS**

A. Within 10 days after Notice to Proceed:

1. Names and locations of all facilities proposed to be used for the disposal of materials off-site.
2. Acceptance criteria, if any for each type of waste stream at each facility proposed.
3. Sampling and analytical criteria, if any, for each type of waste stream at each facility proposed.
4. Any other restrictions which may be imposed by each of the proposed facilities.

B. As the Work proceeds:

1. Blank sample of shipping documents and disposal manifests for each type of waste stream a minimum of three days prior to their proposed date of use.
2. Copies of all waste profile forms, waste disposal manifests, and bills of lading required by the disposal facilities.
3. Copies of certificates of disposal, destruction, treatment, recycling as applicable and as issued by the disposal facility following acceptance and final disposition of the various waste streams.
4. Proposed transportation routes and alternate transportation routes to each disposal facility.

C. At Contract Closeout:

1. Summary spreadsheet of all waste and recyclable materials hauled from the site, quantities, and identification of the disposal, recycle, or salvage facility.

**1.04 QUALITY ASSURANCE**

- A. Ensure each facility possess all necessary permits required for accepting and disposing of wastes and that these permits are current.
- B. Use only disposal facilities approved for performance of Work.
- C. Contractor shall have responsibility to meet requirements of these Specifications, and acceptance of bid does not constitute nor imply approval of proposed off-site waste disposal facility(ies).
- D. OWNER may contact disposal facility, as appropriate, to assess compliance status.
- E. In event that identified and approved facility ceases to accept stated waste materials or facility ceases operations, it is Contractor's responsibility to locate alternate approved and permitted facility for accepting waste materials.
- F. Originate, maintain, and provide OWNER or Consultant with copies of waste shipment manifest records for all waste materials transported off-site. Contractor shall verify nature and quantity of wastes shipped on each load. Manifest forms and records shall be consistent with requirements of RCRA, U.S. DOT regulations, and state requirements. OWNER shall be designated generator for purposes of transport manifest.
  - 1. Provide OWNER with written documentation verifying receipt of each load at designated treatment or disposal facility and verification of proper treatment or disposal.
  - 2. Notify OWNER immediately if Contractor fails to receive "Notification of Receipt" of any waste shipment within reasonable time frame approved by OWNER or Consultant. Contractor shall undertake whatever actions are necessary to determine status of shipment and remedy situation.

#### **1.05 REFERENCE STANDARDS**

- A. Comply with all applicable federal, state and local laws, codes and ordinances which govern or regulate waste transportation and disposal. Regulations regarding transportation and final disposal of wastes at minimum include but are not limited to the following:
- B. United States Federal Government – Code of Federal Regulations (CFR)
  - 1. 29 CFR Occupational Safety and Health Standards
  - 2. 49 CFR 387 (46 CFR 30874, 47073)
  - 3. Department of Transportation DOT-E 8876
  - 4. 40 CFR 136 Guidelines Establishing Test Procedures for Analysis of Pollutants
  - 5. 40 CFR 261 Identification and Listing of Hazardous Waste
  - 6. 40 CFR 262 Standards Applicable to Generators of Hazardous Waste
  - 7. 40 CFR 263 Standards Applicable to Transporters of Hazardous Waste
  - 8. 40 CFR 264 Standards for Owners and Operators of Hazardous Waste Treatment, Storage and Disposal Facilities
  - 9. 40 CFR 265 Interim Status Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal
  - 10. 40 CFR 266 Standards for the Management of Specific Hazardous Wastes and Specific Types of Hazardous Waste Management Facilities

11. 40 CFR 268 Subparts (C) and (D) Land Disposal Restrictions
12. 40 CFR 279 Standards for the Management of Used Oil
13. 49 CFR 107 Hazardous Materials Program Procedures
14. 49 CFR 171 General Information, Regulations and Definitions
15. 49 CFR 172 Hazardous Materials Table, Special Provisions, Hazardous Materials Communications, Emergency Response Information and Training Requirements
16. 49 CFR 173 Shippers – General Requirements for Shipments and Packaging
17. 49 CFR 177 Carriage by Highway
18. 49 CFR 178 Specifications for Packaging

## **PART 2 PRODUCTS**

### **2.01 PACKING MATERIALS**

- A. Provide all of the materials and equipment required for packaging, labeling, placarding and transportation of waste streams from the site in conformance with department of transportation, federal, state and local regulations.

## **PART 3 EXECUTION**

### **3.01 NOTIFICATION**

- A. Notify all applicable federal, state and local representatives, or any other authority which has jurisdiction over the mode and route of transport, in advance of commencing waste stream transport. Obtain all required approvals from those parties having jurisdiction over the transport.

### **3.02 MANIFESTING**

- A. Provide and prepare manifests as required for the transportation and disposal of the waste streams from the site. Waste manifests shall be completed in a form acceptable to the state and federal regulatory agencies. After completion by the Contractor, all waste manifests shall be signed by the OWNER or Consultant.

### **3.03 LABELING**

- A. Upon removal of all contaminated materials, properly label all containers or transports prior to transporting these materials for disposal. Contractor shall be responsible for labeling all containers and transports in accordance with applicable federal and state regulations.

### **3.04 TRANSPORTATION AND ENTRY/EXIT REQUIREMENTS**

- A. Transport all waste streams from the site in conformance with department of transportation, federal, state and local regulations governing the type of waste stream being transported. This includes, but not limited to, requirements for operator training and requirements for packaging, labeling, marking, placarding of various waste shipments.
- B. All waste streams shall be transported directly to the disposal facility from the site. Neither the route nor the mode of transportation shall deviate from the approved route

without prior written approval from the OWNER or Consultant.

- C. Inspect existing roadways immediately adjacent to the site and document their condition prior to project start-up. Any/all repairs or improvements, including permits and/or approvals, to accommodate off-site transportation of wastes shall be responsibility of Contractor. Provide documentation to OWNER or Consultant prior to any hauling operations.
- D. Document all entry/exit procedures for transports in Off-Site Transportation and Disposal Plan and shall instruct and provide written instructions to all transporters as to these procedures. Contractor shall see that all personnel are provided with adequate protective equipment in accordance with Contractor's health and safety plan.

### **3.05 LOADING OF MATERIALS INTO TRANSPORT CONTAINERS**

- A. Waste streams will be loaded into transport containers in a manner which minimizes the spilling of materials. Materials which have been segregated on site shall not be mixed in transport containers unless characterized as same waste type. Waste streams shall be secured in transport containers in accordance with the regulations which govern the transportation of these materials. At a minimum, each load of excavated material must be covered prior to leaving the site. Materials shall be loaded into transport containers in manner which does not damage any polyethylene sheeting or other protective liner installed. Transport vehicles shall not be driven over waste streams stockpiled on site or contaminated material which will be excavated during the completion of the Work.
- B. Furnish, install, and maintain any on-site temporary loading facilities as required.
- C. Provide equipment, personnel, and on-site facilities necessary to handle and load waste materials designated for off-site transport.
- D. Ensure that all waste materials loaded for off-site transportation have been accurately identified and are in compliance with appropriate state and federal regulations.
- E. Each container shall be visually inspected upon loading to ensure it is properly sealed and there are no signs of spillage or leakage. All vehicles hauling bulk wastes from the site shall be inspected by the Contractor prior to leaving the site. Contractor shall certify proper containerization for each transporter leaving the site.
- F. Containers found to be leaking or bulk transports found leaking shall not be loaded until source of leaking is located and source contained. Area where leaking occurred, and any contaminated equipment shall be decontaminated.
- G. Contractor shall be responsible for any and all cleanup activities involving waste spilled in transit or during loading operations and shall be at the Contractor's expense.
- H. Contractor shall be responsible for verifying appropriate container sizes for off-site disposal in accordance with Federal Department of Transportation (DOT), state, and local regulations. Any requirements and expenses for oversize load are Contractor's responsibility.

### **3.06 HAULING REQUIREMENTS**

- A. Implement hauling or transport schedule which minimizes congestion on and around site.
- B. Obtain and prepare manifest forms, obtain waste code numbers, and complete waste shipment records as required by State of Iowa and 40 CFR 261 for verifying waste type and quantity of each load transported off-site. Manifest form shall be verified by OWNER or Consultant and copies of each manifest retained by OWNER or Consultant following

shipment.

- C. OWNER or Consultant will provide hazardous waste generator identification number and/or EPA identification number (for hazardous waste only) pursuant to 40 CFR 261 for use on manifest, if required.
- D. OWNER or Consultant will sign hazardous waste manifest as generator.
- E. Transport waste from site only to those facilities listed on manifest.
- F. Routes and timing must be coordinated with appropriate state regulatory agencies. All highway and road restrictions shall be adhered to by Contractor.

### **3.07 VEHICLE DECONTAMINATION**

- A. Decontaminate transport vehicles and containers in a designated decontamination area prior to their leaving the site. Decontamination shall include the removal of material on the tires and axles of trucks and any other material on the vehicle as a result of loading operations.

### **3.08 OFF-SITE DISPOSITION**

- A. Dispose the various waste streams at preapproved facilities. All waste facilities must have a valid facility permit from the regulating authority (U.S. or state) for that type of facility and for the type of waste which will be received. All disposal facilities must be constructed in a manner which meets or exceeds the requirements of federal regulations governing the type of disposal facility.

**END OF SECTION**

**SECTION 02 82 00**  
**ASBESTOS REMEDIATION**

**PART 1 GENERAL**

**1.01 SUMMARY**

A. Section Includes:

1. Removal, Cleanup and Disposal of Asbestos Containing Material (ACM).
2. Applicable Standards and Guidelines.

**1.02 MEASUREMENT AND PAYMENT**

A. The asbestos quantities shown below are approximate only but are considered sufficiently adequate for the purpose of comparing bids. The Contractor is responsible for verification of all materials and quantities listed below. Asbestos abatement bids may be for all asbestos identified below or only asbestos that is to be disturbed as part of building renovations. OWNER will specify materials to be abated. No additions to the contract will be allowed for additional ACMs discovered that amount to less than 10% of each material listed below. If additional amounts greater than 10% are identified, Contractor is to stop Work and notify the OWNER and Consultant immediately.

**Asbestos Containing Materials Sample List**

| Sample #   | Material Substance     | Color | Floor     | Location                                   | Asbestos Content | Est. Quantity     |
|------------|------------------------|-------|-----------|--------------------------------------------|------------------|-------------------|
| 20E-02 ABC | Boiler Insulation      | Gray  | B         | Room 19 on Boiler                          | 75% Chrysotile   | 110 SF            |
| 20E-03 ABC | Joint Mud              | White | B         | Throughout Basement                        | 30% Chrysotile   | 40 EA             |
| 20E-04 ABC | Pipe Insulation        | Gray  | B         | Throughout Basement                        | 65% Chrysotile   | 90 LF             |
| 20E-05 ABC | Duct Wrap              | White | B         | On Old Duct Locations                      | 70% Chrysotile   | 40 SF             |
| 20E-10 ABC | Tar Pipe Wrap          | Black | B         | North Side Main Room                       | 2% Chrysotile    | 15 LF             |
| 20E-12     | Drywall Compound       | White | B         | Middle Basement Stairs                     | <1% Chrysotile   | 400 SF            |
| 20E-35     | Window Glaze           | Tan   | 1         | Room 2 North Window                        | <1% Chrysotile   | 8 LF              |
| 20E-36     | Window Glaze           | Gray  | 1         | Room 2 North Window                        | <1% Chrysotile   | 8 LF              |
| 20E-40     | 9" Floor Tile Adhesive | Brown | 1         | Room 4 Near North Entrance                 | <1% Chrysotile   | 25 SF             |
| 20E-46     | 9" x 9" Floor Tile     | Tan   | Mezzanine | Room 8                                     | 3% Chrysotile    | 300 SF            |
| 20E-51     | 12" x 12" Floor Tile   | Tan   | 2         | Room 15 & Throughout 2 <sup>nd</sup> Floor | 3% Chrysotile    | 2,400 SF          |
| 20E-57     | 12" x 12" Floor Tile   | Gray  | 2         | Randomly In Room 14                        | 3% Chrysotile    | Included in Above |
| 20E-58     | 12" Floor Tile Mastic  | Black | 2         | Randomly in Room 14                        | <1% Chrysotile   | 20 SF             |
| 20E-60     | Drywall Compound       | White | 2         | 2 <sup>nd</sup> Floor Walls                | <1% Chrysotile   | 1,500 SF          |
| 20E-63     | Window Frame Caulk     | White | Exterior  | Brick Window Union                         | <1% Chrysotile   | 20 LF             |
| 20E-65     | Brick Caulk            | Gray  | Exterior  | South Entrance on Top of Brick Façade      | 2% Chrysotile    | 2 LF              |

Note: Roofing materials were not sampled at the request of the City for integrity reasons. If roofing materials are to be disturbed, samples must be collected and analyzed for

asbestos content.

### **1.03 DESCRIPTION**

- A. The work includes removal and disposal of Asbestos Containing Materials (ACMs) from 20 East Main Street, Marshalltown, Iowa 50158 that are to be disturbed as part of building renovations. Specifications for asbestost removal includes both friable and nonfriable ACMs. All ACMs removed from the property must be disposed of at a permitted facility that accepts asbestos. All materials removed from the property shall be done in accordance with local, state, and federal regulations.
  - 1. Contractor is responsible for verifying quantities of all materials OWNER is requesting be abated.
  - 2. No additional compensation will be made for materials not included in Contractor's lump sum bid.

### **1.04 REFERENCE STANDARDS**

- A. Title 29, Code of Federal Regulations, Sections 1910.1001, 1910.134, 1910.2, 1910.1200 and 1926.58. Occupational Safety and Health Administration (OSHA), US Department of Labor.
- B. Title 40, Code of Federal Regulations, Part 61, Subparts A and M, National Emission Standards for Hazardous Air Pollutants. U.S. Environmental Protection Agency.
- C. Title 40, Code of Federal Regulations, Part 763, Subparts E and G, Asbestos Abatement Project.
- D. Chapter 88B of the Code of Iowa, removal or Encapsulation of Asbestos.
- E. Chapter 81 of the Iowa Administrative Code, Asbestos Control Procedures, Iowa Bureau of Labor.
- F. Iowa Bureau of Labor Guidelines for removal of Asbestos, Chapter 155.
- G. 29 CFR 1926 - U.S. Occupational Safety and Health Standards; current edition.
- H. Title Code of Federal Regulations Part 763, Asbestos Containing Materials in Schools.
- I. EPA Guidance Document: Asbestos Waste Management Guidance (Blue Book).

### **1.05 SUBMITTALS**

- A. Pre-Abatement
  - 1. Provide OWNER with a copy of written notification to federal and state agencies (IDNR 10-Day Notification).
  - 2. Submit a list of all personnel who will be involved in the abatement activity including, supervisors, workers, and any other personnel or agent who may be responsible for any aspect of the abatement activities. The list shall include all personnel's Asbestos Abatement Certification numbers and expiration dates. No personnel may be on-site if not certified.
  - 3. Submit shop drawings for layout and construction of decontamination enclosure systems and barriers for isolation of the Work areas detailed in this Specification and required by applicable regulations if necessary.

4. With the OWNER or Consultant, inspect the premises wherein all abatement and abatement related activities will occur and submit a statement signed by both, agreeing on property condition prior to the commencement of the Work.
- B. Abatement activities:
1. Contractor shall submit, as required by the OWNER, job progress reports detailing abatement activities.
  2. Contractor shall keep daily copies of Work site entry logbooks with information on worker and visitor access. This must include the names and certification numbers and an outline of Work accomplished by those who enter.
  3. Contractor shall submit a copy of emergency procedures.
  4. Contractor shall record a log of all personnel who enter the Work area which will be made available to the OWNER or Consultant upon request.
  5. Submit copies of all transport manifests, trip tickets and disposal receipts for all asbestos waste materials removed from the Work area during the abatement process within seven (7) calendar days of completion of project.
  6. The project will not be considered complete until all submittals are received by the OWNER, which will affect payment for the project.

## **1.06 QUALITY ASSURANCE**

- A. Asbestos Firm Qualifications: An experienced firm that has specialized in asbestos abatement Work similar in size and scope to that indicated for this project.
1. Asbestos abatement workers must be licensed by the Iowa Division of Labor for the purpose of removal, encapsulation, enclosure, demolition, and maintenance of structures or components covered by or composed of asbestos containing materials.
- B. Regulatory Requirements: Comply with governing OSHA, IDNR and U.S. EPA notification regulations before beginning renovation or demolition activities. Comply with hauling and disposal regulations of authorities having jurisdiction.
- C. Pre-Abatement Conference: Attend conference at project site if required by the OWNER.

## **PART 2 PRODUCTS**

### **2.01 MATERIALS**

- A. The Contractor shall provide all materials and supplies necessary to complete the project.
- B. Store all materials so as to prevent damage or contamination.
- C. Damaged or deteriorating materials shall not be used.
- D. Containment materials shall be a minimum of 4 mil thick for walls and covering stationary objects. Containment materials for floors and other uses shall be at least 6 mil in thickness.
- E. Disposal bags shall be a minimum of 6 mil in thickness, pre printed with labels as required by 40 CFR 61.22(j)(3)(i)(C) and 49 CFR Part 172.
- F. Disposal drums shall be metal or fiberboard with locking ring tops. Stick on labels

conforming to (E) shall be applied.

G. Warning signs as specified by OSHA 29 CFR 1910.1001(j)(1)(ii) shall be used.

H. Surfactant shall be a 50/50 mixture of polyoxyethyleneether and polyoxyethylene ester, or equivalent, mixed 1 fluid ounce to 5-gallon proportion, or as specified by the manufacturer.

## **2.02 EQUIPMENT**

### **A. General**

1. The Contractor shall supply all tools and equipment necessary to complete the project.
2. A sufficient quantity of HEPA filtered air filtration units must be utilized to maintain required air exchanges.
3. Full body disposable protective clothing impenetrable to asbestos shall be provided to authorize personnel as needed.
4. Approved safety equipment shall be provided as needed.
5. Equipment needed to complete the project such as scaffolds (may not be wood per the Fire Prevention Bureau (FPB) Policy 2011-3), ladders, and hand tools, and other tools shall be provided as needed.
6. HEPA filtered vacuums shall be available as needed during the project.

### **B. Respiratory Equipment**

1. Respiratory protection in compliance with applicable OSHA regulations shall be provided.
2. For Class I work, the abatement workers and supervisors shall wear, at a minimum, powered air-purifying respirators with appropriate HEPA filters until such time that personal and short-term excursion limit samples show airborne asbestos levels of 0.3 f/cc or less. After these levels are achieved, the abatement workers and supervisors may switch to 1/2 face negative pressure respirators. If airborne asbestos levels reach a level of over 0.3 f/cc, PAPR's must again be utilized.

### **C. Protective Clothing**

1. Disposable clothing including head, and foot protection shall be provided in sufficient quantities and adequate sizes for all workers and authorized visitors.
2. Launderable clothing, if required, shall be provided in sufficient quantities and adequate sizes for all workers and authorized visitors.
3. Hard hats, protective eyewear, gloves, rubber boots, and/or other footwear shall be provided as required for workers and authorized visitors. Safety shoes may be required for some activities.

## **PART 3 EXECUTION**

### **3.01 EXAMINATION**

- A. Survey existing conditions and correlate with requirements indicated to determine extent of asbestos abatement required.

- B. Contractor to verify all quantities of ACM.

### **3.02 PREPARATION**

- A. The Contractor shall post signs at all entrances to the job site, or 20 feet from the Work area at 30-foot intervals around the perimeter of the job site. Contractor must leave the property secured to protect the Work area.
- B. The Contractor will shut off and lock out all electric power feeding the job site. The Contractor will then provide temporary power together with ground fault circuit interrupters to supply the electrical needs of the project. The OWNER or Contractor will provide electrical power.
- C. All alterations to the Work area for purposes of containment set up or removal shall be the responsibility of the Contractor unless agreed upon previously with the OWNER.
- D. The Contractor will shut down and lock out all HVAC systems that supply or pass through the Work area. Seal all vents with tape and two layers of six mil polyethylene (poly).
- E. The Contractor will arrange for sanitary facilities for abatement personnel outside the Work area and maintain them in a sanitary condition.
- F. The Contractor is responsible for providing water for project purposes.
- G. The Contractor will preclean all movable objects in the Work area and remove them to an uncontaminated area.
- H. The Contractor shall preclean all fixed objects and surfaces in the Work area. After precleaning, enclose fixed objects in at least six mil poly sheeting and seal securely with tape. Use the precleaning form in this specification to record the date, method, area, and identity of the supervisor.
- I. The Contractor shall cover floors in the work area with two layers of six mil poly. Floor material shall extend at least 12 inches up side walls. Seams that may allow leakage will be minimized and staggered.
- J. The Contractor shall cover walls in the work area with two layers of six mil poly. Wall material shall overlap floor materials by at least 12 inches.
- K. The Contractor shall provide a worker decontamination system where workers will enter and exit the work area.
- L. Any negative pressure containment must be smoke tested at the beginning of every shift and documented.

### **3.03 GENERAL PROCEDURES**

#### **A. Removal of ACM**

1. Wet all asbestos containing material with water or an amended water solution using equipment capable of providing a fine spray mist, in order to reduce airborne fiber concentrations when the material is disturbed. Saturate the material, however, do not allow excessive water to accumulate in the Work area. Keep all removed material wet enough to prevent fiber release until it can be containerized for disposal. Wetting procedures are not equally effective on all types of asbestos containing materials but shall be used in all cases.
2. Saturated asbestos containing material shall be removed in manageable sections. Removed material should be containerized before moving to a new location for

continuance of Work. Surrounding areas shall be periodically sprayed and maintained in a wet condition until visible material is cleaned up.

3. Material removed from each Work area shall not be dropped or thrown into disposal trucks or bins. Material should be removed as intact sections or components whenever possible and carefully lowered to the truck or bin container.
4. Each Work area shall be cleaned until it is free of ACM and/or contaminated debris or until approved by Consultant. Consultant may be on-site to conduct visual survey of each work area that has been abated and may also collect PCM Final Clearance air monitoring samples. Should any visible residue remain, including nails or staples, it will be assumed to be asbestos and the work area will be recleaned by the Contractor and reinspected. A visual inspection form will be signed by the Contractor and Consultant following passing of a visual inspection, if conducted. If PCM air monitoring samples are collected and fail, Contractor will be responsible for recleaning the work area and removing porous materials from work area prior to a retesting.
5. Following passing of a visual inspection, if conducted, the containment material may be removed.

#### B. Disposal of ACM

1. As the Work progresses, to prevent exceeding available storage capacity on-site, sealed and labeled containers of asbestos containing waste shall be removed and transported to the prearranged disposal location.
2. Disposal must occur at an authorized site in accordance with regulatory requirements of NESHAPS and applicable state and local guidelines and regulations.
3. All Waste Shipment Records shall be delivered to the OWNER. A recommended record keeping format utilizes the Waste Shipment Record (WSR) which includes the names and addresses of the Generator (OWNER), Contractor, Transporter, and Disposal Site, the estimated quantity of the asbestos waste and the type of containers used. The form should be signed by the Contractor, the Transporter and the Disposal Site Operator, as the responsibility for the material changes hands. Instructions can be found with the Waste Shipment Records.
4. The Contractor and Transporter should retain a copy of the WSR upon completing their portion of it. The Disposal Site Operator should retain a copy and return a completed copy to the Generator within 45 days of the ACM leaving the project area.
5. All ACM that is readied for transport must be labeled with the name of the waste generator and the location at which the waste was generated. The contractor is responsible for providing the label.
6. Once debris have been removed from the Work area, they shall be loaded into a lined or enclosed truck for transportation.
7. The enclosed cargo area of the truck shall be free of debris and lined with six mil poly sheeting to prevent contamination from leaking or spilled containers. Floor sheeting shall be installed first and extend up the side walls. Wall sheeting shall be overlapped and taped into place.
8. Any debris or residue observed on containers or surfaces outside of the Work area resulting from cleanup or disposal activities shall be immediately cleaned up using

HEPA filtered vacuum equipment and/or wet methods as appropriate.

### **3.04 ABATEMENT PROCEDURES**

#### **A. Class I Work**

##### **1. Removal of Asbestos Containing Materials**

- a. The Contractor shall wet all asbestos materials with amended water and saturate it to the substrate. Saturate the asbestos material sufficiently so that at no time will there be fiber release from dry asbestos. Misting or spraying may be used to assist in fiber settling.
- b. Immediately following removal, wet asbestos shall be packed into bags or drums. Seal containers and move them to the waste container airlock. Bags should not be overfilled. Asbestos waste with sharp components shall be contained in drums before removal from the Work area.
- c. Asbestos material shall not be dropped or thrown to the floor. Material should be removed as intact sections or components whenever possible and carefully lowered to the floor. If this cannot be done for materials greater than 50-feet above the floor, a dust-tight chute shall be constructed to transport the material to containers on the floor or the material may be containerized at elevated levels (e.g., on scaffolds) and carefully lowered to the ground by mechanical means. For materials between 15 and 50 feet above the ground, they may be containerized at elevated levels or dropped onto inclined chutes or scaffolding for subsequent collection and containerization.
- d. Bags of asbestos waste shall be removed from Work area at the end of each shift to prevent water leakage.
- e. Surfaces from which asbestos was stripped shall be brushed or hand cleansed until no visible asbestos residue remains.
- f. Special circumstances (e.g., live electrical equipment or live steam lines) may prohibit the adequate use of wet methods to reduce fiber concentrations. For these situations, a dry removal may be required. The contractor will have to acquire special permits, different from those mentioned herein from the NESHAP enforcement agency.

##### **2. Clean-up Procedures**

- a. Collect and containerize all visible accumulations of asbestos containing materials and debris.
- b. Wet clean all surfaces in the Work area using rags, mops, or sponges, as appropriate.
- c. Remove all containerized waste from the Work area and waste container airlock.
- d. Decontaminate and remove all unnecessary tools and equipment.
- e. Inspect the Work area for visible residue. If any accumulation of residue is observed, it will be assumed to be asbestos and the Work area shall be recleaned.
- f. Apply a thin coating of an encapsulating agent to all surfaces in the Work area to seal in non-visible residue. The Contractor shall verify the compatibility of any encapsulating agent with future replacement material.

B. Class II Asbestos Work - Flooring

1. Resilient flooring shall be removed by wetting the sharp point where the material will be cut and during delamination. Rip-up of resilient flooring is prohibited.
2. Mechanical chipping is prohibited unless performed in a NPE.
3. Tiles shall be removed intact unless the employer demonstrates that intact removal is not possible.
4. The regulated areas are to be established and all removal workers are to wear appropriate respirators and protective clothing.

C. Class II Asbestos Work - Roofing

1. Roofing material shall be removed intact to the extent possible.
2. Cutting machines shall be continuously misted during use, unless misting substantially decreases worker safety.
3. All loose dust left from cutting operations must be immediately HEPA vacuumed.
4. Unwrapped or unbagged roofing material must immediately be lowered to the ground via covered, dust-tight chute, crane or hoist, or wrapped in plastic sheeting and lowered to the ground no later than the end of the Work shift.
5. Upon being lowered to the ground, unwrapped material shall be transferred to a closed receptacle in such a manner as to preclude the dispersion of dust.
6. Roof level heating and ventilation air intake sources shall be isolated or the ventilation system shall be shut down.
7. The regulated areas are to be established and all removal workers are to wear appropriate respirators and protective clothing.

D. Class II Asbestos Work - Siding, shingles, or transite panels

1. Cutting, abrading, or breaking of these materials shall be prohibited unless the employer can demonstrate that other methods less likely to release asbestos fibers cannot be used.
2. Each panel or shingle shall be sprayed with amended water prior to removal.
3. Unwrapped or unbagged panels or shingles must immediately be lowered to the ground via covered, dust-tight chute, crane or hoist, or wrapped in an impervious waste bag or wrapped in plastic sheeting and lowered to the ground no later than the end of the Work shift.
4. Nails shall be removed intact. If determined they are not able to be removed intact, Contractor may cut with flat, sharp instruments.
5. The regulated areas are to be established and all removal workers are to wear appropriate respirators and protective clothing.

E. Class II Asbestos Work - Gaskets

1. If a gasket is unlikely to be removed intact, removal shall be undertaken within a glovebag.
2. The gasket shall be thoroughly wetted with amended water prior to removal.
3. The wet gasket shall immediately be placed in a disposal container.

4. Any scraping to remove residue must be performed wet.
5. The regulated areas are to be established and all removal workers are to wear appropriate respirators and protective clothing.

F. Class II Asbestos Work - Other

1. The material must be thoroughly wetted with amended water prior to removal.
2. The material shall be removed in an intact manner unless the employer demonstrates that intact removal is not possible.
3. Cutting, abrading, or breaking of these materials shall be prohibited unless the employer can demonstrate that other methods less likely to release asbestos fibers cannot be used.
4. ACM removed, shall be immediately bagged or wrapped, or kept wetted until transferred to a closed receptacle, no later than the end of the Work shift.
5. The regulated areas are to be established and all removal workers are to wear appropriate respirators and protective clothing.

G. Class III Asbestos Work

1. Work shall be performed using wet methods.
2. To the extent feasible, the Work shall be performed using local exhaust ventilation.
3. Where the disturbance involves drilling, cutting, abrading, sanding, chipping, breaking, or sawing of TSI or surfacing material, the employer shall use impermeable drop cloths, and shall isolate the area using mini-containments or glovebags.
4. The employer shall contain the area using impermeable drop cloths and plastic barriers or their equivalent, or shall build an NPE.
5. The regulated areas are to be established and all removal workers are to wear appropriate respirators and protective clothing.

H. Class IV Asbestos Work

1. ACM or PACM debris will be promptly cleaned using wet methods and/or HEPA vacuuming.
2. The regulated areas are to be established and all removal workers are to wear appropriate respirators and protective clothing.
3. In areas where friable TSI or surfacing materials are located, waste and debris must be assumed to contain asbestos.

### **3.05 GLOVEBAG PROCEDURES**

- A. Glovebagging may not be performed on pipes whose temperature exceeds 150 degrees Fahrenheit.
- B. The regulated areas are to be established and all removal workers are to wear appropriate respirators and protective clothing.
- C. At least two persons shall perform the work on each individual glovebag.
- D. A protective shroud of at least six mil poly shall be placed under the glovebag area. A plastic barrier shall be utilized if the glovebag area is occupied.

- E. Loose and friable material adjacent to the glovebag is to be wrapped and sealed in two layers of six mil poly.
- F. Glove bags must be installed so that they completely cover the pipe or other structure where asbestos removal work is to be done. Glove bags shall be installed by cutting the sides of the glove bag to fit the size of the pipe from which asbestos is to be removed. The glove bag is attached to the pipe by folding the open edges together, stapling them, and securely sealing them with tape. All openings in the glove bag must be sealed with duct tape or equivalent to prevent any leakage from the bag.
- G. Each glove bag is to be smoke tested after installation on the pipe prior to beginning removal. Smoke testing will be done by the Consultant or Contractor by inserting the smoke tube through a small hole in the glove bag. The glove bag is then filled with smoke, the tube is removed, and the hole patched with duct tape. The glove bag is then squeezed. If smoke escapes from the glove bag, the leak is to be sealed. Removal may begin after completion of successful glove bag smoke test.
- H. The employees who are performing the asbestos removal with the glove bag must don at least a half mask dual-cartridge HEPA filtered respirator and wear disposable protective clothing. Respirators should be worn by employees who are in close contact with the glove bag and who may thus be exposed as a result of small gaps in the seams of the bag or holes punched through the bag by a razor knife or a piece of wire mesh.
- I. A HEPA filtered vacuum is to be inserted into the glovebag and left running continuously during the glovebag removal.
- J. The material to be removed must be adequately wetted with a wetting agent prior to removal. The removed asbestos material from the pipe or other surface must be thoroughly wetted with a wetting agent (applied with a sprayer wand inserted through a small hole cut in the bag with an airtight seal).
- K. A wetting agent must then be used to spray any layer of dry material that is exposed beneath the mesh, the surface of the stripped underlying structure, and the inside of the glove bag.
- L. After removal of the layer of asbestos containing material, the pipe or surface from which asbestos has been removed must be thoroughly cleaned with a brush and wet wiped with a wetting agent until no traces of the asbestos containing material can be seen.
- M. Any asbestos containing insulation edges that have been exposed as a result of the removal or maintenance activity must be encapsulated with bridging encapsulant to ensure that the edges do not release asbestos fibers to the atmosphere after the glove bag has been removed.
- N. When the asbestos removal and encapsulation have been completed, the bag may be removed from the pipe and sealed with tape to keep the asbestos materials safely in the bottom of the bag. The glove bag must then be double bagged in a labeled six mil poly bag, sealed, and removed from the work area to be disposed of properly.

### **3.06 SCOPE OF WORK**

#### **A. Boiler Insulation Removal**

1. Remove the asbestos containing boiler insulation. All asbestos removal work is to be done as per this specification. The Contractor is to remove all movable objects in the containment area. All objects which must remain in the containment areas are to be sealed with a minimum of one layer of six mil poly. The containments must

have a minimum of four air changes per hour and a differential pressure of 0.02 column inches of water. A full and functional three chamber decontamination unit must be attached to the containment.

The floor(s) and walls in the containment area are to have a minimum of two layers of six mil poly.

The asbestos containing material is to be wetted before and during removal. The boiler insulation is to be removed intact to the extent possible. The Contractor is responsible for cleaning up the ACM debris in the removal area by wet methods, HEPA-filtered vacuums, or a combination of each. The asbestos containing material must immediately be placed in six mil poly bags with the appropriate OSHA, DOT, and waste generator labels affixed. All disposal containers must be cleaned prior to removal from the contained area. If the contractor is using barrels, barrels must be lined with six mil poly and properly sealed and labeled. The asbestos containing material is to be disposed of at an approved landfill.

#### B. Caulk Removal (Exterior)

1. Remove the asbestos containing caulking. All asbestos removal Work is to be done as per this specification. The Contractor is to drape one layer of six mil poly on the ground around the perimeter of the building. The poly is to be draped in such a manner as to catch any asbestos debris that may be caused by the removal process.

The asbestos containing material is to be wetted before and during removal. The caulking is to be removed in an intact manner if possible. The Contractor is responsible for cleaning up the ACM debris in the removal area by wet methods, HEPA-filtered vacuums, or a combination of each. The asbestos containing material must immediately be placed in six mil poly bags with the appropriate OSHA, DOT, and waste generator labels affixed. All disposal containers must be cleaned prior to removal from the contained area. If the contractor is using barrels, barrels must be lined with six mil poly and properly sealed and labeled. The asbestos containing material is to be disposed of at an approved landfill.

If the Contractor removes windows as part of the caulk removal, they are required to re-secure the window openings with ¼" plywood.

#### C. Drywall Compound Removal

1. Remove the asbestos containing drywall compound. All asbestos removal work is to be done as per this specification. The Contractor is to remove all movable objects in the containment area. All objects which must remain in the containment areas are to be sealed with a minimum of one layer of six mil poly. The containments must have a minimum of four air changes per hour and a differential pressure of 0.02 column inches of water. A single cell decontamination unit must be attached to the containment.

The floor(s) in the containment area are to have a minimum of two layers of six mil poly. Remaining walls are to have a minimum of two layers of six mil poly.

The asbestos containing material is to be wetted before and during removal. The drywall compound is to be removed intact to the extent possible. The Contractor is responsible for cleaning up the ACM debris in the removal area by wet methods, HEPA-filtered vacuums, or a combination of each. The asbestos containing material must immediately be placed in six mil poly bags with the appropriate OSHA, DOT, and waste generator labels affixed. All disposal containers must be cleaned prior to

removal from the contained area. If the contractor is using barrels, barrels must be lined with six mil poly and properly sealed and labeled. The asbestos containing material is to be disposed of at an approved landfill.

#### D. Duct Wrap Removal

1. Remove the asbestos containing duct wrap on the HVAC duct intact, where possible. If the asbestos containing duct wrap cannot be removed intact, remove the duct wrap by attaching a glovebag to the duct where the wrap is to be removed. All asbestos removal work is to be done as per this specification. The Contractor is to remove all movable objects in the containment area. All objects which must remain in the containment areas are to be sealed with a minimum of one layer of six mil poly. The containments must have a minimum of four air changes per hour and a differential pressure of 0.02 column inches of water. A full and functional three chamber decontamination unit must be attached to the containment.

The floor(s) in the containment area are to have a minimum of two layers of six mil poly.

The asbestos containing material is to be wetted before and during removal. The duct where the wrap is in place is to be double wrapped in six mil poly. Then, if possible, the duct is to be cut in areas where there is no duct wrap. If the duct wrap is unable to be removed intact, the glovebag techniques described in this specification are to be used. The Contractor is responsible for cleaning up the ACM debris in the removal area by wet methods, HEPA-filtered vacuums, or a combination of each. The asbestos containing material must immediately be placed in six mil poly bags with the appropriate OSHA, DOT, and waste generator labels affixed. All disposal containers must be cleaned prior to removal from the contained area. If the contractor is using barrels, barrels must be lined with six mil poly and properly sealed and labeled. The asbestos containing material is to be disposed of at an approved landfill.

#### E. Floor Tile Adhesive/Mastic Removal

1. Remove the asbestos containing floor tile adhesive/mastic. All asbestos removal is to be done as per this specification. The Contractor is to remove all movable objects in the containment area. All objects which must remain in the containment areas are to be sealed with a minimum of one layer of six mil poly. The containments must have a minimum of four air changes per hour and a differential pressure of 0.02 column inches of water. A single cell decontamination unit must be attached to the containment.

The asbestos containing material is to be wetted before and during removal. The floor tile adhesive/mastic is to be removed intact to the extent possible. If the asbestos containing floor tile and adhesive/mastic are located beneath carpet, all critical barriers and negative air enclosures must be operational prior to carpet removal. The Contractor is responsible for cleaning up the ACM debris in the removal area by wet methods, HEPA-filtered vacuums, or a combination of each. The asbestos containing material must immediately be placed in six mil poly bags with the appropriate OSHA, DOT, and waste generator labels affixed. All disposal containers must be cleaned prior to removal from the contained area. If the contractor is using barrels, barrels must be lined with six mil poly and properly sealed and labeled. The asbestos containing material is to be disposed of at an approved landfill.

#### F. Floor Tile Removal

1. Remove the asbestos containing floor tile. All asbestos removal Work is to be done as per this specification. The Contractor is to remove all movable objects in the containment area. All objects which must remain in the containment areas are to be sealed with a minimum of one layer of six mil poly. The containments must have a minimum of four air changes per hour and a differential pressure of 0.02 column inches of water. A single cell decontamination unit must be attached to the containment.

The asbestos containing material is to be wetted before and during removal. The floor tile is to be removed in an intact manner if possible. If the asbestos containing floor tile is located beneath carpet, all critical barriers and negative air enclosures must be operational prior to carpet removal. The Contractor is responsible for cleaning up the ACM debris in the removal area by wet methods, HEPA-filtered vacuums, or a combination of each. The asbestos containing material must immediately be placed in six mil poly bags with the appropriate OSHA, DOT, and waste generator labels affixed. All disposal containers must be cleaned prior to removal from the contained area. If the contractor is using barrels, barrels must be lined with six mil poly and properly sealed and labeled. The asbestos containing material is to be disposed of at an approved landfill.

#### G. Mudded Fitting (Joint Mud) Removal

1. Remove the asbestos containing mudded fittings. All asbestos removal Work is to be done using the glovebag removal method as per this specification. The Contractor is to remove all movable objects in the containment area. All objects which must remain in the containment areas are to be sealed with a minimum of one layer of six mil poly.

Before beginning work, each glovebag shall be inspected for breaches and smoke-tested for leaks, and any leaks sealed. The asbestos containing mudded fittings are to be removed intact to the extent possible. The asbestos mudded fittings are to be well wetted with amended water before disturbance and removal. During removal the asbestos containing mudded fittings should continue to be wetted with amended water to avoid visible emissions. The asbestos containing material must immediately be placed in six mil poly bags with the appropriate OSHA, DOT, and waste generator labels affixed. All disposal containers must be cleaned prior to removal from the contained area. If the contractor is using barrels, barrels must be lined with six mil poly and properly sealed and labeled. The asbestos containing material is to be disposed of at an approved landfill.

#### H. Pipe Insulation Removal

1. Remove the asbestos containing pipe insulation. All asbestos removal Work is to be done using the glovebag removal method as per this specification. The Contractor is to remove all movable objects in the containment area. All objects which must remain in the containment areas are to be sealed with a minimum of one layer of six mil poly.

Before beginning work, each glovebag shall be inspected for breaches and smoke-tested for leaks, and any leaks sealed. The asbestos containing pipe insulation is to be removed intact to the extent possible. The asbestos pipe insulation is to be well wetted with amended water before disturbance and removal. During removal the asbestos containing mudded fittings should continue to be wetted with amended water to avoid visible emissions. The asbestos containing material must immediately

be placed in six mil poly bags with the appropriate OSHA, DOT, and waste generator labels affixed. All disposal containers must be cleaned prior to removal from the contained area. If the contractor is using barrels, barrels must be lined with six mil poly and properly sealed and labeled. The asbestos containing material is to be disposed of at an approved landfill.

#### I. Tar Pipe Wrap Removal

1. Remove the asbestos containing tar pipe wrap. All asbestos removal is to be done as per this specification. The Contractor is to remove all movable objects in the containment area. All objects which must remain in the containment areas are to be sealed with a minimum of one layer of six mil poly. The containments must have a minimum of four air changes per hour and a differential pressure of 0.02 column inches of water. A single cell decontamination unit must be attached to the containment.

The floor(s) in the containment area are to have a minimum of two layers of six mil poly.

The asbestos containing material is to be wetted before and during removal. The tar pipe wrap is to be removed intact to the extent possible. The Contractor is responsible for cleaning up the ACM debris in the removal area by wet methods, HEPA-filtered vacuums, or a combination of each. The asbestos containing material must immediately be placed in six mil poly bags with the appropriate OSHA, DOT, and waste generator labels affixed. All disposal containers must be cleaned prior to removal from the contained area. If the contractor is using barrels, barrels must be lined with six mil poly and properly sealed and labeled. The asbestos containing material is to be disposed of at an approved landfill.

#### J. Window Glazing Removal

1. Remove the asbestos containing window glazing. All asbestos removal Work is to be done as per this specification. The Contractor is to remove all movable objects in the containment area. All objects which must remain in the containment areas are to be sealed with a minimum of one layer of six mil poly. The containments must have a minimum of four air changes per hour and a differential pressure of 0.02 column inches of water. A single cell decontamination unit must be attached to the containment.

The asbestos containing material is to be wetted before and during removal. The window/door glazing is to be removed intact to the extent possible and may include removal of entire windows. The Contractor is responsible for cleaning up the ACM debris in the removal area by wet methods, HEPA-filtered vacuums, or a combination of each. The asbestos containing material must immediately be placed in six mil poly bags with the appropriate OSHA, DOT, and waste generator labels affixed. All disposal containers must be cleaned prior to removal. If the contractor is using barrels, barrels must be lined with six mil poly and properly sealed and labeled. The asbestos containing material is to be disposed of at an approved landfill.

If the Contractor removes windows as part of the caulk removal, they are required to re-secure the window openings with ¼" plywood.

## 1.0 EXECUTIVE SUMMARY

Impact7G, Inc. (Impact7G), completed an Asbestos Containing Materials (ACM) Inspection on April 24 and May 2, 2023 of the existing building located at 20 E Main Street Marshalltown, Iowa. The purpose of this ACM Inspection is to document the presence of asbestos containing materials and assist the City of Marshalltown in facilitating renovation and/or demolition activities of the building.

Asbestos was detected in twenty-six (26) of the ninety-eight (98) samples collected from various building components within the Property's interior and exterior. See Table 1 for additional information. ACMs include:

- Boiler Insulation(s)
- Pipe Insulation(s)
- Tar Pipe Wrap(s)
- Window Glaze(s)
- 9" x 9" Floor Tile
- 12" Floor Tile Mastic
- Brick Caulk
- Joint Mud(s)
- Duct Wrap(s)
- Drywall Compound(s)
- 9" Floor Tile Adhesive
- 12" x 12" Floor Tile(s)
- Window Frame Caulk

All building materials similar in appearance, color, and/or texture to those determined to contain asbestos must be assumed to contain asbestos throughout this building.

Based on these results, the Property requires further action prior to any renovation or demolition activities.

## 2.0 INTRODUCTION

### A. Property Information

Location:

Commercial Building  
20 E Main Street  
Marshalltown, Iowa 50158

Contact Person:

Ms. Michelle Spohnheimer  
City of Marshalltown  
24 N Center Street  
Marshalltown, Iowa 50158

### B. Personnel

|                               |                       |          |

| Inspector: Bradley Davison    | State of Iowa License | 23-96181 |
| Inspector: Jacob Schnur       | State of Iowa License | 23-94281 |

### C. Sampling Plan

According to the Client, the scope of this ACM Inspection includes the commercial building with the exception of the roofs.

This ACM Inspection is in accordance with OSHA Regulation 1926.1101. All samples collected in the field were sent to EMSL, an NVLAP certified laboratory, for analysis. The samples were analyzed via the polarized light microscopy (PLM) method for asbestos content. If requested by Client, samples were further analyzed via the transmission electron microscopy (TEM) method or PLM 400 Point Count analysis method.

### D. Regulation Review

The U.S. EPA qualifies asbestos containing materials (ACM) as materials with an asbestos content greater than 1%. According to Iowa OSHA, ACM is any material found to contain asbestos, regardless of its concentration, and shall be regulated as hazardous waste. The following definitions are taken from Section 61.141 of Subpart M, Part 61 of Title 40: Protection of Environment of the Code of Federal Regulations (CFR).

- “Category I nonfriable asbestos-containing material (ACM)” is defined as asbestos-containing packings, gaskets, resilient floor covering, and asphalt roofing products containing more than 1% asbestos as determined using the method specified in appendix E, subpart E, 40 CFR part 763, section 1, Polarized Light Microscopy (PLM).
- “Category II nonfriable ACM” is defined as any material, excluding Category I nonfriable ACM, containing more than 1% asbestos as determined using the methods specified in appendix E, subpart E, 40 CFR part 763, section 1, PLM that, when dry, **cannot** be crumbled, pulverized, or reduced to powder by hand pressure.
- “Friable asbestos material” is defined as any material containing more than 1% asbestos as determined using the methods specified in appendix E, subpart E, 40 CFR part 763, section 1, PLM that when dry, **can** be crumbled, pulverized, or

reduced to powder by hand pressure. If the asbestos content is less than 10% as determined by a method other than point counting by PLM, verify the asbestos content by point counting using PLM.

### 3.0 PROPERTY DESCRIPTION

The Property consists of a 3,400 square foot vacant commercial building. The original building on the Property is a two-story brick structure with a basement constructed circa 1890. A one-story addition was constructed circa 1964.

### 4.0 INSPECTION LIMITATIONS

An Inspection limitation, for the purpose of this report, is any action or task that is limited from the original scope work. The overall reason for any limitation is the protection of Impact7G personnel. Examples of limitations can range from a lack of accessibility to an area of the Property, unsafe work areas, collecting additional samples, etc.

- **The roof was not sampled at the request of the Client for integrity reasons.**

### 5.0 INSPECTION ACTIVITIES

Iowa certified asbestos inspectors from Impact7G collected 93 samples on April 24, 2023, and an additional five samples on May 1, 2023. The samples were collected from various accessible building components located throughout the commercial building. Upon completion of bulk sampling activities, samples were sent to EMSL, an NVLAP certified laboratory, for analysis.

Materials that are “suspected” to contain asbestos are divided into the following three categories:

1. **Surfacing materials** are materials that are sprayed or troweled on for acoustical, decorative, or fireproofing purposes. Examples are textured ceilings or drywall, exterior stucco and structural steel fireproofing;
2. **Thermal System Insulation (TSI)** is insulation used to inhibit heat transfer from pipes, boilers, tanks, ducts, and various other components of hot and cold-water systems and HVAC systems. Examples are hard cementitious “mud” type insulation on pipes, boilers and flues; and,
3. **Miscellaneous** materials are mostly non-friable products and materials such as floor tile, drywall, ceiling tile and roofing felt.

The following tables show samples positively identified by the laboratory to be asbestos containing materials (ACM) and samples that were analyzed as non-ACM. The complete analytical results can be found in Appendix B.

**Table 1 – Asbestos Containing Materials Sample List**

| Sample #   | Material Substance     | Material Type (Surf/TSI/Misc) | Friable (Y or N) | Color | Floor     | Location                                   | Asbestos Content | Est. Quantity     |
|------------|------------------------|-------------------------------|------------------|-------|-----------|--------------------------------------------|------------------|-------------------|
| 20E-02 ABC | Boiler Insulation      | TSI                           | Y                | Gray  | B         | Room 19 on Boiler                          | 75% Chrysotile   | 110 SF            |
| 20E-03 ABC | Joint Mud              | TSI                           | Y                | White | B         | Throughout Basement                        | 30% Chrysotile   | 40 EA             |
| 20E-04 ABC | Pipe Insulation        | TSI                           | Y                | Gray  | B         | Throughout Basement                        | 65% Chrysotile   | 90 LF             |
| 20E-05 ABC | Duct Wrap              | TSI                           | Y                | White | B         | On Old Duct Locations                      | 70% Chrysotile   | 40 SF             |
| 20E-10 ABC | Tar Pipe Wrap          | TSI                           | N                | Black | B         | North Side Main Room                       | 2% Chrysotile    | 15 LF             |
| 20E-12     | Drywall Compound       | Misc                          | N                | White | B         | Middle Basement Stairs                     | <1% Chrysotile   | 400 SF            |
| 20E-35     | Window Glaze           | Misc                          | N                | Tan   | 1         | Room 2 North Window                        | <1% Chrysotile   | 8 LF              |

Nineteen (19) bulk material samples were analyzed greater than 1% asbestos. Seven (7) of the remaining building material samples were detected with a concentration of <1% asbestos. ACMs include boiler insulation(s), joint mud(s), pipe insulation(s), duct wrap(s), tar pipe wrap(s), drywall compound(s), window glaze(s), 9" floor tile adhesive, 9" x 9" floor tile, 12" x 12" floor tile(s), 12" floor tile mastic,

window frame caulk, and brick caulk. If during demolition or renovation activities additional areas of identified ACM are discovered, they should be abated accordingly. Laboratory analytical reports are provided in Appendix B.

Asbestos Containing Material (ACM) is defined as any material containing greater than one percent ( $>1\%$ ) asbestos. Building materials containing equal to one percent ( $1\%$ ) or less than one percent ( $<1\%$ ) asbestos by **point count analysis** are not classified as Regulated Asbestos Containing Material (RACM) by the EPA. Although an asbestos abatement contractor is not required to remove materials containing  $1\%$  or less asbestos, these materials must be removed wet and promptly contained and disposed of in leak-tight containers. Materials containing  $1\%$  or less asbestos are not required to be disposed of at an approved landfill as asbestos waste material. Employers of those engaging in the disturbance of  $1\%$  or less asbestos are required to provide their workers with Asbestos Awareness training of at least two hours prior to disturbance of said materials. Further, those removing materials containing  $1\%$  or less asbestos must maintain documentation proving that breathing zone exposures do not exceed either OSHA's permissible exposure limit or short-term excursion limit.

**It is important to note that these are estimated quantities; therefore, the abatement contractors and the client representative should discern between the estimated quantity above and future exploration of the property at the pre-bid walk-through to determine the final quantity during abatement procedures.**

**Table 2 – Non-Asbestos Containing Material Sample List**

## 6.0 CONCLUSIONS / RECOMMENDATIONS

The following conclusions and recommendations are summarized as follows:

- Asbestos was detected in twenty-six (26) of the bulk material samples collected from the building located at 20 E Main Street, Marshalltown, Iowa 50158. ACMs include boiler insulation(s), joint mud(s), pipe insulation(s), duct wrap(s), tar pipe wrap(s), drywall compound(s), window glaze(s), 9" floor tile adhesive, 9" x 9" floor tile, 12" x 12" floor tile(s), 12" floor tile mastic, window frame caulk, and brick caulk. Based on the results of the data collected during the assessment, the building requires further action prior to demolition or renovation.

Impact7G recommends the abatement of all ACM containing components located within the inspection area if those building materials are to be disturbed during any future renovation/demolition activities. All abatement work shall be completed in accordance with local, state, and federal regulations. A visual inspection is recommended upon completion of abatement work to document that all ACMs within the scope of abatement have been removed.

## 7.0 CONDITIONS & LIMITATIONS

The Iowa Department of Natural Resources' (IDNR) Air Quality Bureau and Occupational Safety and Health Bureau (OSHA) of the Iowa Division of Labor Services require notification of any renovation/demolition activities in non-residential projects if the combined regulated ACM meets or exceeds any of the following thresholds: 160 square feet of surfacing ACM, 260 linear feet of TSI, or 35 cubic feet of ACM debris.

Impact7G has performed the tasks contained within this report in a thorough and professional manner consistent with commonly accepted standard industry practices. The results, findings, conclusions and recommendations expressed in this report are based on conditions observed during our survey of the property. Impact7G cannot guarantee, and does not warrant, that this report has identified all adverse environmental factors and/or conditions affecting the subject property. This report is not a bidding document or project specification as it does not contain the necessary components. Impact7G cannot warrant the work of any third party that may have aided in the completion of this report. This report has been prepared on behalf of and exclusively for use by the City of Marshalltown for specific application to their project as discussed. Contractors, consultants or other third parties reviewing this report must draw their own conclusions regarding data contained within the report, further investigation or required remediation.

## **APPENDIX A**

### **Qualifications**

# Certificate of Completion

**BRADLEY DAVISON**

**DOB:** 01-30-1987

**Issued:** 03-01-2023

This person is licensed to perform asbestos work in the State of Iowa. ID card is intended for official use only and must be present on jobsite.

**Impact7G, Inc.**

certifies that

**Bradley Davison**

| License Type    | Number  | Expires    |

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method") but augmented with procedures outlined in the 1993 ("final") version of the method. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. Non-friable organically bound materials present a problem matrix and therefore EMSL recommends gravimetric reduction prior to analysis. Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are reported as a single sample. Estimation of uncertainty is available on request.

Samples analyzed by EMSL Analytical, Inc. Indianapolis, IN NVLAP Lab Code 200188-0, AZ0939, CA 2575, CO AL-15132, TX 300262, A2LA Accredited - Certificate #2845.25

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method") but augmented with procedures outlined in the 1993 ("final") version of the method. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. Non-friable organically bound materials present a problem matrix and therefore EMSL recommends gravimetric reduction prior to analysis. Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are reported as a single sample. Estimation of uncertainty is available on request.

Samples analyzed by EMSL Analytical, Inc. Indianapolis, IN NVLAP Lab Code 200188-0, AZ0939, CA 2575, CO AL-15132, TX 300262, A2LA Accredited - Certificate #2845.25

Report amended: 05/05/2023 10:41:11 Replaces initial report from: 04/28/2023 12:30:59 Reason Code: Client-Samples Added

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method") but augmented with procedures outlined in the 1993 ("final") version of the method. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. Non-friable organically bound materials present a problem matrix and therefore EMSL recommends gravimetric reduction prior to analysis. Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are reported as a single sample. Estimation of uncertainty is available on request.

EMSL maintains liability limited to cost of analysis. Interpretation and use of test results are the responsibility of the client. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. The report reflects the samples as received. Results are generated from the field sampling data (sampling volumes and areas, locations, etc.) provided by the client on the Chain of Custody. Samples are within quality control criteria and met method specifications unless otherwise noted. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method") but augmented with procedures outlined in the 1993 ("final") version of the method. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. Non-friable organically bound materials present a problem matrix and therefore EMSL recommends gravimetric reduction prior to analysis. Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are reported as a single sample. Estimation of uncertainty is available on request.

Samples analyzed by EMSL Analytical, Inc. Indianapolis, IN NVLAP Lab Code 200188-0, AZ0939, CA 2575, CO AL-15132, TX 300262, A2LA Accredited - Certificate #2845.25

Report amended: 05/05/2023 10:41:11 Replaces initial report from: 04/28/2023 12:30:59 Reason Code: Client-Samples Added

City of Marshalltown  
Hector Hernandez-Morales  
City Planner  
36 N Center Street  
Marshalltown, Iowa 50158

Dear Mr. Hernandez-Morales,

Impact7G completed an Asbestos Containing Materials (ACM) Inspection report on May 9, 2023 for the existing commercial building located at 20 E Main Street, Marshalltown, Iowa, 50158 (Property). Impact7G has compiled this ACM cost estimate for the removal and disposal of ACM identified within the Property's interior and exterior. Multiple factors can influence the abatement costs. These include but are not limited to: time of the year the project is bid/completed, timeframe allowed for completion, prequalifications, and insurance/bonding requirements.

| Sample #   | Material Substance     | Color | Floor     | Location                                   | Asbestos Content | Est. Quantity     | Est. Abatement Cost |
|------------|------------------------|-------|-----------|--------------------------------------------|------------------|-------------------|---------------------|
| 20E-02 ABC | Boiler Insulation      | Gray  | B         | Room 19 on Boiler                          | 75% Chrysotile   | 110 SF            | \$2,200.00          |
| 20E-03 ABC | Joint Mud              | White | B         | Throughout Basement                        | 30% Chrysotile   | 40 EA             | \$4,000.00          |
| 20E-04 ABC | Pipe Insulation        | Gray  | B         | Throughout Basement                        | 65% Chrysotile   | 90 LF             | \$1,800.00          |
| 20E-05 ABC | Duct Wrap              | White | B         | On Old Duct Locations                      | 70% Chrysotile   | 40 SF             | \$300.00            |
| 20E-10 ABC | Tar Pipe Wrap          | Black | B         | North Side Main Room                       | 2% Chrysotile    | 15 LF             | \$300.00            |
| 20E-12     | Drywall Compound       | White | B         | Middle Basement Stairs                     | <1% Chrysotile   | 400 SF            | \$3,600.00          |
| 20E-35     | Window Glaze           | Tan   | 1         | Room 2 North Window                        | <1% Chrysotile   | 8 LF              | \$75.00             |
| 20E-36     | Window Glaze           | Gray  | 1         | Room 2 North Window                        | <1% Chrysotile   | 8 LF              | \$75.00             |
| 20E-40     | 9" Floor Tile Adhesive | Brown | 1         | Room 4 Near North Entrance                 | <1% Chrysotile   | 25 SF             | \$125.00            |
| 20E-46     | 9" x 9" Floor Tile     | Tan   | Mezzanine | Room 8                                     | 3% Chrysotile    | 300 SF            | \$1,500.00          |
| 20E-51     | 12" x 12" Floor Tile   | Tan   | 2         | Room 15 & Throughout 2 <sup>nd</sup> Floor | 3% Chrysotile    | 2,400 SF          | \$10,200.00         |
| 20E-57     | 12" x 12" Floor Tile   | Gray  | 2         | Randomly In Room 14                        | 3% Chrysotile    | Included in Above | Included in Above   |
| 20E-58     | 12" Floor Tile Mastic  | Black | 2         | Randomly in Room 14                        | <1% Chrysotile   | 20 SF             | \$100.00            |
| 20E-60     | Drywall Compound       | White | 2         | 2 <sup>nd</sup> Floor Walls                | <1% Chrysotile   | 1,500 SF          | \$13,500.00         |
| 20E-63     | Window Frame Caulk     | White | 1         | Brick Window Union                         | <1% Chrysotile   | 20 LF             | \$150.00            |
| 20E-65     | Brick Caulk            | Gray  | 1         | South Entrance on Top of Brick Façade      | 2% Chrysotile    | 2 LF              | \$20.00             |
| Total:     |                        |       |           |                                            |                  |                   | \$37,945.00         |

## **APPENDIX D – Iowa DNR 10-Day Notification Form**

# ASBESTOS NOTIFICATION OF DEMOLITION AND RENOVATION

| DNR USE ONLY                                                                                                  |           |           |  |
|---------------------------------------------------------------------------------------------------------------|-----------|-----------|--|
| CON 10-15                                                                                                     | County #: |           |  |
| Date:                                                                                                         |           | Initials: |  |
| <input type="checkbox"/> Check/Money Order <input type="checkbox"/> Credit Card <input type="checkbox"/> Cash |           |           |  |

This notice must be postmarked at least ten (10) working days before beginning the activity. All applicable information must be included.

**Notification Fee:** Effective beginning January 15, 2016, each required **Original** or **Annual** notification must be accompanied by the fee required by 567 IAC 30.3(1).

**567 IAC 30.3(1) Payment of fees established.** Beginning on January 15, 2016, the owner or operator of a site subject to the national emission standard for hazardous air pollutants (NESHAP) for asbestos notifications adopted by reference in paragraph 23.1(3)"a," shall submit a fee with each required original or each annual notification for each demolition or renovation, including abatement.

Fees are **not** required for the following:

- Notifications when the total amount of asbestos to be removed or disturbed is less than 260 linear feet, less than 160 square feet, and less than 35 cubic feet of facility components and is below the reporting thresholds as defined in 40 CFR 61.145 as amended on January 16, 1991;
- Notifications of training fires as required in 567—paragraph 23.2(3)"g";
- Controlled burning of demolished buildings as required in 567—paragraph 23.2(3)"j";
- Revised, canceled, and courtesy notifications. A revision to a previously submitted courtesy notification due to applicability of the notification requirements in 567—paragraph 23.1(3)"a" is considered an original notification and is subject to the fee requirements of subrule 30.3(1).

Each required fee is \$100 payable to "Iowa Department of Natural Resources" in the form of a check, money order, credit card or cash. Please do not send cash in the mail.

Owner or Operator Name Paying Fee: \_\_\_\_\_ Phone #: \_\_\_\_\_

☐ \$100 Fee Enclosed ☐ Contact for Credit Card Payment or State Agency

## 1. Type of Notification

☐ Original (Fee) ☐ Revised ☐ Cancelled ☐ Courtesy ☐ Annual (Fee)

## 2. Type of Operation

(Each Type of Operation requiring an original notification must be accompanied by a separate \$100 fee.)

☐ Abatement ☐ Demolition  
☐ Renovation ☐ Ordered Demolition  
☐ Emergency Renovation

## 3. Is Asbestos Present?

☐ Yes ☐ No – Abatement has already occurred  
☐ No – Asbestos found is under NESHAP limits

4. Scheduled Dates asbestos removal (MM/DD/YY) Start: \_\_\_\_\_ Stop: \_\_\_\_\_

5. Scheduled Dates Demo/Renovation (MM/DD/YY) Start: \_\_\_\_\_ Stop: \_\_\_\_\_

## 6. Facility Description (Include building name, number and floor or room number.)

Building Name: \_\_\_\_\_

Address: \_\_\_\_\_ County: \_\_\_\_\_

City: \_\_\_\_\_ State: \_\_\_\_\_ Zip: \_\_\_\_\_

Site Location (floor or room number(s)): \_\_\_\_\_

Building Size: \_\_\_\_\_ No of floors: \_\_\_\_\_ Year Constructed: \_\_\_\_\_

Present Use: \_\_\_\_\_ Prior Use: \_\_\_\_\_

## 7. Facility Information (Identify owner, and operator)

Owner Name: \_\_\_\_\_

Address: \_\_\_\_\_

City: \_\_\_\_\_ State: \_\_\_\_\_ Zip: \_\_\_\_\_

**INSTRUCTIONS**  
**ASBESTOS NOTIFICATION OF DEMOLITION AND RENOVATION FORM**

**GENERAL INFORMATION**

The Asbestos NESHAP, 40 CFR 61.145 and 567 IAC 23.1(3), requires written notification of demolition or renovation activities in facilities. In most cases, a facility includes all types of structures except single family homes and apartment buildings having no more than four units. The enclosed form must be used to fulfill this requirement. Only complete notification forms will be accepted.

The notification should be typewritten or neatly printed and postmarked or delivered no later than ten days prior to the beginning of either the asbestos removal activity (Section IV) or demolition activity (in Section V) whichever is applicable.

**INSTRUCTIONS**

1. **Type of Notification:** Check "Original" if the notification is a first time or original notification, "Revised" if the notification is a revision of a prior notification, or "Canceled" if the activity has been canceled. Check "Courtesy" if you would like to make DNR aware of a non-regulated project. Check "Annual" for projects in accordance with 40 CFR Part 61, Subpart M 61.145(a)(4)(iii).
2. **Type of Operation:** Check as appropriate for facility abatement, demolition, renovation, ordered demolitions, or emergency renovations. A notification for renovation is required only if asbestos was removed or still present but not being disturbed. However, if asbestos has been or will be removed, then a separate abatement notification form should be submitted by the appropriate part.
3. **Is Asbestos Present?** Answer "Yes," "No – Abatement has already occurred," or "No – Asbestos found is under NESHAP limits."
4. **Scheduled Dates of Asbestos Removal (MM-DD-YY):** Enter scheduled dates (month/day/year) for asbestos removal work. Asbestos removal work includes any activity, including site preparation, which may break up, dislodge or disturb asbestos material.
5. **Scheduled Dates of Demolition/Renovation (MM-DD-YY):** Enter scheduled dates (month/day/year) for beginning and ending the planned demolition or renovation project.
6. **Facility Description:** Provide the following information on the areas being renovated or demolished:

|                                      |                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Building Address :                   | Physical location of site                                                                                                                                                                                                                                                                                                                                                       |
| Site Location (floor or room number) | Enter specific location                                                                                                                                                                                                                                                                                                                                                         |
| Building Size:                       | The building size in square feet.                                                                                                                                                                                                                                                                                                                                               |
| No. of Floors:                       | Enter the number of floors including basement, if applicable.                                                                                                                                                                                                                                                                                                                   |
| Year Constructed:                    | Enter year the facility was originally constructed.                                                                                                                                                                                                                                                                                                                             |
| Present Use/Prior Use:               | Describe the primary use of the facility or enter the following codes: AC – Apartment Complex, B – Boat/Ship, BR – Bridge, CH – Church, C – Commercial, F – Fire Damaged, G – Government, H – Hospital, I – Industrial, M – Miscellaneous, MG – Manufacturing, N – Nursing Home, O – Office, P – Public Building, R – Residence, S - School, U – University/College, V - Vacant |

7. **Facility Information:** Enter the names, addresses, contact persons and telephone numbers of the following:  
**Owner:** Legal owner of the site at which asbestos is being removed or demolition planned.  
**Operator:** General contractor, or any other person who leases, operates, controls or supervises the site.  
  
If known, the name of the site supervisor should be entered as the contact person for the notification. If additional parties share responsibility for the site, demolition activity, renovation or ACM removal, include complete information (including name, address, contact person and telephone number) on additional sheets submitted with the form.
8. **Asbestos Abatement Contractor:** If notification is being submitted for asbestos removal enter the name of contractor hired to remove asbestos, contractor permit number, address, contact, and phone number.
9. **Demolition Contractor:** If notification is being submitted for demolition or renovation enter the name of contractor hired, permit number, address, contact, and phone number.
10. **Asbestos Inspector:** Enter the individual who conducted the asbestos inspection prior to demolition/renovation, the inspector license number, date inspected and telephone number.
11. **a) Approximate Amount of Asbestos Including:** (1) Regulated ACM to be removed (including nonfriable ACM to be sanded, ground or abraded); and (2) Category I and Category II nonfriable asbestos containing material not to be removed. For both renovations and demolitions, enter the amount of RACM to be removed by entering a number in the appropriate box. If applicable, enter the amount of nonfriable ACM not to be removed during a demolition or renovation.

Category I nonfriable material includes packing, gaskets, resilient floor covering and asphalt roofing materials. Category II nonfriable material includes any material, excluding Category I materials, that when dry, cannot be crumbled, pulverized or reduced to powder by hand pressure, or mechanical forces expected to operate on the material during the demolition or renovation activity. All Category II materials must be removed prior to demolition.

Complete the volume from facility component(s) if asbestos-containing materials have been removed from facility components and the volume is known.

**b) Quantify in Sq. Ft. the Total Surface Area of RACM to be removed from 11a.** Check the type of RACM to be removed and enter the square feet for each material. (Total 11b square feet should equal 11a square feet of RACM to be removed.) **Facility Components and Pipes are not included in 11b.**

- 12. Asbestos Testing Procedure:** Check the appropriate box for the procedure that was used to determine asbestos content.
- 13. Description of Work Practices and Engineering Controls to Prevent Asbestos Emissions:** Check the appropriate box(s) for work practices that will be employed to prevent asbestos emissions.
- 14. Description of Planned Demolition or Renovation Work:** Check the appropriate box(s) that describe the renovation/ demolition technique(s) to be used.
- 15. Waste Transporter(s):** Enter the name(s), addresses(s), contact person(s) and telephone number(s) of the person(s) or company(ies) responsible for transporting ACM from the removal site to the waste disposal site. If the removal contractor or owner is the waste transporter, state "same as owner" or "same as removal contractor."
- 16. Waste Disposal Site:** Identify the waste disposal site, including the complete name, location, and telephone number of the facility. If ACM is to be disposed of at more than one site, provide complete information on an additional sheet submitted with the form.
- 17. If Demolition Ordered by a Government Agency, Please Identify the Agency below:** Provide the name of the responsible official, title and agency, authority under which the order was issued and the date of the order. A copy of the order from the government agency must be attached to this form.
- 18. Emergency Renovation Information:** Provide the date and time of the emergency, a description of the event and a description of unsafe conditions, equipment damage or financial burden resulting from the event. The information should be detailed enough to evaluate whether a renovation falls within the emergency exemption.
- 19. Description of Procedures to be Followed in the Event that Unexpected Asbestos Fiber Release:** Provide adequate information to demonstrate that appropriate actions have been considered and can be implemented to control asbestos emissions adequately, including at a minimum, conformance with applicable work practice standards. Attach an additional sheet of paper if needed and submit with this form.
- 20. Certification:** This is required if asbestos is present, i.e. abatements and ordered demolitions. Include signature, date, printed name, title, and company to certify that training provisions required by the asbestos NESHAP regulation will be followed.
- 21. Information provided in notification is true and correct:** This is required for all notifications. Include signature, date, printed name, title, and company to certify the information provided is true and correct to the best of your knowledge.

United States Department of the Interior

National Register of Historic Places  
Registration Form

OCT 29 2001

1463

The form is for use in nominating or requesting determinations for individual properties and districts. See instructions in How to Complete the National Register of Historic Places Registration Form. For functions, architectural classification, materials, and other information, see the National Register of Historic Places Registration Form. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

**Name of Property**

historic name Marshalltown Downtown Historic District

other names/site number \_\_\_\_\_

**2. Location**

street & number 200 block E. Main to 100 Block W. Main, side streets N/A ☐ not for publication

city or town Marshalltown N/A ☐ vicinity

state Iowa code IA county Marshall code 127 zip code 50158

**3. State/Federal Agency Certification**

As the designated authority under the National Historic Preservation Act, as amended, I hereby certify that this ☒ nomination ☐ request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60. In my opinion, the property ☒ meets ☐ does not meet the National Register criteria. I recommend that this property be considered significant ☐ nationally ☐ statewide ☒ locally. (☐ see continuation sheet for additional comments).

**8. Statement of Significance****Applicable National Register Criteria**

(Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing.)

- ☒ **A** Property is associated with events that have made a significant contribution to the broad patterns of our history.
- ☐ **B** Property is associated with the lives of persons significant in our past.
- ☒ **C** Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- ☐ **D** Property has yielded, or is likely to yield, information important in prehistory or history.

**Criteria Considerations**

(Mark "x" in all the boxes that apply.)

Property is:

- ☐ **A** owned by a religious institution or used for religious purposes.
- ☐ **B** removed from its original location.
- ☐ **C** a birthplace or grave.

### Narrative Description:

The Marshalltown Downtown Historic District comprises the core blocks of the central business district extending for four and a half blocks along East Main Street and West Main Street, partial block sections of State and Church Street which parallel Main, and short sections of intersecting streets (north and south Center Street, 1<sup>st</sup> Avenue, 2<sup>nd</sup> Avenue, and 1<sup>st</sup> Street. The focal point of the district is the Marshall County Courthouse and surrounding square. All of the streets currently carry two-way traffic with parallel or angle parking along both sides. S.R. 14 follows 3<sup>rd</sup> Avenue a half-block east of the district carrying four lanes of traffic on a north/south route through the city. The original route of the Lincoln Highway (U.S. 30) entered the downtown along East Main Street and turned south along 9th Street and later along Center Street. The route has been moved several times and currently is located several miles south of the central business district.

All of the Marshalltown Downtown Historic District is contained within the original town plat for Marshalltown laid out and recorded on August 15, 1853 as the village of Marshall. Confusion with another town of the same name in Henry County prompted the village to be renamed in 1862 as "Marshalltown" and formally incorporated the following year. The original town plat of Marshall contained city blocks measuring 376½ feet by 376½ feet. Each block contained twelve lots measuring 60 feet by 180' with intersecting east-west and north-south alleys 16½ feet wide. The two principal streets in the District – Main and Center – have 80 feet widths while the intersecting streets have 66 feet widths. The names of most of the downtown streets changed sometime between 1871 and 1878. Main Street was given east and west designations beginning at Center Street. Intersecting numbered streets were established to the west of Center Street and numbered avenues to the east with Main Street providing the dividing line between north and south numbers. State Street was the

**NATIONAL REGISTER OF HISTORIC PLACES**

Name of Property

Marshall County, IA  
County and State

new named given to the former "River Street" one block north of Main Street and Church Street was the new name given to the former "South Main Street" one block south of present day Main Street. In 2001 all of the streets in the District are paved in asphalt.

The only changes made in the downtown plat since 1870s have been the vacations of scattered alley sections. Examples include the half-block section of the north-south alley in Block 10 north of East Main Street that was vacated and sold by the City of Marshalltown as Lot 13 in 1878 to allow construction of an opera house, and the half block section of north-south alley in Block 8 north of West Main Street that was vacated in 1947 to allow construction of a new building for the local J.C. Penney Department Store two years later.

The terrain of the Marshalltown Downtown Historic District is nearly flat with only a slight decline between Main Street and Church Street. Nearly all buildings are sited level with the street with a few exceptions where raised basements require one or more entrance steps. When originally developed in the mid-19<sup>th</sup> century, according to historic accounts, the area consisted of unbroken prairie. Founder Henry Anson established his "preemption cabin" mid-way between the Iowa River to the north and Linn Creek to the south at a location west and south of the present intersection of Main and First Streets (112 West Main Street).

Today, Main Street is a two-way street lined by parallel parking spaces and a series of deciduous trees planted about 20 years ago. Norway maple and ash trees are planted along East Main Street and linden trees along West Main Street. The Courthouse Square located between South Center Street, East Main Street, East Church Street and South First Avenue functions as a small park. It contains a mix of deciduous and coniferous trees planted following the restoration of the Marshall County Courthouse in 1978. They include white ash, concolor fir, Colorado blue spruce, crab apple, hackberry, Norway maple, pin oak, green ash, Japanese lilac and low lying junipers close to the Courthouse. A semi-circular paved parking lot is located on the south side of the building. Diagonal sidewalks approach the north entrance from Center Street and 1<sup>st</sup> Avenue with double-width approaches on the north and south axes. Period style park benches and flowerbeds line the shaded diagonal walks.

The Marshalltown Downtown Historic District includes a mix of commercial buildings ranging in scale from two-story, narrow-width retail buildings to three-story corner blocks to a multi-story hotel, fraternal hall and warehouses. Civic buildings include a courthouse, sheriff's residence, municipal building, civic auditorium and public library. Several buildings had special functions including a commercial bakery, newspaper printing plant, an opera house and a movie theater. The District contains no buildings built exclusively for apartment use. Residential neighborhoods surround the District on the north and west edges with a hospital complex located to the east across S.R. 14 (3<sup>rd</sup> Avenue) and a mixed industrial and residential neighborhood to the south. Several churches are scattered along Church Street immediately south of the District and along West Main Street west of 2<sup>nd</sup> Street. A substantial majority of buildings in the District date from the 1860s through the 1940s with a handful of non-contributing structures built or substantially remodeled after 1950.

The Marshall County Courthouse at 1 East Main Street (Photo # 1, NRHP) visually dominates the Marshalltown Downtown Historic District. Visible from several miles to the south, this 3-story stone building was completed in 1886 when the central business district was well established. It was designed by John C. Cochrane (1835-1887) of Chicago, architect of the Iowa State Capitol, in the Italian Renaissance Style. The domed building is fashioned from "LeGrand white marble," a type of limestone extracted from the LeGrand Quarry located in Marshall County and sometimes referred to as "Iowa Marble." The well-preserved building is richly ornamented and its setting on the public square gives focus to the historic district.

East of the Courthouse Square at 20 South 1<sup>st</sup> Avenue is the former Marshall County Sheriff's Residence and Jail (Photo #2). This two-story brick building was designed in the French Second Empire Style. Though the decorative metal roof cresting has been removed, the mansard roof on the entrance tower and main roof, a bracketed cornice and both

County and State

segmental and semi-circular arched windows provide a picturesque facade. The surviving portion of this building served as the residence for the county sheriff with the non-extant rear wing functioning as the jail. The second county courthouse (non-extant) was located just north of this site.

A block north of the Courthouse Square, a group of four municipal government buildings was developed between 1902 and 1929. They include the Marshalltown Public Library, the Marshalltown Municipal Building, the Marshalltown Memorial Coliseum and the Central Fire Station (non-extant). A fifth building originally used as the Northwestern Bell Building (1938) was converted to use as the Marshalltown Police Station during the 1980s. The earliest of these buildings, the Marshalltown Public Library at 36 North Center Street (Photo #3), was constructed in 1902 with a Carnegie grant. Like the Marshall County Courthouse, it is constructed of LeGrand white marble in the Classical Revival Style. A buff colored stone is used for the foundation stone with the whiter limestone reserved for the main building. Corinthian columns mark the corner entrance while dentils, a heavy molding and balustrade with raised cut stone panels set off the cornice and parapet.

Built less than two decades later in 1921, the Georgian Revival Style Marshalltown Municipal Building at 24 North Center Street (Photo #4) was suitably designed for its Classical Revival Style neighbor. Designed by Harry E. Reimer, the building has a first floor clad in cut limestone with a beltcourse separating it from the reddish-brown colored brick of the second floor. Pairs of Tuscan columns flank the shallow entrance portico with pilasters supporting the pedimented roof on the second floor. Distinctive features of the building are the original windows that combine fixed single lights and multi-light transoms. A simple stone molding forms the cornice.

At the end of the 1920s, a third building was added to the civic complex. The Marshalltown Memorial Coliseum at 20-24 West Street (Photo #5) was designed by Cedar Rapids architects Josselyn and Todd. Construction of the building followed a municipal referendum with the building completed in 1929 by local contractor C.F. Reimer Company. The tan colored brick and ashlar stone building is located west of the library and houses an auditorium-gymnasium and meeting rooms. The building has an asymmetrical front with two-story ionic columns flanking the entrance. Ashlar stone surrounds the entrance bay and forms the foundation facing across the front while cut-stone jack arches are used for the windows.

Though not originally built as a civic building, the Police Station at 22 North Center Street (Photo #6) joined the civic complex in ca. 1980. Located immediately south of the Municipal Building, it was built in 1938 as the Northwestern Bell Building. The building's simple brick and stone design reflects the Art Deco Style.

The downtown's central business district extends east and west along Main Street. The block face north of the Courthouse Square between Center and North 1<sup>st</sup> Avenue contains nine structures. Three were built during the 1860s and 1870s before the courthouse was completed, when the block was known simply as the "Public Square." The Woodbury Block at 32-36 East Main Street (Photo #7) was originally built in the Romanesque Style in ca. 1862 at the northeast corner of the square. The building's appearance was radically modified thirty years later when \$8,000 of "repairs" gave the three-story building a well-proportioned Neo-Classical Style design. The retrofitting included a new brick and dressed limestone façade, stone and metal beltcourses, an elaborate metal cornice with brackets and modillions, and new window groupings complete with keystoned arches. By the 1940s the current corner storefront appeared. It had been altered to house a jewelry store with the addition of black and white Carrara Glass™ cladding, metal trim, and narrow, horizontal display windows.

The Israel Moore Building built next door to the Woodbury Block at 30 East Main Street (Photo #8) is good example of the first generation of narrow front masonry buildings built in the downtown. This two-story building was constructed in ca. 1870 in the Italianate Style. Its modest shop space was well suited to a succession of retail businesses. The building has a plastered stucco finish with scoring designed to make the building look like cut stone. Three semi-circular arched windows with stone surrounds are evenly spaced across the second level and an ornamented wood cornice has paired brackets.

The third building constructed in this block prior to, during, and immediately following the Civil War is the W.C. Page & Co. Building at 20 East Main Street (Photo #9). Constructed in ca. 1875, this narrow front building is an example of a late-19<sup>th</sup> century vernacular Brick Front commercial building form. The building's most distinctive characteristic is the brickwork of

Marshall County, IA  
County and State

the upper wall and cornice. A well-executed row of corbeling extends across the front separating the second floor window openings from the cornice. The decorative sheetmetal cornice consists of a series of horizontal bands containing a mixture of dentils, moldings, and geometric panels with vertical moldings placed to create a bracket effect.

The 100 block of East Main Street extends from 1<sup>st</sup> Avenue to 2<sup>nd</sup> Avenue and contains 12 buildings. The Iowa Savings Bank at 101-103 East Main Street (Photo #10) was constructed in 1913. This brick and limestone bank was designed in the Classical Revival Style. Its prominent location looks onto the Courthouse Square diagonally opposite the Woodbury Block. Fluted stone columns and pilasters are equally spaced across the front and west facades. Ionic capitals and a plain entablature top the columns with a dentiled cornice molding projecting beneath the parapet.

Further east along East Main Street are two buildings constructed during the 1890s. The building at 122-124 East Main Street (Photo #11) was built in ca. 1895 and is an example of the vernacular Brick Front building form. The building's wide storefront likely dates from the 1920s or slightly earlier. Its elements remain unaltered including plate glass display windows framed in narrow copper, a leaded transom above the door, lower bulkheads or kick plates of the display windows covered in ceramic tiles with decorative openings for ventilation and a coffered ceiling treatment used for the entrance way and display windows. In addition to the remarkable display windows, the building's most notable architectural feature is its well-executed geometric patterned brickwork. The symmetrical stepped parapet has a stone coping.

On the opposite side of the street, the Kibbey Building was constructed at 125-129 East Main Street (Photo #12) in 1894, the same building season that saw the Woodbury Block remodeled. The only example of a Richardsonian Romanesque Style building in the downtown, the Kibbey Building has an ashlar sandstone façade with dressed stone arches and trim. The symmetrical front originally had two shop spaces with one occupied by the post office. These spaces were divided into four bays and remodeled using black and cream colored Carrara Glass™ cladding in the early 1930s. The balance of the building remains true to its Romanesque design including the massive round arched entrance to the upper level and the symmetrical arrangement of round arched windows on the second floor and dentiled cornice and stepped parapet.

At the end of the block at 134 East Main Street is the Hotel Tallcorn (Photo #13), the tallest building in downtown Marshalltown. The eight-story building was constructed in two phases with the lower seven floors completed in 1928 and the top floor added in ca. 1970. This prominent corner hotel building is an example of the Classical Revival Style built in the three-part form that evolved for multi-story office buildings, hotels, and theaters in the early 20<sup>th</sup> century. In the case of the Hotel Tallcorn, the base or first floor was constructed of limestone. The shaft or middle portion of the building is clad in mottled reddish-brown and gray brick and consists of five levels. The upper section of the building originally consisted of the seventh floor and cornice. The plain dressed stone beltcourse separating the sixth and seventh floors served as the sills for the windows. The cornice was modified when the eighth floor was added. This level consists of a tinted glass wall set beneath the original cove molding of the cornice. The alteration detracts minimally from the building's overall three-part form. As the tallest building in downtown Marshalltown, the Hotel Tallcorn continues to have an important presence. The Hotel Tallcorn is similar in design to the Chieftain Hotel in Council Bluffs completed several years earlier by the same Omaha based hotel company. The balance of the 100 block of East Main Street contains a mix of two and three-story Brick Front retail buildings, a former IOOF Hall, and a group of remodeled buildings that house a pizza restaurant.

Most of the 200 block of East Main Street falls within the District. One important building in this block is the Letts-Fletcher Co. Building at 201-205 East Main Street (Photo #14) built in 1898. Built as a warehouse for a wholesale grocery company, the four-story masonry building incorporates tan and brown brick in horizontal bands and limestone trim that appears to be LeGrand white marble. The building is designed in the Romanesque Revival Style with a combination of flat and semi-circular arched window openings. The raised basement gives the front entrance and the arcaded front display windows added visual importance.

Next door to the Letts-Fletcher Building was the first Orpheum Theater built before World War I as a legitimate stage for touring vaudeville acts and silent films. It was later converted to a movie theater and renamed the Casino. In ca. 1949 the second Orpheum Theatre opened across the street at 220 East Main Street (Photo #15). Operated by the Radio Keith

Marshall County, IA  
County and State

Orpheum theater syndicate, the Orpheum Theatre is an important example of the dramatic shift in commercial design after World War II. The asymmetrical façade is clad in glazed terra cotta with entrance approaches finished in marble terrazzo. The curved edge of the marquee is reflected in the curved walls of the interior lobby space and the curved glass of the exterior ticket window. The vertical sign left no doubt as to the building's occupant, serving as an entrance to the historic district as well.

The west end of the Marshalltown Downtown Historic District extends for two blocks along West Main Street from Center Street to 2<sup>nd</sup> Street. The first block contains 17 two and three-story commercial buildings that through the years housed three banks, three 5 and 10-cent stores, and a number of dry goods and clothing stores. In 1870 the City National Bank-Fantles Department Store Building at 2-4 West Main Street (Photo #16) was completed at the northwest corner of the Public Square. Originally constructed in the Italianate Style, the building housed a succession of banks until the Great Depression. In 1929 Higgins Department Store opened here and later in the 1930s, Fantles Department Store replaced Higgins. The exterior was substantially remodeled and the current Neo-Classical Style facade installed within a short time. Pedimented and Romanesque arched windows were replaced with wider, flat arched and keystone semi-circular sash with multi-light configurations. The bracketed cornice was replaced with a simplified wide stone molding.

Between World War I and World War II many of the Brick Front and Italianate Style commercial buildings in this block saw new fronts installed. In a few instances, entire buildings were replaced. The Armbruster Block at 29-31 West Main Street (Photo #17) is one example. Constructed in 1906 this two-story brick building appears to be the first building on the north side of West Main Street in this block to have a light color brick. By the mid-1930s nearly all of the buildings had been refaced in either tan or gray brick or glazed terra cotta in place of their late 19<sup>th</sup>-century red and brown brick. The Armbruster Block replaced three earlier 1-story buildings. The second floor windows are organized into three groups with a single 1/1 double-hung window in the center bay beneath a cast stone "1906" date block and groups of three flat topped windows set beneath a wide segmental brick arch in each of the outer bays. Corbeling extends along the cornice and a pediment in the center of parapet contains the building name.

Several building changes along the south side of West Main Street resulted from fires and changes in building use. The Tremont Hotel at 20-28 West Main Street burned in 1902 and was replaced by the Tremont Building the same years. The tan colored two-story brick building was a quarter block in length and featured a simplified Neo-Classical Style design. Fire damage to the adjacent Hopkins Building saw it remodeled in 1903. Another building replacement occurred in an effort to update the use of retail space when the Willard Building located at 36 West Main Street (Photo #18) was constructed in 1931. This two-story brick building is a good example of the Brick Front building form developed during the period. The body is constructed of tan colored pressed brick with brown colored brick and cast stone used for trim. Geometric patterns in the masonry are created using various combinations of headers and stretchers, some resulting in shapes associated with Art Deco Style. Four windows are grouped on the upper level with a contiguous cast stone sill, a course of stacked stretches along the outer edges, and three courses of stacked headers between the windows. Each of the windows has a 6/1 double-hung sash. A beltcourse composed of three courses of rowlock bricks separates the first and second floors. The creative pattern work evidenced in this and other buildings constructed or remodeled between the wars is typical of downtown Marshalltown.

The 100 block of West Main Street contains a mix of building stock in terms of design and age. The Blossom Block at 105-107 West Main Street (Photo #19) was constructed in ca. 1882 as a three-story building and the fourth floor was added in 1903. As originally built, this commercial block was an example of the Italianate Style. When enlarged in 1903, its original bracketed cornice and dominant central pediment were removed. The new fourth floor duplicated Italianate Style elements that closely matched those of the original building. It included a slightly shorter set of windows with nearly identical decorative stone window hoods, a bracketed pressed metal cornice with a low pediment and a course of brick corbeling. Despite the fact that the storefront has had several remodelings, elements of both the original design and the 1903 remodeling remain. The storefront originally consisted of two retail bays with separate entrances. Today, the entrance is set slightly off center and the display windows project about 18" onto the sidewalk. A decorative metal architrave separates the storefront from the second floor. Cast iron pilasters set off the entrance and the transoms above the display windows may be intact beneath wood panels.

County and State

Around the corner at 12 North 1<sup>st</sup> Street (Photo #20) is another example of a richly ornamented Italianate Style building. Constructed in 1883, this narrow front building features decorative window hoods, corbeling in each of the window bays, and an ornamental metal cornice with elaborate moldings, dentils, brackets and central pediment.

The *Times-Republican* Building at 135 West Main Street (Photo #21) serves as a bookend at the west end of the District. It was constructed in 1927 to house the printing plant and business offices of Marshalltown's principal newspaper, the *Times-Republican*. The *Times-Republican* Building is an example of the Spanish Renaissance Revival or Mission Style, referred to by contemporaries as the "California style." The two-story (plus basement) freestanding building has a low-pitched hipped roof with deep overhangs and a clay tile roof. Decorative modillions are evenly spaced along the eaves. The walls are clad in cream colored glazed terra cotta and trim, which includes dentils along the eaves, rope molding around round arched windows, frames and sills, dentiled beltcourse moldings, pilasters between pairs of windows on the upper level and a curved watertable molding. The building's original copper downspouts remain.

While first and second generation building continued at a brisk pace along Main Street before and after 1900, several important buildings soon appeared surrounding the Courthouse Square. As was noted earlier, the second Marshall County Courthouse (non-extant) was located along South 1<sup>st</sup> Avenue on the east side of the square. Next door to the south, the former Marshall County Jail and Sheriff's residence (discussed previously) were located at 20 South 1<sup>st</sup> Avenue. In 1908, the Masonic Temple Building at 26-30 South 1<sup>st</sup> Avenue (Photo #22) was built. This five-story brick building was designed in the Classical Revival Style. Its trim elements include terra cotta ornamentation around the central entrance, cornice, and pilaster capitals that vertically separate the building's three bays. The first floor retail space and offices on the upper levels were designed to generate income for the fraternal organization that owned the building. The upper levels also contain meeting rooms, a large assembly hall, and offices for the Masonic organization.

South of the Courthouse Square, the Marshalltown Post Office (non-extant) was built in 1902 at the southeast corner of Church and Center Streets. Its Classical Revival Style made it important civic landmark until it was replaced by a new bank building in 1963. The YMCA-YWCA Building (non-extant) was located next door in 1914. The only pre-World War II building to survive along Church Street south of the Courthouse Square is the Rude Building at 11 East Church Street (Photo #23). Constructed in 1919-1920 at the southwest corner of South 2<sup>nd</sup> Avenue and East Church Street, the four-story building housed the Rude Auto Company. The building features geometric brickwork, abundant windows and a cast stone name plate centered above the entrance that is emblazoned with the name of the automobile company handled by the auto dealership of Perry C. Rude in the 1920s – "Ford."

Overall, the Marshalltown Downtown Historic District has a high degree of building integrity with 83 percent of the buildings qualifying as contributing. The one contributing site, Courthouse Square, stands at the center of the District. The organic nature of the District has produced successive generations of buildings that survive today along nearly five continuous blocks with only a few interruptions. The most frequent building modifications include altered storefronts with changes in cornices the next most common type of alteration. One fire has left a double-width lot vacant and the installation of a small parking lot followed the removal of several other buildings. Two bank projects, one involving a new building on a prominent corner lot and the other a major remodeling of a mid-block building, occurred in the past 25 years. The District continues to capture the physical appearance and character of the main street business districts built in Iowa between the Civil War and the middle of the 20<sup>th</sup> century.

**Statement of Significance:**

**General:**

The Marshalltown Downtown Historic District is locally significant under Criteria A and C.

Under Criterion A the Marshalltown Downtown Historic District derives significance under the categories "Commerce," "Politics/Government," and "Transportation." The Marshalltown Downtown Historic District is associated with nearly 80 years of commercial development in Marshalltown's central business district from the Civil War through the post-World

**NATIONAL REGISTER OF HISTORIC PLACES**  
**Continuation Sheet**

Section Number 8 Page 7

Marshalltown Downtown Historic District  
Name of Property

Marshall County, IA  
County and State

War II period. The Courthouse Square, facing blocks, and sections of East and West Main Street, West State Street, and North Center Street highlight the community planning efforts of founder Henry Anson and generations of subsequent builders and developers.

Under Criterion C the Marshalltown Downtown Historic District is significant under the theme "Architecture" as a representative collection of the commercial architectural styles and vernacular building forms that appeared in Marshalltown from the 1860s through the 1940s. Several examples of the work of important Iowa architects have been identified to date with a strong likelihood that more exist. In addition to dozens of narrow-front commercial buildings and corner blocks, the District contains several architecturally significant examples of public buildings, a library, a fraternal hall, and several warehouses.

One property within the District is already listed on the National Register of Historic Places: Marshall County Courthouse (1 East Main Street). Two other National Register properties, the Susie Sower House (201 East State Street) and the Binford House, (110 North 2<sup>nd</sup> Avenue) are located immediately adjacent to the north edge of the District.

No significance is asserted under Criterion B, although several buildings have strong associations with prominent local civic and business leaders, or with Criterion D.

***The Development of Downtown Marshalltown:***

The Marshalltown Downtown Historic District consists of the facing blocks that surround Court House Square and five city blocks that extend along Main Street as well as portions of the intersecting streets. These blocks comprise the central business district that developed in Marshalltown, the county seat of Marshall County, from its founding through the mid-20<sup>th</sup> century. Established as the town of Marshall in 1852 by Henry Anson, this central Iowa community was named for Marshall, Michigan by Anson. It was described favorably by early promoters as "one of the finest sites in the State for a large town; high, dry and healthy,"<sup>1</sup> Located approximately ¾ of a mile south of the Iowa River, Marshall initially served as a center for agricultural trade, quarrying, and milling.

As with most Iowa pioneer settlements, early business enterprises focused on distributing the essential products that could not be locally supplied. Buildings that housed trade goods were often primitive and short-lived. One such example was the general store (non-extant) established by Wells Rice in 1853 in Marshall. It was a crude building erected of lime, sand and cement. Iowa's harsh winter climate brought a hasty end to Rice's building according to local historians. A few other general stores were established during the 1850s along with three hotels. Before the decade was out, these enterprises were joined by a shoemaker, hardware store, harness maker, blacksmith and jeweler. The Panic of 1857 left Marshall unaffected, according to historians, and by 1860 population stood at 981.

To see Marshall thrive, local leaders recognized the importance of a rail connection. Marshall resident G.M. Woodbury became a leading promoter of these efforts when he helped organize the Cedar Rapids and Missouri Railroad in 1859. The first goal of the new railroad would be to build a railroad link west from Cedar Rapids to Marshall. Eventually, the line would be extended to the Missouri River. Woodbury had already built the town's first flour mill, opened an important local bank and planned to build a woolen mill. Both stood to benefit from rail connections. He organized successful efforts in 1860 to gain a state land grant and during the next two years lead efforts to secure subscriptions to support the railroad's

County and State

construction to Marshall. By early 1863 the Cedar Rapids and Missouri Railroad (later part of the Chicago and Northwestern Railroad) was finished and for about a year Marshall was the westernmost point in the state reached by railroad. The same year, Marshall saw its name changed to "Marshalltown" to avoid confusion with another Iowa town of the same name. In July 1863 it was formally incorporated as Marshalltown and a mayor and board of five trustees were elected to govern it. G.M. Woodbury was elected as one of the trustees.

On the eve of the railroad's arrival, Marshalltown had a population of some 1,500 residents. Churches and residences were being added at a steady pace, and its two-block commercial district located north and west of the Public Square housed more than 40 businesses in a mix of one and two-story frame structures. A later source describes these businesses as located in "three clusters" along Main Street.<sup>2</sup> The most expensive Main Street lots sold for \$1000 and several three-story brick blocks were completed in time to welcome the arrival of the railroad. G.M. Woodbury's own "Woodbury Block" north of the Public Square was one such building. It was completed in 1862 and eventually held the banking rooms of Woodbury's First National Bank as well as an assembly hall on the third floor that was known as the "Woodbury Opera House."

Arrival of the railroad spurred Marshalltown's growth during the decade of the 1860s. An 1867 business directory lists eight dry goods stores, nine grocery stores, six clothing stores, four millinery shops, four boot and shoe dealers, three drug stores, four fruit & confectionery shops, five hotels, four hardware stores, five blacksmiths, and three lumber dealers among the business houses operating mostly along Main Street and Center Street. Several buildings erected during the decade of the 1860s survive in the District. In addition to the Woodbury Block completed in 1862, a group of three buildings at 112, 114 and 116 West Main Street were completed in ca. 1865. One housed the Marshall Hook & Ladder House while another was used as the Marshalltown City Hall and Hope Hose Station. The Hopkins Building was constructed a block away at 32-34 W. Main Street. Erected in 1868, it had two storefront spaces that were remodeled at the turn of the 20<sup>th</sup> century following a fire to the adjacent Tremont Hotel.

As the decade of the 1870s arrived, Marshalltown celebrated a robust growth in their community. Census figures showed a tripling in population to 3,218. A second railroad reached Marshalltown from the north that year – the Central Railroad Company of Iowa – and the following year the railroad was extended south to the Oskaloosa coal fields. In 1871 provisions were made to grant the Iowa Central a 10-acre site for the construction of railroad shops. The impact of this action was significant in the community. It firmly established Marshalltown as an important rail center with both north-south and east-west connections. Hundreds of jobs were created for railroad workers and those who depended on rail shipping in the decades that followed.

The impact of a second railroad in Marshalltown was felt on Main Street as well. Soon after the Iowa Central connection was made, an effort was made to establish a second business district along South 3<sup>rd</sup> Avenue closer to the rail yards. Two disastrous fires in these blocks in 1872 and 1876<sup>3</sup> gave the competitive advantage to Main Street and as a result, dozens of new brick buildings appeared along Main Street in the wake of the fires. Many of the new structures were two and three-story brick buildings that replaced one and two-story frame buildings. One such example was the Forney Music Hall at 16-18 East Main Street in the block east of Center Street. Henry Forney erected the front half of this building in 1878 intending to add a 1,200-seat opera house at the rear of the site. The City of Marshalltown even agreed to vacate the alley

<sup>2</sup>"Site of Founder's Cabin on Unbroken Prairie Land." *Marshalltown Times-Republican*. Marshalltown, Iowa, June 30, 1953.

<sup>3</sup>The fire of May 2, 1872 destroyed more than two dozen structures that housed retail shops, elevators, a hotel, a woolen mill, dwellings and out buildings before being brought under control. Total loss was \$308,700. As with the earlier fire, the fire of April 6, 1876 began in or near a grain elevator near the rail yard. Loss from the latter fire totaled \$30,000. *The History of Marshall County, Iowa*, Chicago: Western Historical Company, 1878, pp. 502-504.

County and State

adjacent to the proposed building to provide for a larger building site. Forney completed the two retail spaces and the prominent entrance opening to the second floor dance hall but the opera house was never completed. Six other buildings in the block were constructed, however, between 1875 and 1880, replacing earlier, more modest frame structures. A similar building boom was seen in the block west of Center Street where seven buildings survive that were originally constructed between 1870 and 1878.

Federal Census figures show that Marshalltown's population nearly doubled during the decade of the 1870s from 3,218 to 6,240. The 1878 city directory shows a general growth in all types of businesses during the same decade. Main Street and its intersecting streets now included eight dry goods stores, thirteen grocery stores, seven clothing stores, seven millinery shops, thirteen boot and shoe dealers, six drug stores, six fruit & confectionery shops, three hotels, four hardware stores, eight blacksmiths, and eighteen saloons. Three banks occupied prominent corner blocks off the Public Square. Second and third floor office space that had been a relative rarity ten years earlier was now occupied by dozens of professionals including more than two dozen lawyers, eight insurance agents and more than two dozen doctors and dentists. Even after the fires of the 1870s, 3<sup>rd</sup> Avenue and streets adjacent to the railroad stations were popular for hotels with five hostleries competing with the Main Street hotels.

The decade of the 1880s saw growth continue along Main Street with multi-story buildings replacing one-story commercial buildings and dwellings located on the fringes of the downtown. The Blossom Block at 105-107 West Main Street was typical of the larger scale buildings being constructed. Its completion in 1882 nearly two blocks west of the Public Square demonstrated the physical growth of the central business district. Its double storefront was occupied by a succession of drygoods merchants in subsequent years. Without an elevator, a third floor was difficult to operate for retail sales and in this case, was used for lodge rooms.

1884 marked the first year Sanborn Company fire insurance maps were completed for Marshalltown. The maps show commercial buildings extending along facing blocks of Main Street from the alley between 1<sup>st</sup> Avenue and 2<sup>nd</sup> Avenue west to near 2<sup>nd</sup> Street. The "Public Square" remains vacant with the Marshall County Courthouse and Jail in separate buildings facing the east side of the square. Two and three-story commercial buildings line Main Street with offices and meeting halls shown on upper levels of most buildings. At the eastern and western ends of Main Street, dwellings occupy large, irregular parcels. Several businesses associated with the commercial district trade but did not require prime locations occupy sites north and south of Main Street along intersecting streets. These include the Marshall Carriage Works (North Center Street), several agricultural implement companies (South 1<sup>st</sup> Avenue), the Marshalltown Boiler Works (South 1<sup>st</sup> Avenue and Church Street), several livery operations (North 1<sup>st</sup> Street, North 1<sup>st</sup> Avenue, North Center Street and East Church Street), and a roller skating rink (North 1<sup>st</sup> Avenue). A public school occupied nearly a quarter block at the southwest corner of West State Street and North Center Street adjacent to the carriage works. Five churches housed the Episcopal, Methodist Episcopal, Baptist, Presbyterian and Congregational congregations in buildings located along the south side of Church Street between South Second Avenue and South Second Street.

Illustration of Marshall County Courthouse, *Mail Carriers' City Directory of Marshalltown, Iowa, 1890*

Most of the interest during the decade was focused on the Public Square and the proposal to build a new courthouse on this site. The first Marshall County courthouse (non-extant) to be located in Marshalltown stood immediately east of the Public Square along South 1<sup>st</sup> Avenue. By the mid-1870s it was badly in need of repair. In 1876 the Marshall County Board of Supervisors scheduled referenda on building a new courthouse and a new jail. Both measures failed. In writing about the issue several years later, the author for the Western Historical Company's *History of Marshall County, Iowa* added these comments to the public debate:

"The county buildings are not much to boast of. The old Court House erected...under peculiar circumstances, still does duty; and a little jail, that might have served a good purpose in the good old days when men were honest, stands near the Court House, with an air of embarrassment over its own appearance. Before many years, a modern structure will be placed, possibly, on the now vacant square where it should be, adding to the general beauty of the principal street."<sup>4</sup>

In 1882 voters approved the jail referendum, and the next year the courthouse measure was adopted. Original plans provided \$100,000 for its construction but all 17 bids exceeded this amount. Several weeks later, a revised proposal was received from the LeGrand Quarry Co. located east of Marshalltown to build the courthouse for a cost of \$108,000 from the "LeGrand white marble." Ironically, costs for the project eventually exceeded the original bids for a brick structure with the stone building contract totaling just under \$150,000.<sup>5</sup>

<sup>4</sup>*Ibid.*, p. 505.

<sup>5</sup>Plans to replace the 1886 courthouse were discussed beginning in 1954. A combination jail and courthouse were

By 1890 Marshalltown's population had grown to 8,914. Downtown Marshalltown took on the look of a modern city with the addition of electrified streetcars along Main Street. North-south connecting branch lines followed 3<sup>rd</sup> Street on the west end and South 3<sup>rd</sup> Avenue and North 4<sup>th</sup> Avenue on the east end. The West Main Street line and 3<sup>rd</sup> Street branch line connected the downtown with the Iowa Soldiers Home, the cemetery and several residential neighborhoods while the branch lines at the east end of the downtown connected passengers to Union Station, the fairgrounds and Riverview Park along the Iowa River. Owner of the electrified street railway system was the Marshalltown Light, Power and Railway Company formed in 1892 as a combine of the Marshalltown Gas Company, the Marshalltown Electric Company and the Marshalltown Passenger Railway Company. With a bonus of \$5,000 on the line, the electrified line was put in operation by December 31, 1892 despite a major sleet storm the night before.

Woodbury Block, ca. 1874

Completion of the courthouse and the new streetcar service ushered in an era of new buildings and substantial

projected to cost nearly \$1 million and the following year the proposal failed in a county referendum. Another bond issue failed in 1968. Then, in 1972 under the leadership of Muriel Oldham and later John W. Norris and others, a "friends" group was established to champion restoration of the courthouse. The building was placed on the National Register later that year. A referendum on building a new building versus restoration saw voters turn down the idea of a new building. Having reached a stalemate, discussion turned towards preserving the old courthouse through a restoration of historic features and updating of interior spaces and mechanical systems. In 1974 a \$3.2 million bond issue was approved by 71% of the voters. Dedication of the restored building was held in November 1978 and a centennial was held at the courthouse in 1986.

remodelings on blocks facing the Courthouse Square, identified now as the civic and commercial center of the city. The thirty-year old Woodbury Block saw a major remodeling completed in ca. 1894. The building's appearance before remodeling began is shown in the historic photo below.

Woodbury Block, Ca. 1904

The building's exterior was "modernized" with a new brick façade, large new windows, a dramatic cornice, and handsome new storefronts. The Central Iowa Business College took up residence in the upper level while the First National Bank continued to occupy the first floor. A ca. 1904 view of the Woodbury Block after remodeling appears above.

Several other important construction projects completed during the decade of the 1890s point out the preference of developers for east end locations. The Kibbey Building was erected at 125-129 East Main Street in 1894. It was one of several buildings that replaced vacant lots and dwellings along this stretch of East Main. The Kibbey Building was constructed for Dr. W.B. Kibbey for a reported cost of \$12,000. Kibbey was one of nearly two dozen physicians and surgeons with offices scattered throughout the downtown in the early 1890s. Prior to establishing his office in his new business block, Kibbey had leased space in the courthouse. In addition to office space, the building housed retail shops with a section leased for use as the post office. The *Evening Times-Republican* reported completion of over a half-million

Marshall County, IA  
County and State

dollars in construction in 1894 including completion of the Chicago & Northwestern Depot and High School.<sup>6</sup>

A half block east of the Kibbey Building, the Letts-Fletcher Company Building was erected at 201-205 East Main Street in 1898. It housed the company's twelve-year old wholesale grocery business in a four-story building that contained offices and warehouse space. Wholesale jobbers tended to locate in Iowa communities where rail connections made shipping connections optimal. Location on the Chicago and Northwestern trunk line and the Iowa Central Railroad's main north-south line was critical for jobbers such as Letts-Fletcher. The location of the Letts-Fletcher Building close to the railroad passenger depots on South 3<sup>rd</sup> Avenue and just a block from the newly completed Pilgrim Hotel (non-extant) at the northeast corner of 3<sup>rd</sup> Avenue and East Main Street was well-suited to the commercial travelers who frequented the company. Incorporated in 1883, the Letts-Fletcher Company was acquired by the Western Grocery Co. 1901, which operated a series of wholesale grocery houses in Oskaloosa, Mason City, Clinton, and Dubuque as well as Owatonna and Albert Lea, Minnesota and St. Joseph, Missouri. The Letts-Fletcher branch continued to operate at this location until 1952, distributing a wide range of products processed and packaged at their Marshalltown food factory site. These included canned fruits and vegetables, breakfast foods, soaps, starch, vinegar, syrup, and roasted coffee.

As the 20<sup>th</sup> century dawned, Marshalltown's population stood at 11,544. The Sanborn Map completed the following year demonstrated a growing congestion in the central business district brought on by the nearly full development of lots facing Main Street between 2<sup>nd</sup> Street and 2<sup>nd</sup> Avenue. In a number of instances one-story rear additions were attached to buildings for additional storage space. Land-use in the central business district continued to be a mix of first floor retail shops, second floor offices, and third floor meeting halls. Upper levels held cigar factories and "repositories" in several buildings. Nearly every fraternal organization had quarters in buildings they owned or leased. Livery establishments continued to occupy secondary sites in the blocks facing State, Church and Center streets. The 1901 map also shows both the hide and fur factory (non-extant) operated first by Hiram Willard and later by his sons and grandchildren on South 1<sup>st</sup> Street and the Odeon Theatre (non-extant) located just south of Main Street on South 2<sup>nd</sup> Avenue.

Five of the most significant buildings of the first decade of the new century were civic in nature – the post office, library, central fire station, YMCA and Masonic Temple. Location of all five buildings demonstrated the on-going public debate as to where downtown development should be encouraged. Construction of the new Marshalltown Post Office (non-extant) demonstrates the nature and tone of the public debate. East end and west end businesses favored locations in their respective sections of the downtown while the local *Times-Republican* owner, D.W. Norris, insisted on a central location. Public meetings were held, speeches given, and the location argument continued for sometime. The federal government eventually settled on a site just south of the Courthouse Square adjacent to Center Street, a decision that satisfied the community and reinforced the square as the civic center of the downtown. The YMCA (non-extant) was located next door to the new post office and its construction was accompanied by less public debate.

Location of another civic building, a new public library, also appears to have been less controversial. The site selected was at the southwest corner of Center and State streets. It met the test of being centrally located and was vacant at the time. From 1861 through 1876, a combined elementary school and high school occupied the site. By 1901 Sanborn Maps show the site was used as a hay market. In 1902 the library board successfully petitioned philanthropist Andrew Carnegie to fund construction of the new facility. They were initially awarded a grant of \$25,000 and when costs rose, were granted an additional \$5,000. The handsome white building was under construction at the same time the new post office was being erected two blocks to the south. Together the two Classical Revival structures marked the north and south boundaries of the central business district.

The Central Fire Station (non-extant) was another civic building to appear during this decade. Located west of the new public library along West State Street, the station took advantage of a central location and the availability of a vacant parcel of land on the former school site. Its construction followed a disastrous downtown fire discussed below.

<sup>6</sup>"Over Half a Million Expended." *Evening Times-Republican*. Marshalltown, Iowa, January 17, 1895.

Marshall County, IA  
County and State

A fifth quasi-civic building constructed during the decade was the Masonic Temple Building at 26-30 South 1<sup>st</sup> Avenue. It was erected south of the site of the former Marshall County Jail and when it was completed in 1908, was the most substantial building outside of the courthouse in the central business district. Like many other Masonic Temple Buildings built during this time period, the building plan provided for income generating retail and office space in addition to rooms set aside for fraternal use.

The block of West Main Street between Center and 1<sup>st</sup> Street saw substantial new commercial development in the form of both new construction and remodeling in the first decade of the new century. The disastrous fire on March 4, 1902 that destroyed the nearly 30-year old Tremont Hotel served as a catalyst for the new development. The 60 guests and employees escaped unharmed but the building was a total loss. Substantial damage occurred in other buildings on the block as well. Following the fire, the new Tremont Building at 20-28 West Main Street was constructed on the hotel site with retail shop spaces on the first floor and offices on the upper level. Other new buildings to appear in the same block before the decade was out included the Armbruster Block at 29-31 West Main Street in 1906 and the Benedict Block at 13-15 West Main Street in 1908.

In the tradition established in the 1890s of completing major remodeling of existing buildings, two buildings along West Main Street were remodeled at the turn of the 20<sup>th</sup> century, the Hopkins Building at 32-34 West Main Street and the Blossom Block at 105-107 West Main Street. The Hopkins Building was damaged in 1902 by the Tremont Hotel fire located next door. The following year as the new Tremont Building was going up, the front of the Hopkins Building was remodeled with a new brick facing, windows and storefront. The same year the three-story Blossom Block was expanded to four-stories making it the tallest building in the west end of the downtown. The building had a long tradition of being used as a dry goods store beginning in the 1880s with C. A. Stonehill, followed by J.F. Harrigan's Bee Hive dry goods business in the 1890s and by 1903, the Hawkeye Mercantile Co. Subsequent dry goods stores included Whitton & Whitehead Co. in 1906 and the Standard Store in 1912.

Popularity of the streetcar line appears to have reached its peak in the decade following 1900. The Marshalltown Light, Power and Railway Company rebuilt and added a number of lines in 1907. Double tracking of Main Street for five blocks between 3<sup>rd</sup> Street and 4<sup>th</sup> Avenue was completed at this time to facilitate better service.

A common barometer of physical change in Iowa communities is the frequency of new map-making by the Sanborn Company. In the case of Marshalltown, mapping were completed in 1901 and then again in 1910 reflecting considerable change in the city during the nine year period. The most obvious changes in the downtown included the projects described above and a number of projects completed in the 200 block of East Main Street, most of which are non-extant in 2001. The most important included construction of the Benevolent Order of Elks Building at 205 East Main Street (non-extant). A series of first generation commercial buildings also appeared along the north side of the block. They included one-story buildings occupied by a tailor, tin shop, grocery, several saloons, and a restaurant as well as a two-story furniture store. All of these buildings were short-lived.

The second decade of the century saw building continue at a moderate pace in the downtown. Population fluctuated dramatically during the decade from 13,374 in 1910 to 16,065 in 1915 and back down to 15,731 in 1920 due to disruption caused by World War I and the Spanish Influenza Epidemic of 1918-19. A sign of general growth in the community was the construction of bank buildings for the Iowa Savings Bank at 101 East Main Street in 1913 at the corner of Courthouse Square and the Marshalltown State Bank at 5-7 West Main Street in 1919.

The concept of the national franchise store was introduced in downtown Marshalltown during this decade as well. F.W. Woolworth Co. opened their first 5 and 10 cent store in downtown at 27 West Main Street in 1910. The business occupied

**NATIONAL REGISTER OF HISTORIC PLACES**  
**Continuation Sheet**

Section Number 8 Page 16

Marshalltown Downtown Historic District

Marshall County, IA  
County and State

five locations in the next 40 years. Shortly before World War I, another franchise company, the Golden Rule Store, opened in the 200 block of East Main Street. By World War I, the business had relocated to a more promising site at 122-124 East Main Street and the business opened under the company's new name, J.C. Penney Co. The company was one of a series of nationally owned franchise businesses that grew up at the turn of the 20<sup>th</sup> century. Founded in 1902 by James Cash Penney, Golden Rule Stores were cash-only department stores with prices clearly marked for all buyers. The format was successful and spread. In 1913, the chain incorporated under the laws of the state of Utah as the J.C. Penney Company, Inc., and the Golden Rule Store name was phased out. By 1920, 197 J.C. Penney stores were in operation from coast to coast under the slogan "A Nationwide Institution," with total sales of nearly \$43 million. J.C. Penney continued in this location in downtown Marshalltown until after World War II when it relocated to West Main Street. Franchises introduced prior to 1950 included the Kresge's, Gamble's, Coast-to-Coast, and the W.T. Grant Co.

The 1920s was a decade of boom and panic for Marshalltown. The early years saw robust growth following the conclusion of World War I with the *Times-Republican* reporting bank deposits up, land prices rising, farm sales on the incline, and car sales brisk. The growth of major manufacturing concerns, food processors, and wholesale jobbing businesses stimulated job creation and population growth. The Fisher Governor Company established in 1880 to produce simple pump governors was well on their way to becoming the world's largest manufacturer of industrial control valves and pressure regulators. The Western Grocery Co. founded at the turn of the 20<sup>th</sup> century processed dozens of food products for resale through its multi-state wholesale distribution system. The Lennox Furnace Company incorporated in 1904 to produce home heating systems soon flourished. Other firms to prosper by the 1920s included the Marshalltown Trowel Company, a leading manufacturer of hand trowels; Cooper Manufacturing Company, producer of automotive accessories and later lawn mowers; the C.A. Dunham Company, a major manufacturer heating system components; and the Marshall Oil Co., which distributed products to several states.

The growth of industry was accompanied by changes in transportation. Three railroads – the Chicago Northwestern, The Chicago & Great Western and the Iowa Central – continued to vie for freight business and provide passenger service to Marshalltown during the 1920s. More than 20 trains a day brought passengers to and through the city which was now Iowa's 13th largest city in 1925 with a population of 16,868. The street railway system that had been taken over by the Iowa Railway and Light Company in 1912 continued to operate through the downtown. The long-standing 5-cent fares rose to 10 cents in 1924 and in the summer of 1928, the streetcars were replaced by bus service.

Automobiles introduced as a novelty after the turn of the century, gained popularity by 1920. The first local filling station opened in 1915 and within a few years was joined by more than 20 automobile dealerships, automobile supply companies, auto liverys and filling stations. Most were located several blocks south the central business district along 2<sup>nd</sup> and 3<sup>rd</sup> avenues and intersecting streets. The first traffic lights were installed along Main Street in 1928 and the same year, a city ordinance limited automobile parking to one hour along Main Street. Parking meters were not introduced along Main Street until 1946, despite business owner objection that they would inconvenience shoppers.

Popularity of the automobile saw attention turn to the condition of roads during the 1920s. The activities of the "Good Roads Movement" on both the state and local level were led by Marshalltown newspaper publisher, D.W. Norris, in this period. He succeeded in persuading the Marshalltown City Council to begin efforts to pave local streets with concrete and in 1915 persuaded the Marshall County Board of Supervisors to pave a sample mile of the Lincoln Highway with concrete donated by the Lincoln Highway Association. The latter project was never completed, however. The route of the Lincoln Highway as it passed through Marshalltown followed 3<sup>rd</sup> Avenue north to East Main Street and then turned west for three blocks along Main Street to Center Street. From here it turned south for one block along Center before turning west along West Church Street. In subsequent years, Marshalltown's motto proudly related its location on the Lincoln Highway on its municipal stationery – "Marshalltown – on the Main Street of the Nation."

The most prominent building in the Marshalltown Downtown Historic District associated with the growth of the automobile is the Rude Auto Co. Building located at 11 East Church Street. Constructed in 1919-20, this five-story building was built by brothers Perry and John Rude to house their Ford auto dealership. They had opened the first Ford dealership in Marshalltown in 1914 and five years later at the end of World War I, set out to build the best Ford garage in Iowa. The \$225,000 fireproof building held space for display and service of Ford cars, trucks and tractors. It had a specialized 22-foot elevator capable of transporting automobiles between floors. Physicians with offices in the Masonic Temple Building located a half-block away, used a portion of the building as interior parking for their automobiles. The dealership continued here for about twenty years.

Other automobile related businesses located east of the Rude Building including several auto supply businesses, service garages and used car dealerships. One of the more unusual business enterprises was the Neil & Stockwell Motor Co. located in a freestanding two-story building at 106 East Church Street in ca. 1925. This automobile dealership – new or used, unknown – was run by two women, Margaret Neil and Ruth Stockwell, who resided in the second floor apartment. Neil continued her involvement with a subsequent female partner, Catherine Lang, under the name Neil & Co. and by the early 1930s the business had relocated along the route of the Lincoln Highway along South 3<sup>rd</sup> Avenue.

The decade of the 1920s saw another round of civic building activity. The post office put on a major addition in 1926 to keep up with a growing workload. Further up Center Street, after considerable debate, construction finally was completed on the Municipal Building just south of the Public Library in 1924. This followed five years of discussion about the size and cost for the structure, several eviction suits (1918 and 1920) brought by Marshall County to evict the city offices from space they occupied in the courthouse, a special election in 1919 to approve its construction, delays due to labor scarcities (1919-20), and an election that ousted the city leaders responsible for introducing the project in 1921. Nevertheless, construction commenced in 1921 and was fully completed three years later.

The fourth component of the civic complex along North Center and West State streets was completed at the end of the decade. In 1923 the local American Legion post first proposed constructing a memorial to veterans of World War I. Several fundraising campaigns and subscription efforts were held to raise \$50,000 to construct a building. After several efforts, the decision was made to pursue funding a memorial hall through municipal bonds. In 1927 the \$125,000 bond referendum was approved by a three-to-one margin in a special election. A site west of the Central Fire Station at 20-28 West State Street was selected for the memorial building. The building would have an auditorium with a seating capacity of 2,500, meeting rooms for the G.A.R, Spanish-American War veterans, the American Legion and the National Guard. The building was dedicated in 1929 as the Marshalltown Memorial Coliseum.

Construction projects were completed all along Main Street during the decade of the 1920s with the most significant buildings constructed at each end and less substantial remodelings finished in between. At the west end, the *Times-Republican* newspaper company completed a new building at 135 West Main Street in 1927. The *Times-Republican* traced its roots to several earlier Marshalltown newspapers. The *Times*, founded in 1862, absorbed the *Expositor* after the Civil War briefly operating as the *Union*. In 1875 after several ownership changes, the paper resumed the name, *Daily Times*. In 1880 the *Times* merged with the *Weekly Republican* combining the newspaper and job printing operations of both companies.

In 1899 with circulation at 3,000 David W. Norris assumed an ownership interest, becoming president as well as editor and publisher for the *Marshalltown Times-Republican*. The same year, rural free delivery was established locally, boosting circulation of the daily edition to rural households. A \$50,000 fire in late 1919 disrupted regular publishing for a time but daily editions soon resumed. Three years later the paper claimed that no daily newspaper in any town in the country of less than 20,000 population had a circulation equal to that of the *Times-Republican*. In 1927 work was completed on the \$60,000 *Times-Republican* Building on West Main Street.

Several buildings were constructed or remodeled in the block of West Main Street between Center and 1<sup>st</sup> Street during the decade. Both the LaShelle Building at 33-35 West Main Street and the second S.S. Kresge Building were under development in 1929. In the case of the LaShelle Building, construction was actually a major remodeling that involved installation of an updated façade. An entirely new building was built for the S. S. Kresge Company at the opposite end of the block at 1-3 West Main Street. Here the company established one of its new "Dollar Stores" directly across the street from its successful 5 and 10 cent store and diner. On the south side of West Main, a major remodeling was underway.

Although several storefront remodelings took place along East Main Street during the decade, nothing was as significant as construction of the seven-story Hotel Tallcorn in 1928. Its construction was accomplished following a successful local subscription drive by boosters that was encouraged by newspaper publisher D.W. Norris. The *Times-Republican* noted that "the shrieking of whistles and ringing of bells and the welcoming of the dawn of a new era for Marshalltown" accompanied the announcement that the fundraising campaign had reached its goal.<sup>7</sup> When the handsome new hotel opened in October 1928 it was the tallest building in the downtown, its skyscraper design dramatically changing the skyline. In the wake of the hotel building success, a second campaign to building an eight-story theater-office building was launched early in 1929 with \$100,000 in stock purchased by May. Then, in September came the announcement that the value of farm land was in sharp decline. The office building project was never completed. The following month, confidence of the business community would be shaken by an event taking place half a continent away, the Black Thursday Stock Market Crash.

It was two years before the full impact of the Depression was felt in Marshalltown. Early indications of the hard times included the establishment of a local employment bureau by the chamber of commerce, a plan by the city to put "professional bums" to work, and efforts to provide food for the needy. In 1932 two banks closed and the city and county governments were called upon to assist the growing ranks of unemployed by establishing "make work" jobs. The private sector responded by establishing a "Put Marshalltown to Work" committee.

The 1930s saw population rise from 17,373 in 1930 to 19,240 in 1940 despite the Depression. New construction projects in the downtown slowed to a trickle during most of the decade. The exceptions included a series of façade replacements along Main Street. On the southwest corner of West Main and Center streets, the general malaise in the banking industry saw the First National Bank close. By 1934 the building's exterior was completely remodeled and the first floor outfitted with department store windows. The new tenant was Fantles Department Store, part of a chain of Midwestern department stores. Despite the Great Depression the business survived and twenty years later had 30 employees.

Other less prominent buildings to receive remodelings in the latter half of the decade when the hard times were beginning to wane included three adjacent buildings at 6-8, 10-14 and 16 West Main Street. In each case, the buildings had their facades clad in new brick, replacement windows installed and contemporary storefronts installed. By the end of the 1930s all but one of the buildings on the south side of West Main Street west of Center Street would have a replacement façade.

Two new buildings to appear in the downtown during the decade included the Willard Building and the Northwestern Bell Telephone Co. Building. The Willard Building at 35 West Main Street was constructed in 1931 to house the retail outlet for "H. Willard Son & Co.", a tanner and fur coat manufacturer that traced its Marshalltown roots to the Civil War period. In about 1912 H. Willard Son & Co. opened the retail business on West Main Street selling furs, coats, lap robes and millinery. During the 1920s women's clothing was added. In 1931 the original 3-story building was replaced with a 2-story structure. The new building's full basement included extensive vault storage for furs during the summer season. The tannery, taxidermy and fur manufacturing business continued in the factory building (non-extant) south of the retail store. Continued popularity of fur coats during the 1930s and 1940s provided a brisk business. Catalogues offered mail-order customers an assortment of mittens, muffs, coats, jackets and other fur accessories.

The Northwestern Bell Telephone Co. Building was constructed in 1938 at 22 North Center Street adjacent to the Municipal Building. This telephone building held offices, repair shops, and automatic exchange equipment. Its construction marked the year dial phone service was first offered to Marshalltown customers. Construction of the new building may have been linked in part to the growing popularity of the telephone during this decade despite the Depression. Records show that the number of phones in 1936 stood at 5,479 – more than the pre-Depression high.<sup>8</sup>

Another prominent remodeling marked the end of the Depression years. The S.S. Kresge Co. expanded and remodeled adjoining buildings at 2-6 East Main Street for their 5 and 10 cent store. This project was designed to accommodate Kresge's expansion into the former Stepan Drug Co. building at the corner. The buildings were faced in new brick and given a "modern" appearance consistent with Kresge's Dollar Store at 1-3 West Main Street. The Kresge luncheonette was known to have the longest food counter in the city with a capacity for 72 diners.

Despite the handful of remodeling and building projects, the profound impact of the Depression years in Marshalltown was felt rather than seen on the downtown. The banks that closed were soon replaced by new financial institutions operating from the same buildings. The foreclosures and lost savings accounts left no visual evidence. Neither did dozens of business closures or hundreds of jobless workers. City directories recorded the only evidence along Main Street – frequent business changes, vacant shop spaces, and an abundance of second-hand furniture stores, used clothing shops, and collection agencies. The community and government response to the Depression went unrecorded visually as well since no major WPA projects were completed in the central business district.

The decade of the 1940s began with America going to war. The focus of Marshalltown residents on war efforts combined with shortages in construction materials to limit downtown development during the first half of the decade. After the war concluded, a number of downtown businesses saw returning soldiers join family businesses and another generation begin to make an impact. By the end of the decade, several new building projects and a number of remodeling efforts were under way. At the west end of the downtown, a new building was constructed for an enlarged J.C. Penney Department Store at 119-125 West Main Street in 1949. The same year, Younkers Department Store located in a remodeled building at 22-24 East Main Street north of the Courthouse. The Des Moines based company, whose motto was "Satisfaction Always," handled women's and children's clothing, shoes, millinery and domestics.

The last major building boom in the Marshalltown Downtown Historic District during its period of historical significance (1862-1950) occurred in the 200 block of East Main Street. The Capitol Theater (non-extant) located at 216 East Main Street burned in 1945. The fire proved to be an opportunity for the Strand Baking Company located next door at 210 East Main Street. The bakery was started in 1918 by the Strand brothers and acquired in 1939 by Clarence Cramer. Under his leadership, the bakery expanded several times and modern baking equipment was installed. After the theater burned, the bakery extended along East Main Street to include the equivalent of four storefronts. From a workforce of 36 in 1939, the company grew to 92 by 1953. Strand Bakery operated as a regional commercial bakery serving customers in a 60-mile radius of Marshalltown by 1950.

Further to the east another building was under construction at the same time that the Strand Bakery expansions were underway – the R-K-O Orpheum Theater at 220 East Main Street. Opened in 1948, the theater was the first constructed by the Radio Keith Orpheum Company since 1942 when wartime shortages of construction supplies brought nearly all private building projects to a halt. A contemporary newspaper account suggests the 900-seat theater cost in excess of \$200,000 to build. Due to its size and modern appointments, the Orpheum became a local cinema showplace. Air-conditioned seating, good acoustics and a thoroughly modern decor brought hundreds of regular theatergoers to

County and State

downtown and the Orpheum during the 1950s and 1960s.

The second half of the 20<sup>th</sup> century saw the Marshalltown Downtown Historic District continue to evolve but at a slower pace than previous decades. Citywide population grew from 19,821 in 1950 to 26,009 in 2000 with the pace of growth per decade ranging from a decline of 7% between 1980 and 1990 to an increase of 16% between 1960 and 1970. Marshalltown slipped from ranking as Iowa's 13<sup>th</sup> largest city to 15<sup>th</sup> between 1940 and 1950 when population increases in Ames and Iowa City outpaced Marshalltown's growth.

During the 1950s and 1960s the downtown served as the center of Marshalltown retail shopping, banking, county and municipal government, and a range of recreational and social activities. Retail businesses included a mix of national and regional franchise stores and locally owned companies. Shop spaces rarely remained vacant for long. Upper level offices continued to be occupied by physicians, lawyers, dentists, insurance agents, and realtors. When Marshalltown's centennial was celebrated in 1953, a parade down Main Street past the Courthouse Square marked the event. A system of paved state and county roads as well as a U.S. highway provided the means for Marshalltown to establish itself as a regional shopping center. Expansion of local manufacturers such as the Fisher Governor Company at the south edge of the central business district through the construction of a new corporate headquarters in the 1950s affirmed the downtown's role as the heart of the community.

The changing role of downtown was signaled during the decade of the 1970s. Citywide population had grown by nearly one-third between 1950 and 1970 while the size of the downtown remained unchanged. Limited parking areas and congested traffic were the bane of the downtown. The situation was ripe for the introduction of a shopping center on the outskirts of town and in 1972, the Des Moines based General Management Corporation opened the Marshalltown Center on the south edge of town a short distance from the first U.S. Highway 30 by-pass. Younker's Department Store, an important downtown business during the 1950s and 1960s, left to become an anchor tenant in the new shopping center. In subsequent years some downtown businesses relocated to the mall while other downtown businesses saw their competitors locate in the shopping center rather than downtown.

A handful of buildings experienced substantial remodelings between 1950 and 2000. Examples include the Apgar Studio at 18 West Main Street in 1955, the multiple storefront of Zeno's Restaurant at 107-113 East Main Street in 1972, the conversion of the former J.C. Penney Building at 119-123 West Main Street into the Commercial State Bank in 1980, and the conversion of the former Northwestern Bell Building at 22 North Center Street into the Marshalltown Police Station in the early 1980s. The only new building completed along Main Street was the Security Savings Bank at 102-110 East Main Street in 1977.

The Apgar Studio building tells the story of the downtown during the 20<sup>th</sup> century. Constructed in ca. 1875, it served a number of uses from 1900 until it was remodeled for its current use as a photography studio in 1955. City directories show a dry goods business here in 1899 and by 1912, the Colonial Theatre operated on the first floor and a shirt manufacturer was on the second floor. In 1923 the Electric Supply Co. was housed here and by 1928 Nora DeLuhery operated her hat shop on the first floor. That year the Apgar Studio, a photography studio operated by Ross E. Apgar, moved into the second floor of this building when its former studio space at the northwest corner of Center and Main streets was razed to make room for the new Kresge Building. By 1934 the Beck Hardware store was on the first floor and five years later Offman's Food Store operated from the first floor. By the end of World War II, the Allbee Office Equipment store was on the first floor while the Apgar Studio continued on the second floor. R.E. Apgar's son, R. Patton, joined his father in operation of the second floor studio after World War II concluded. In 1952, Patton bought the business from his father and began designing new studio space for the first floor and basement level. In 1955 the remodeling was completed. Apgar Studio's work was well received locally and a number of Patton's portraits received state and national awards. In 1981 the third generation of the Apgar family joined the studio and in 1987, Tom Apgar bought the business which he heads today. All of the black and white photos taken for the Marshalltown Central Business District National Register of Historic Places nomination were taken by Patton Apgar.

The same year that Apgar Studio moved into its new quarters, partners Rocky Lavallo and Elmer Zeno Kluck purchased Joe's Pizza at 109 East Main Street renaming the restaurant "Rocky's Pizza." Four years later Lavallo sold his share of the restaurant to Kluck and the name was changed again to "Zeno's Pizza." The pizzeria thrived during the 1960s taking advantage of its location one block west of the Orpheum Theater. Seating was added in 1961 and again in 1963 when the building to the east was acquired. Further change came during the 1970s when more street frontage was acquired and the buildings' fronts were given a unified façade treatment.

To assuage traffic congestion in the downtown during the 1970s, Main Street was converted to a one-way street carrying east bound traffic. West bound traffic was moved to State and Church streets. Success of the traffic plan was debated by local residents and downtown merchants and in 2000 two-way traffic was reestablished along Main Street. State road 14 continued to follow 3<sup>rd</sup> Avenue at the east end of the central business district. Traffic signals remain at the intersections of 2<sup>nd</sup> Street, Center Street and 3<sup>rd</sup> Avenue along Main Street as well as the intersections of State and Church streets along Center Street. Downtown parking meters were removed by the 1980s and replaced by 2-hour parking spots in an effort to compete with free parking available at competing shopping center sites. Several municipal lots were also added along State Street with one private lot in the District adjoining Zeno's Restaurant. Removal of two adjacent commercial buildings in the 200 block of West Main Street occurred by the 1990s and the site has remained vacant since then.

| Population for Marshalltown <sup>9</sup> |            |
|------------------------------------------|------------|
| Year                                     | Population |

***The Architecture of the Marshalltown Downtown Historic District:***

The Marshalltown Downtown Historic District is architecturally significant because its buildings collectively reflect the architectural styles and vernacular commercial building forms popular locally and across the United States during the eight decades that spanned the Civil War through the middle of the 20<sup>th</sup> century. The District contains more than a dozen good examples of the Italianate Style and Romanesque Revival dating from the 1860s through the 1890s. The buildings include narrow front and double width commercial buildings in scattered mid-block locations as well as several prominent corner blocks. The Renaissance Revival and variations of the Neo-Classical Style were adopted for another group of commercial buildings and public structures that were built on and around Courthouse Square and in the complex of civic buildings along North Center and West State streets during the 1880s through the 1920s. One good example of a Mission or Spanish Renaissance Style building was built during the 1920s and several buildings that capture the Moderne Style were built during the 1930s and 1940s.

Vernacular commercial buildings are among the most abundant architectural examples in the Marshalltown Downtown Historic District. Several dozen vernacular Brick Front buildings dating from the 1870s through the 1920s are scattered along Main Street. They exhibit a range of masonry techniques, design elements and materials. In some instances these buildings employed simple geometric patterns and multi-colored brick to achieve well-proportioned building facades. In other cases, complex brick pattern work was combined with tinted mortars, contrasting colored brick, and cast stone or terra cotta elements to achieve highly ornamented buildings.

One architectural trend of particular note in the Marshalltown Downtown Historic District involved the designs selected for public buildings and civic structures. The first of a series of noteworthy designs based on a Classical theme was for the Marshall County Courthouse (National Register listed), a three-story stone building begun in 1884 and completed in 1886. It was designed by John C. Cochrane (1835-1887) of Chicago. Cochrane began his career designing Iowa buildings in the early 1870s while residing in Davenport. He moved to St. Louis after only a few years and then Chicago but continued to design buildings in Iowa throughout his career. Cochrane's most notable commission along with his partner A. H. Piquenard, was the Iowa State Capitol in Des Moines that was completed shortly before the Marshall County Courthouse was undertaken. Cochrane's design for the Marshall County Courthouse is an example of the Italian Renaissance Style. The building occupies a prominent setting, its Classical stone design visually dominating commercial blocks along Main Street and Center Street.

In 1902 two Neo-Classical Style buildings appeared along Center Street that ran along the west side of Courthouse Square. The Marshalltown Post Office (non-extant) embodied the rich Classical vocabulary of hundreds of federal buildings from this period. The Marshalltown Public Library constructed the same year two blocks to the north adopted a Neo-Classical design that differed from both the Post Office and the Courthouse. Plans for constructing a new fire station west of the library necessitated optimizing the use of land by locating the front facades of the library at the corner lot lines rather than setting the building back in the tradition of many Classical Style public buildings. Architect of the Public Library was the firm Patton & Miller of Chicago, a firm known as a prolific designer of Carnegie libraries.

During the 1920s the last two buildings with Classical designs were added to the municipal complex along North Center and West State streets. The first, Marshalltown Municipal Building at 24 North Center Street, is an example of the Georgian Revival Style, a variation of the Classical styles that gained in popularity during this period. The building's red brick walls and raised stone foundation were consistent with the edicts of the style and cost restraints forced upon the project. Designer for the project was Harry E. Reimer of Marshalltown. Reimer was the son of local contractor C.F. Reimer and at the time this commission was completed, he was the only local architect. Reimer's practice included several other local public buildings – the Marshalltown High School (non-extant) and the Deaconess Hospital (non-extant). He had a Marshalltown office from 1913 until his death in 1938.

The Marshalltown Memorial Coliseum was the final building constructed in the civic complex and it, too, evidenced Classical Style elements. Architect for the project was Josselyn and Todd of Cedar Rapids. H.S. Josselyn and Eugene Taylor established the firm during the 1880s as the Josselyn & Taylor Company. The firm had a practice that extended throughout the state and included a number of important commercial and institutional projects. Among the more

**NATIONAL REGISTER OF HISTORIC PLACES**

Marshall County, IA  
County and State

significant commissions by the firm was Brucemore (2160 Linden Drive SE, Cedar Rapids and the Cedar Rapids Public Library. Their design work was viewed by a national audience in the Iowa State buildings built for the World's Columbian Exposition in Chicago and the Omaha Exposition.

A second architectural trend in the Marshalltown Downtown Historic District involved the practice adopted before the turn of the 20<sup>th</sup> century of completing substantial remodeling projects on existing downtown buildings rather than replacing them with new structures. This practice produced some of downtown's most significant building designs during the next 50 years. One of the outcomes of these remodelings that is clearly observable in the downtown today is the unusually large number of buildings clad in tan, cream and light gray colored brick rather than the more traditional dark red and brown brick. Nearly all of the buildings in the first block of West Main Street are finished in these brick colors with most of the buildings built or remodeled sometime between 1902 and 1940. Similar brick colors were used for vernacular designs on buildings scattered along the balance of Main Street.

Together, the buildings of the Marshalltown Downtown Historic District tell the story of architectural styles adopted for buildings from the Civil War through World War II. A list of significant examples of various architectural styles and vernacular commercial building forms follows.

**Commercial Architectural Styles**

**Late Victorian Italianate Style:**

Centennial Block, 13-17 South Center Street (ca. 1876)

W.C. Page & Co., 20 East Main Street (ca. 1875)  
Israel Moore Building, 30 East Main Street (ca. 1870)

Blossom Block, 105-107 West Main Street (1882, 1903)  
Calhoun Building, 120 West Main Street (ca. 1880)

12 North 1<sup>st</sup> Street (1883)

**Late Victorian Romanesque Style:**

Kibbey Building, 125-129 East Main Street (1894)  
Letts-Fletcher Co. Building, 201-205 East Main Street (1898)

**Late Victorian Renaissance Style:**

Marshall County Courthouse, 1 East Main Street (1886)

**Late 19<sup>th</sup> and Early 20<sup>th</sup> Century Classical Revival Style:**

Marshalltown Municipal Building, 24 North Center Street (1921)  
Marshalltown Public Library, 36 North Center Street (1902)  
Woodbury Block, 32-36 East Main Street (1862, ca. 1895)  
Iowa Savings Bank, 101-103 East Main Street (1913)  
Hotel Tallcorn, 134 East Main Street (1928)

City National Bank Building, 2-4 West Main Street (ca. 1870)

Marshalltown Downtown Historic District  
Name of Property

Marshall County, IA  
County and State

***Contributing and Non-Contributing Properties:***

By definition, a historic district is a collection of buildings, that when considered as a group rather than individually, possesses a sense of time and place. They may share building type, style, form or material. They have a common period of significance that may extend through a few years or several decades. They consist of contiguous properties or multi-block areas with relatively few intrusions. Integrity for individual buildings, as well as the their setting, should be high.

Buildings within historic districts are divided by definition into two categories: non-contributing and contributing resources. Non-contributing resources are those buildings that do not share a common heritage with the district as evidenced in building type, architectural style(s), form, materials or period of significance. Non-contributing buildings are generally considered to be intrusive in nature and would not be missed if removed from the district. Buildings less than 50 years old are considered non-contributing.

The category of contributing resources can be further divided by definition into key buildings and supportive buildings. Key buildings within historic districts are those buildings that are individually eligible for the National Register of Historic Places. Integrity standards for these properties should be the same as those established for individually eligible buildings outside of historic districts. Architectural integrity of supportive buildings may be somewhat less. For example, changes in window and door openings, cornice and beltcourse trim, or storefront changes may be acceptable. The addition of fixed awnings and changes in signage would also be acceptable for most key buildings and all supportive buildings.

The Marshalltown Downtown Historic District contains a total of 95 properties with 79 contributing buildings of which 34 are key or individually significant and the balance supportive. Courthouse Square surrounding the Marshall County Courthouse is the only contributing site in the district. The balance of the district contains 16 non-contributing buildings and approximately 4 parcels containing parking lots or vacant land. One building is already listed on the National Register.

County and State

The evaluation of contributing and non-contributing status of buildings within the Marshalltown Downtown Historic District was done using a set of standards that were established to be consistent with National Register requirements and at the same time reflect Marshalltown's organic development through the years. It is understood that contributing buildings in commercial historic districts are more likely to have been altered than contributing properties in residential districts. In the case of Marshalltown's downtown, a frequent practice beginning prior to 1900 and continuing through the 1930s involved not just minor remodeling, but the substantial rehabilitation of a building's exterior by removing cornices and adding new brick cladding, different windows and modified storefronts. In approximately 9 cases these substantial rehabilitations have acquired historical and architectural significance in their own right and were considered historic alterations.

It was expected that all contributing commercial buildings including retail buildings, warehouses, theaters, fraternal buildings, banks, office buildings, hotels, auto showrooms and garages retain either their *original* appearance in terms of basic shape, proportions, rooflines and important architectural features, or the appearance acquired during a subsequent *historic alteration* (one that is at least 50 years old). In both cases, the upper levels of their principal façade(s) were expected to remain relatively unchanged in terms of placement and size of window openings, masonry detailing such as corbeling and cornice design. Easily reversible alterations, such as the addition of fire escape ladders or the temporary closure of windows with shutters or boards, were not considered significant. The replacement of multi-pane sash with reconfigured windows was acceptable (e.g. 6/6 double-hung sash replaced by 1/1 double-hung sash), but changes in the shape or type of windows were considered a more significant change (e.g. segmental arched double-hung sash by smaller, casement windows). Changes in window openings that are more than 50 years old were evaluated on a case-by-case basis to determine their impact.

Greater change was considered acceptable for storefront levels on commercial buildings since these areas typically experience considerable change, due to the fact that the average life of a storefront in the United States is only about ten years. The manner in which important storefront elements were treated was evaluated individually. Such elements included the shop and/or upper level entrances, transoms, shop windows, beltcourses, ornamentation and awnings. In general, modifications made to storefronts in commercial buildings more than 50 years ago were likely to be considered significant in their own right if they were preserved relatively intact. Alterations made within the past 50 years did not automatically preclude a building from being eligible for the NRHP. These more recent alterations were assessed on a case-by-case basis to determine if they supported or detracted from a building's important design elements.

Alterations made to convert the use of commercial buildings were also commonplace in central business districts. They were considered insignificant unless they resulted in the loss of important interior public spaces. In summary, integrity standards for commercial buildings in the Marshalltown Downtown Historic District assumed that buildings have, by necessity, evolved and changed through time. This organic quality of business districts provided the set of integrity expectations used for evaluating the District's buildings.

The integrity standards developed for public buildings such as courthouses, libraries, city halls and civic auditoriums, anticipated some organic change as well. These building types were expected to retain their original shape and proportions with original window and door openings (not necessarily original sash or doors) and other important architectural features. Construction materials for foundations and walls were expected to be original. The use of modern roofing materials was an acceptable alteration. In general, modifications made more than 50 years ago were accepted as part of the historic appearance of these building types. Additions or wings were accepted if they were located along a non-principal façade, had sympathetic design elements, were connected in a fashion that caused minimal alteration to the historic section of the building and were constructed of compatible building materials. The addition of exiting systems installed for public safety purposes was expected to be carried out on non-principal façades. Treatments of entrances that have been altered to accommodate handicapped access were evaluated on a case-by-case basis to determine their

County and State

impact on overall design.

There are only two dwellings within the Marshalltown Downtown Historic District. Both buildings were determined to be contributing structures because they remained relatively unaltered, retaining their original appearance in terms of basic shape, proportions, rooflines and important features. Principal façades remained relatively unchanged with placement and size of window openings and primary entrances consistent with the original design. Both residential buildings maintained original porches, though sympathetic modifications were accepted.

A list of buildings within the Marshalltown Downtown Historic District follows with their designation as contributing or non-contributing noted. "Key" buildings (those that would be considered individually significant if located outside of the Marshalltown Downtown Historic District) are marked with a ⚡. Non-contributing properties are so designated because they contain buildings that were built outside of the period of significance for the District (1862-1950) or because alterations to the building are of a substantial nature.

In the future it is possible that several of the non-contributing buildings might become contributing if rehabilitations of their exteriors are completed that either remove or reverse major alterations. Some may also move into the category of "key" buildings.

*Summary:*

In summary, the Marshalltown Downtown Historic District is locally significant under Criteria A and C. Under Criterion A, it derives significance from its association with several important periods of commercial and civic development in Marshalltown during the last three decades of the 19<sup>th</sup> century and the first half of the 20<sup>th</sup> century.

Under Criterion C the Marshalltown Downtown Historic District is significant as a representative collection of the architectural styles and vernacular commercial building forms that appeared in Marshalltown from the 1860s through the 1940s. Several examples of the work of important Iowa architects have been identified along with the work of one local architect. The District contains architecturally significant examples of public buildings, commercial blocks, warehouses, a hotel, and a theater.

The combination of visual qualities and historical associations gives the Marshalltown Downtown Historic District its distinct identity and significance.

**Verbal Boundary Description:**

Within the City of Marshalltown, Marshall County, Iowa:

Beginning at the intersection of the centerline (C/L) of West Main Street and 2<sup>nd</sup> Street; thence north on the C/L of North Second Street to the alley; thence east along the C/L of the alley across North 1<sup>st</sup> Street to a point located at the southwest (extended) corner of Lot 5, Block 9 (the west side of the Marshalltown Memorial Coliseum Building); thence north to the C/L of West State Street; thence east along the C/L of State Street across North Center Street to a point located 60 feet east of the northwest corner (extended) of Lot F, Block 10; thence south to the C/L of the alley; thence east along the C/L of the alley across North 1<sup>st</sup> Avenue and North 2<sup>nd</sup> Avenue to a point located at the northeast corner (extended) of Lot 10, Block 12; thence south to the C/L of East Main Street; thence west to the C/L of the alley; thence south to the C/L of East Church Street; thence west along the C/L of East Church Street to the C/L of South 1<sup>st</sup> Avenue; thence south to the C/L of the alley; thence west along the C/L of the alley 120' to the southwest corner of Lot 2 (extended), Block 21; thence north to the C/L of East Church Street; thence west along the C/L of East Church Street to the C/L of South Center Street; thence north 80' to a point 20' north of the southeast corner (extended) of Lot 11, Block 15; thence west to the C/L of the alley; thence north along the C/L of the alley to the C/L of the intersecting alley; thence west along the C/L of the intersecting alley across South 1<sup>st</sup> Street to the C/L of South 2<sup>nd</sup> Street; thence north along the C/L of South 2<sup>nd</sup> Street to the point of beginning.

**Boundary Justification:**

The west boundary for the Marshalltown Downtown Historic District is the traditional boundary separating the churches and residences built along West Main Street from the commercial district. Although some dwellings in the 200 block of West Main Street have been converted to shops and offices in recent years, these buildings are freestanding frame and brick residences interspersed between masonry church buildings.

The north boundary for the District follows the east-west alley that parallels Main Street between Main Street and State Street with one exception. The commercial and civic buildings fronting on North Center Street have played an important part of the operation and evolution of the central business district. West of North Center Street, the civic complex includes the public library, municipal building, civic auditorium, and a telephone company building converted to use as a police station. Facing buildings on the east side of North Center in the first block north of Main Street both historically and presently function as retail shops and offices.

The east boundary for the District extends along the east edge of the easternmost extant historic buildings facing East Main Street. A series of parking lots abut the boundary. About a half block to the east is 3<sup>rd</sup> Avenue, the route of S.R. 14 as it passes through Marshalltown from north to south.

The south boundary runs generally along the east-west alley that parallels Main Street between Main Street and Church Street with one exception. Because of the importance played by Courthouse Square, all contributing buildings facing the square along Main, Church, Center and 1<sup>st</sup> Avenue have been included within the District. Because of their new dates of construction, the buildings at the southeast corner and northwest corner of Center and Church streets have been excluded from the District.

MARSHALLTOWN, IOWA

## MARKET-BASED STRATEGIC PLANNING 2023

# INTRODUCTION

The economic landscape of traditional downtown and neighborhood commercial districts continues to change. Expanding retail competition, evolving technologies, and changing lifestyle trends continue to affect business opportunities and the way of life in our traditional downtown business districts.

The Main Street Iowa Market Study and Strategies service engages the market itself – community members, area residents, business persons and other stakeholders – to gain an understanding of local and regional market conditions and trends impacting the district's position in the market and opportunities for the future. Insights and directions derived through the process serve to ground the community's vision in the realities of the marketplace and provide a basis for projects and activities that align with, and are carried out as part of, a well-coordinated and congruent transformation strategy

This document summarizes key strategies for Downtown Marshalltown economic development and enhancement initiatives based on an extensive review of background information and current market data; input provided via consumer and business surveys; and direction and leadership provided by Marshalltown Main Street leaders, volunteers and community members.

## Marshalltown, Iowa is a Main Street Iowa Community.

*The Market-Based Strategic Planning process was completed with technical assistance and support provided by Main Street Iowa.*

*The mission of the Main Street Iowa Program is to improve the social and economic well-being of Iowa's communities by assisting selected communities to capitalize on the unique identity, assets and character of their historic commercial district.*

### Limitations and Disclaimers

Retail market studies and analyses, their components (such as retail sales gap analyses and surveys interpretation) and derivative business development plans provide important guidance on how a commercial area should, theoretically, be able to perform and on the sales levels businesses should be able to achieve. However, a number of factors affect the actual performance of businesses and commercial areas, including the skills of the business operator, level of business capitalization, the quality of the physical environment, changes in overall economic conditions, the effectiveness of business and district marketing programs, and many other factors. The information in this document is intended to provide a foundation of information for making district enhancement and business development decisions, but it does not and cannot ensure business success.

As is true of all demographic, economic and market studies, our analysis' reliability is limited to the reliability and quality of the data available. Our research assumes that all data made available by and procured from federal, state, county, city, primary and third party sources is accurate and reliable.

Because market conditions change rapidly and sometimes without warning, the information and opinions expressed here represent a snapshot in time and cannot predict or gauge future changes or results.

# COMMUNITY PROFILE

## Welcome to Marshalltown

Located in central Iowa, Marshalltown is a diverse community with a population of approximately 27,000, and serves as the county seat for Marshall County. The historic Court House, recently renovated in 2023, anchors the downtown commercial district. In 2018, Marshalltown experienced an EF-3 tornado that ripped through the northern portion of the community, including the downtown. The majority of buildings had some level of damage, ranging from broken windows to complete destruction. Then in 2020, amid the pandemic, the entire community was hit by a derecho, a straight-line wind event, causing even more damage. As a community in recovery, Marshalltown, more than ever, is positioned to grow, incorporating creative placemaking efforts into the redevelopment opportunities throughout the community!

Downtown Marshalltown is the vibrant, beautiful, welcoming heart of this diverse community. It offers a rich mix of opportunities and experiences for residents and visitors, with arts, entertainment, retail, dining, and housing options in a unique, historic setting. Downtown provides a range of business opportunities for entrepreneurs and investors. Many of the small businesses are owned and/or operated by women or minorities. The growing Hispanic population has reached 30% of the community population, with additional diversity being added with an influx of residents from Myanmar (Burma). Its places and spaces are connected by a safe, accessible network of landscaped streets and walkways where people gather and connect with one another, strengthening community pride and building lasting memories. Downtown Marshalltown is the place to live, work, and play.

Marshalltown's people are the driving force behind the community's Main Street designation and progress being made to improve downtown. In 2002, Marshalltown was designated as a Main Street Iowa community with the purpose of community-driven economic revitalization centered around the historic downtown.

The spark lit by the Main Street Organization has helped to implement several projects, big and small, aimed at improving the community and to encourage the growth of the downtown businesses. Historic buildings are being renovated to make way for new housing and business development, including the historic Orpheum Theater, owned by the Marshalltown Community School District, and renovated into a community welcome center to welcome residents to the school and the downtown district. Murals, alley improvements and new green space developments on vacant lots where buildings once stood are adding new vitality to the downtown. Collaborative efforts such as these are driving positive changes and progress to build a thriving downtown in the heart of Marshalltown.

## Top Esri Tapestry Segment Groups

Downtown Marshalltown Drive Time Areas | Esri 2022

Esri's Community Tapestry is a geodemographic segmentation system that integrates consumer traits with residential characteristics to identify markets and classify U.S. neighborhoods. Tapestry Segmentation combines the "who" of lifestyle demography with the "where" of local geography to create 67 distinct market segments.

### Heartland Communities [18% of households]

- ▶ Budget savvy consumers
- ▶ The rural economy of this market provides employment in the manufacturing, construction, utilities, healthcare and agriculture industries.
- ▶ They embrace a slower pace of life but actively participate in outdoor activities and community events.
- ▶ These older householders are primarily homeowners, and many have paid off their mortgages.
- ▶ Most have high-speed internet access at home or on their cell phones.
- ▶ Their children have moved away but they have no plans to leave their homes.

### Traditional Living [15% of 10 min. households]

- ▶ Households are a mix of married-couple families and singles.
- ▶ Many families encompass two generations who have lived and worked in the community; their children will likely follow suit.
- ▶ Manufacturing, retail trade, and health care sectors are the primary sources of employment.
- ▶ This is a younger market-beginning householders who are juggling responsibilities of living on their own or a new marriage, while retaining their youthful interests in style and fun.
- ▶ Cost-conscious consumers that are comfortable with brand loyalty, unless the price is too high.
- ▶ Connected and comfortable with the internet, they are more likely to participate in online activities and posting to social media.
- ▶ News junkies (read a daily newspaper, watch news on TV, and go online for news)

### Midlife Constants [21% of 10 Minute Households]

- ▶ Residents are seniors, at or approaching retirement.
- ▶ Their lifestyle is more country than urban, they live outside the central city.
- ▶ Primarily married couples, with a growing share of singles.
- ▶ Settled neighborhoods with slow rates of change and residents have lived in the same house for years.
- ▶ Traditional, not trendy; apt for convenience and comfort not cutting edge.
- ▶ 63% have a high school diploma or some college.
- ▶ Almost 42% of households are receiving Social Security; 27% also receive retirement income.

# THE DOWNTOWN MARSHALLTOWN MARKET

## Retail Market Power CLARITAS 2023

An understanding of area supply and demand for retail and food and drink establishments, infused with local insights on market forces influencing performance and opportunities in the marketplace, can yield a meaningful assessment of a retail market's performance and possibilities for growth.

Data sources from Claritas' Retail Market Power (RMP) 2023 Retail Stores Opportunity Gap serve as a good starting point for assessing and tracking overall sales volumes and retail performance. The report helps identify market strengths, retail clusters, and possibilities for complimentary business types, products and uses. It may also help in detecting gaps in the business mix and possible repositioning, expansion, and recruitment opportunities.

| - Potential Sales (Demand)                        | \$24.6M   | \$50.8M    | \$65.5M    |
| - Est. Surplus/(Leakage)                          | (\$2.5M)  | (\$7.5M)   | (\$17.7M)  |
|                                                   |           |            |            |
| Total Retail, Food and Drink (NAICS 44 – 45, 722) | 5 Minutes | 10 Minutes | 20 Minutes |
| - Est. Sales (Supply)                             | \$347.2M  | \$589.1M   | \$670.5M   |
| - Potential Sales (Demand)                        | \$234.3M  | \$480.4M   | \$619.7M   |
| - Est. Surplus/(Leakage)                          | \$112.8M  | \$108.7M   | \$50.8M    |

Estimates shown in millions and rounded to nearest one hundred thousand dollars.

#### SUPPLY > DEMAND = SALES SURPLUS

A surplus could signal the area is attractive to retailers and offer opportunities for complementary or niche establishments that capitalize on existing strengths, clusters and consumer patterns.

#### SUPPLY < DEMAND = SALES LEAKAGE

Areas showing leakage may help to attract new establishments or reveal changes that could be made to an existing business' menu or product mix to fill gaps and increase market share.

## Potential Opportunities

Sales gap factors provide an at-a-glance means of assessing the relative strength of various retail categories within a defined geography. The factor is a measure of the relationship between supply and demand that ranges from +100 (with negative value factors might offer an initial indication of gaps in the business mix and potential targets for expansion or recruitment).

### SALES GAP FACTORS | DOWNTOWN MARSHALLTOWN DRIVE TIMES

# MARKET SURVEY OVERVIEW

## Downtown Appeal and Uses

Overall visit rates cited by consumer survey participants reflect the broader attraction of downtown created by a diverse mix of business types, uses and activities—and reinforce a position catering, primarily, to the everyday needs of Marshalltown area residents.

| Table 1                                                                                                           |         |

# MARKET SURVEY OVERVIEW

## Anchors and Traffic Generators

Consumers surveyed cited numerous local restaurants as the downtown business or place frequented most often. The wide range of local dining options located downtown, along with other businesses and places most frequently visited, provides solid support for a locally-driven market position.

44%

Named a local restaurant as the downtown business or place visited most frequently.

Source: 2023 Downtown Marshalltown Consumer Survey.

| Most Frequent Business or Places (Top 10) |                      |
|-------------------------------------------|----------------------|
| Table 9                                   |                      |
| 1. Smokin' G's BBQ                        | 6. Tannin Wine Bar   |
| 2. Tremont Grill                          | 7. Public Library    |
| 3. Sub City                               | 8. Local Banks       |
| 4. Ocean City                             | 9. Churches          |
| 5. Zeno's Pizza                           | 10. Fiddle & Whistle |

The public library, financial institutions and area churches are included in the list of top ten places visited most frequently, demonstrating their value in attracting—and holding—consumers in the local marketplace. Moreover, the results provide direction for strategies and activities that:

- ▶ Capitalize on existing anchor businesses and activity generators, including complementary business opportunities;
- ▶ Heighten awareness for the local nature of the business mix and the full range of products, services and experiences offered in Downtown Marshalltown; and
- ▶ Incorporate design features and enhancements to better define and promote the downtown district.

34%

Of all consumer survey responses cited filling vacant storefronts and recruiting more business as the first thing they would do to improve downtown Marshalltown.

# THE MAIN STREET APPROACH

## The Main Street Approach to Revitalization

Main Street Iowa works with member communities and organizations to adapt a time-tested and proven approach to revitalization developed and promoted by Main Street America™, a program of the National Main Street Center. The approach provides a framework for communities to rebuild, preserve, and reinvigorate their historic and older downtowns and neighborhood commercial districts.

The Main Street Approach® consists of three essential and tightly integrated tools:

1. **Community Vision** that is informed by broad and inclusive community input *and* market understanding.
2. **Transformation Strategies** that incrementally create positive changes in the district's economy. These are implemented through simultaneous activity in four broad areas of work that, together, constitute the "Four Points." In brief:
  - ♦ **Design** encompasses improving all the physical and visual aspects of the district.
  - ♦ **Organization** involves cultivating partnerships and resources for the district.
  - ♦ **Promotion** is about marketing the district.
  - ♦ **Economic Vitality** focuses on capital, incentives and other economic and financial tools for business and property development.
3. **Impact measurement** includes monitoring quantitative and qualitative outcomes.

# TRANSFORMATION STRATEGIES

## Downtown Marshalltown Transformation Strategies

This document summarizes market information and community insights to provide direction for potential projects, actions, and initiatives that support and align with the community's vision for Downtown Marshalltown and the pursuit of the following Transformation Strategies:

1. *Community Gathering Space*
2. *Thriving During Downtown Revitalization & Construction*
3. *Business Activation & Development*

## Transformation Strategies Explained

A *Transformation Strategy* articulates a focused, deliberate path to revitalizing or strengthening a downtown or commercial district's economy. Grounded by both an understanding of the underlying drivers of the local and regional economy, as well as community feedback and engagement, a Transformation Strategy should describe a market position that the commercial district can successfully fulfill.

***An effective Transformation Strategy serves a particular customer segment, responds to an underserved market demand, or creates a differentiated destination.***

Simply stated, a *Transformation Strategy* is a comprehensive strategy that guides the direction of the revitalization initiative and, over time, transforms the district. Each Transformation Strategy has several important characteristics:

- ▶ It is **rooted in the community's vision** for the district.
- ▶ It is **based on a solid analysis and understanding** of the district's economy and its best economic opportunities.
- ▶ It is **comprehensive**, in that it is implemented through a broad range of activities that span the four broad areas of work represented by the Four Points.
- ▶ It is **measurable**, making it possible to track progress.
- ▶ It **provides guidance for program activities for a two- to five-year period**, after which the revitalization program should examine progress and make adjustments, as needed.

In general, a revitalization organization should work with one or two Transformation Strategies at a time. In some exceptional circumstances, it might consider tackling three Transformation Strategies—but more than three would be challenging.

# TRANSFORMATION STRATEGIES

## Strategy #1 Community Gathering Space

This strategy will foster a safe, inviting, and inclusive downtown that encourages people to spend time and money downtown. We strive to be a destination place for visitors as well as growing our community connectedness.

## Community Gathering Space

### ACTION STRATEGY

|                   | Goal                                                                                                                                                        | Actions                                                                                                                                                                                                                                                                                                                                                                                                                              | Measure Efforts                                                                                                                                                                                                                                       |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ECONOMIC VITALITY | Utilize downtown events to showcase opportunities for business development                                                                                  | <ul style="list-style-type: none"> <li>Treasures Tour to showcase potential business spaces &amp; build awareness of downtown opportunities (NEW)</li> </ul>                                                                                                                                                                                                                                                                         | <ul style="list-style-type: none"> <li>1 new downtown renovation project based on treasures tour opportunities</li> </ul>                                                                                                                             |
| DESIGN            | Utilize and/or create clean and welcoming space in the downtown for the community to gather                                                                 | <ul style="list-style-type: none"> <li>Adopt a Berm</li> <li>Team Up to Clean Up</li> <li>Flower Baskets</li> <li>Archway design &amp; installation</li> <li>Create temporary parks in available lots (NEW)</li> <li>Connect Church Street parking lot to the Alleyway for events (NEW)</li> </ul>                                                                                                                                   | <ul style="list-style-type: none"> <li>Increase in volunteers</li> <li>All Berms have been adopted</li> <li>Increase in foot traffic</li> <li>Local cultures will feel welcome and seen.</li> <li>Positive first impressions will be made.</li> </ul> |

# TRANSFORMATION STRATEGIES

## Strategy #3 Business Activation & Development

This strategy will build on objectives already in place to revitalize, stabilize and transform downtown into a place where businesses grow and thrive and where new businesses choose to locate.

## Business Activation & Development

### ACTION STRATEGY

|                    | Goal                                                                                                                                                                     | Actions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Measure Efforts                                                                                                                                                                                                                                                                                                                                                           |

# NEXT STEPS

## Transformation Strategy Activities

Activities proposed in this document serve as a good starting point and guide for moving forward. Still other ideas and activities are likely to grow out of this study's findings and those already contained in the Main Street Marshalltown work plans and other city planning documents. To that end, the ultimate selection and implementation of activities must also consider the organization's capacity to take on new projects, with an understanding that implementation—and change—will occur over a period of time.

## Supporting and Sustaining Activities

The ability to move forward on the ideas and opportunities advanced as part of this study, along with those already in motion or contained in other planning documents, will also hinge on a strong organizational foundation and supporting activities that, while not explicitly spelled out within the context of any market study, are absolutely essential to the success of Main Street Marshalltown and the community's downtown revitalization efforts.

Main Street Marshalltown's role as partnership builder, resource locator and publicity machine will become even more important in the months and years ahead. In some cases this role may require the organization to locate or develop entirely new sources of funding to execute a new project, or to find a new volunteer source to ensure that a new festival or event is adequately staffed. In other cases, it might require the organization to re-assess priorities and existing budget allocations as priorities may shift based on the findings of this study, and as new opportunities emerge and conditions change in the future.

## Looking Ahead

The completion of this market study is not an end, but rather another milestone in the evolution of the community's downtown enhancement initiative. While the process has served to help identify today's priorities, challenges, and emerging opportunities, it can not, and does not pretend to, anticipate next year's challenges or exciting and unanticipated opportunities on the horizon.

The diligent efforts undertaken by Main Street Marshalltown staff and volunteers to help gather the input, to study the data, and to guide the development of market-driven actions have prepared the organization and the community well by providing a framework and sound basis for future planning and decision making—processes—and activities that align with the community's vision for Downtown Marshalltown.

## Examples: Supporting and Sustaining Activities

### The First Year . . .

- ▶ Share this report with the Marshalltown Main Street Board of Directors. The Board should vote to adopt these strategies and include them in their Program of Work for the next 2-5 years.
- ▶ Discuss activities and ideas generated related to the transformational strategies with all committees and community partners
- ▶ Share Market Study & Strategy outcomes with your elected officials, both city and county.
- ▶ Share Business Survey results with local businesses. Identify opportunities for current business expansions.
- ▶ Develop a public relations campaign to share Consumer Survey results with the public. Include press releases, social media campaigns, monthly newsletter stories, etc. to highlight and inform residents.
- ▶ Review current activities and events and work to better align them with your chosen strategies.

### Year 2 and Beyond . . .

- ▶ Submit a Challenge Grant Application.
- ▶ Apply for Main Street Iowa "Surviving Streetscape" technical service.
- ▶ Host Pop-up vendors in existing storefronts during the holiday season to test market opportunities.
- ▶ Assist in the design and implementation of a Food Truck Lot in the downtown district. Coordinate this service to fill a gap when most restaurants are closed. (Monday)
- ▶ Promote the Open 4 Business program to assist with business expansion efforts in the downtown.
- ▶ Bring back the Treasures Tour to showcase available spaces and build awareness of downtown opportunities.
- ▶ Continue to foster cross culture connections with local organizations, the school district, and churches.

**TO:** Mayor and City Council  
**FROM:** Cindy Kendall  
**DATE:** May 6, 2024  
**RE:** Options for Revitalization Plans

---

**Strategic Plan:**

- ☒ Strategy 1: Expand and improve development in the community.
- ☐ Strategy 2: Enhance Marshalltown's public image.
- ☐ Strategy 3: Continually improve and sustain the City's infrastructure, organization, and services.
- ☐ Strategy 4: Partner with citizens, for-profit, non-profit, and others to improve quality of life.

**Plan Objective:** To discuss Council Options:

Option A) Amend current Commercial Revitalization Plan (CRP) to comply with HF 718

Option B) Restate the Urban Revitalization Plan into one document

**Recommendation:** Begin proceedings to restate the Urban Revitalization Plan, (while I am able to assist) which would include the changes required by HF 718 prior to 7-1-24.

If Council chooses to only amend the Commercial Revitalization Plan at this time, I would recommend restatement of all the plans and amendments be done in the near future.

**Budget Impact:** Legal fees for plan amendment language and public hearing notice

**Description/Background:** The City of Marshalltown first created an Urban Revitalization Plan in 1985. Since that time, many plans and amendments have been adopted. As the City is currently amending the Commercial Revitalization Plan to comply with HF718, bond counsel recommends a restatement to merge all documents into one. None of the policy integrity or intent of these plans and amendments would be lost or changed except the HF 718 portion.

Note: Because the restatement or amendment options will not increase the revitalization map, individual parcel notification is not required.

**CITY COUNCIL**

Al Hoop, Barry Kell, Mike Ladehoff, Mark Mitchell,  
Greg Nichols, Jeff Schneider, Gary Thompson

**TO:** Mayor and City Council  
**FROM:** Geoff Hubbard, Parks and Recreation Director  
**DATE:** May 7, 2024  
**RE:** BPW Park – 407 E Marion St

---

**Strategic Plan:**

- ☐ Strategy 1: Expand and improve development in the community.
- ☐ Strategy 2: Enhance Marshalltown's public image.
- ☒ Strategy 3: Continually improve and sustain the City's infrastructure, organization, and services.
- ☐ Strategy 4: Partner with citizens, for-profit, non-profit, and others to improve quality of life.

**Plan Objective:**

**Recommendation:** Need council direction.

**Budget Impact:** Mowing contract.

**Description/Background:** At the December 27, 2022 council meeting I presented a review of city parks. This overview is included in the packet. It was discussed that Lawrence Park and BPW Park equipment were nearing its end of life. Lawrence Park has since been sold.

At the February 27, 2023, the council directed staff to proceed with the sale of 407 Marion Street through a Neighborhood Improvement RFP to require a building project as part of the sale. There are some development challenges with this parcel in that both sanitary and storm sewer lines run through the property. The City would retain an easement for these lines and would not allow any building over them. This removes the opportunity to split this property into two lots for single family residential construction. Therefore, a duplex or triplex development are required due to the buildable area of 127' x 196'. This RFP was issued in March 2, 2023 with no response. It was then posted again on April 14, 2023 as open until contracted. We have had a some inquires about purchasing however no one has been interested in building with the restrictions.

Staff request the council review how to proceed with this property. Do we keep it on the market for sale or keep maintaining it as a park and look at replacing the playground equipment in the future.

## City Administrator's Office

Joel Greer, Mayor  
Jessica Kinser, Administrator  
Alicia Hunter, City Clerk  
24 North Center Street  
Marshalltown, IA 50158-4911  
Tel - (641) 754-5799  
Fax - (641) 754-5717

### Sale of Residential Lot 407 Marion Street

The City of Marshalltown, Iowa, is accepting bids for the following described real property ("Property") located in Marshall County, known as 407 Marion Street and legally described as the following:

LOT 5 OF LOT 4 OF LOT ONE AND LOT 6 OF LOT 4 OF LOT ONE ALL IN THE  
NORTHEAST QUARTER OF THE SOUTHEAST QUARTER OF SECTION 26-  
84-18, MARSHALL COUNTY, IOWA

The property was previously listed and no bids were received. It is now re-listed with an open-ended timeline. Bids will be considered as received.

The property is 137.7 feet wide by 231.4 feet deep. It is zoned as Medium Density-Residential. The property was originally gifted to the City in 1954 as a park. The City recently decommissioned this property as a park. All park equipment and items will be removed from the property, and the land is being sold in as-is condition with no improvements to be made by the City.

Bids must be submitted on the attached form to the City Clerk, City Hall, 24 North Center Street, Marshalltown, Iowa. The failure or omission of any bidder to examine any form, instrument, or document shall in no way relieve such bidder from any obligation with respect to a submitted bid. Each bid must be submitted on a fully completed bid blank, as provided by the City, in a sealed envelope marked with the Property's address. No faxed or emailed bids will be accepted. Anyone submitting a bid for the Property must agree in writing to meet the conditions set by the City of Marshalltown concerning the uses of the Property.

The Marshalltown City Council will discuss the bids as received, accepting a bid and awarding the sale of the Property to the bidder whose application is the most advantageous to the citizens of the City, as determined by the City Council. The City Council may reject any or all bids in its sole discretion. The City Council reserves the right to waive any discrepancies or technicalities associated with any bid.

#### **Sale of Lot & Construction**

The Property is being sold "AS IS" and no survey has been performed, so the bidder should carefully inspect the Property prior to making a bid on the Property. The property has no known utility connections.

#### **City Council**

Al Hoop, Gabriel Isom, Barry Kell, Mike Ladehoff,  
Jeff Schneider, Gary Thompson, Dex Walker

The Property will be conveyed to the successful purchaser by quit claim deed with right of reversion. If an abstract is requested, the Purchaser must furnish this at their own expense. Closing shall take place within 60 days of award of the Property to the chosen bidder. The entire bid price will be due and payable at closing. All bids must be cash transactions and may not be conditioned on financing.

Bids shall be considered firm offers to purchase the Property and will be held open for a period of sixty (60) calendar days from the above-referenced deadline for submission. If a development agreement prepared by the City and presented to the winning bidder is not executed and submitted to the City within twenty (20) business days of City Council awarding the bid, or if the transaction otherwise fails, the bid will be deemed null and void, and the City Council will proceed to award the bid to the next best bidder as determined by the City Council, reject all bids, or issue a new bid for the Property, in the Council's sole discretion.

The Property is being sold with the sole purpose of encouraging new residential construction in infill areas. The Property will not be sold to increase an adjoining landowner's lot size. This property has storm sewer and sanitary sewer infrastructure, as shown in the attached map. A structure cannot be built over the lines, and the City will maintain an easement. The buildable area on the lot is 127.7 feet x 196.4 feet.

A new duplex or tri-plex must be built or moved onto the Property and made suitable for occupancy within 24 months of closing. Extensions to this time limitation may only be granted by specific permission of the City Council. Homes built must be of stick-built or manufactured residential construction, and meet the following requirements:

- 1) If a driveway is installed exiting onto Marion Street, it must be paved. Any parking areas must also be paved.
- 2) A public sidewalk must be installed.
- 3) Homes constructed must conform to all Marshalltown building and zoning codes.

There is no minimum sales price for the lot.

The City has a residential tax abatement available on new construction on a 3, 5- or 10-year sliding scale. If the units to be constructed meets the requirements of the Make Marshalltown Home program through Marshalltown Area Chamber of Commerce, the owner can elect to take the \$10,000 cash incentive in lieu of the tax abatement. If these units will be rental properties, they must be registered through the City of Marshalltown rental program.

**City Council**

Al Hoop, Gabriel Isom, Barry Kell, Mike Ladehoff,  
Jeff Schneider, Gary Thompson, Dex Walker

## **Bid Form – 407 Marion Street**

Describe the intended use for the property, bidder's experience in residential property development and construction, and any other relevant information. Please attach a separate sheet of paper if needed:

---

---

---

---

Please provide the following information about the residential property to be built:

Square Footage: \_\_\_\_\_ Construction Cost: \_\_\_\_\_

Number of Stories: \_\_\_\_\_ Number of Bedrooms: \_\_\_\_\_

Type of Home/Number of Units: \_\_\_\_\_ (Duplex or Triplex)

My bid for 407 Marion Street: \$ \_\_\_\_\_

Please list any local (Marshall County) subcontractors or suppliers:

---

---

---

\_\_\_\_\_ I acknowledge and agree to all of the requirements detailed in the bid notice and specifically acknowledge and agree to the requirement to complete construction of a home on the Property suitable for occupancy within 24 months.

\_\_\_\_\_ I acknowledge and agree to fully comply with the requirements of the Marshalltown Code of Ordinances as it may relate to construction activities upon the Property.

\_\_\_\_\_ I acknowledge and agree the City of Marshalltown has the right to reject any or all bids.

### **Bidder Information:**

Name: \_\_\_\_\_

Address: \_\_\_\_\_

Contact Phone: \_\_\_\_\_

Signature: \_\_\_\_\_ Date: \_\_\_\_\_

Please seal your bid in an envelope and submit to the City Clerk, 24 North Center Street, Marshalltown, IA 50158.

# CURRENT PARK STANDARDS BEING USED

THE PARK & REC MASTER PLAN THAT WAS COMPLETED IN 2018 USED THE STANDARD OF A PARK BEING LOCATED WITHIN A NEIGHBORHOOD WITHIN A ¼ OF A MILE (5 MIN WALK) TO A ½ MILE (10 MIN WALK). THE GOAL WAS FOR THE CITY OF MARSHALLTOWN IS TO ENSURE ALL RESIDENTS HAVE A PARK WITHIN WALKING DISTANCE OF THEIR HOME.

THE CURRENT MAP SHOWS OUR EXISTING PARK LOCATIONS. IT DOESN'T TAKE INTO ACCOUNT SCHOOL LOCATIONS THAT ALSO HAS PLAYGROUND EQUIPMENT AT THEM

IF A PARK ISN'T WITHIN WALKING DISTANCE THAN RESIDENTS WILL DRIVE TO PARKS AND MANY OF OUR PARKS DON'T HAVE EXISTING PARKING LOTS FOR THEM WHICH COULD BE AN ISSUE.

SHOULD WE BE LOOKING AT A DIFFERENT STANDARD?

### MARSHALLTOWN PARKS AND SERVICE AREAS

Each City park has its own unique needs, users, and opportunities. Therefore, each park has its own set of recommendations, timeline for improvements, and associated costs. The map below highlights the location of each of the parks, as well as the 1/4 mile and 1/2 mile service areas for each. Generally, a 1/4 mile service area indicates an approximate 5 minute walk, and a 1/2 mile equating to a +/- 10 minute walk. A recommended goal for the City of Marshalltown is to ensure that all residents have a park that is within walking distance of their home.

- |                     |                           |                             |                      |
|---------------------|---------------------------|-----------------------------|----------------------|
| 1 BiCentennial Park | 7 BPW Park                | 13 Anson Park               | 19 Kiwanis Park      |
| 2 Lawrence Park     | 8 Riverview Park          | 14 MEGA 10 Park             | 20 Timber Creek Park |
| 3 West End Park     | 9 Nicholson-Ford OHV Park | 15 Marshalltown Skate Park  | 21 Goldfinch Park    |
| 4 Tankersley Park   | 10 Peterson Park          | 16 6th St. Softball Complex | 22 Glenwood Park     |
| 5 Arnold's Park     | 11 Optimist Park          | 17 Judge Park               | 23 Jaycees Park      |
| 6 Elk's Park        | 12 Assistance League Park | 18 Morris Park              | • Future Park        |

Figure 4.3: Marshalltown Parks and Service Areas Map

# WHAT WE'VE COMPLETED FROM THE MASTER PLAN

- ANSON 2019 (\$250,000)
  - NEW HANDICAP ACCESSIBLE PLAY EQUIPMENT AND BATHROOM
  - NEW PARKING/SOUTH 4<sup>TH</sup> AVENUE RECONSTRUCTION
- TIMBER CREEK BRIDGE 2020 (\$500,000)
- WEST END 2021 (\$600,000)
  - NEW SHELTER/PERFORMANCE AREA AND NATURAL PLAY EQUIPMENT
- 6<sup>TH</sup> ST SOFTBALL COMPLEX 2021 (\$500,000)
  - NEW PARKING LOT
- VETERANS COURTYARD (\$185,000)
  - PICKLEBALL COURT AND POETRY PLAZA
- ELKS PARK 2022 (\$187,000)
  - NEW PLAY EQUIPMENT, PICNIC TABLE, GRILL, GRADING, AND BASKETBALL HOOPS

# WHAT WE HAVE PLANNED TO DO IN THE MASTER PLAN

- THE PARK MASTER PLAN PRIORITIZED PARKS NEEDING IMMEDIATE ATTENTION OVER PARKS NOT AS IN NEED. THE CIP PLAN HAS BEEN FOCUSING ON THOSE MORE IN NEED BUT COULD CHANGE IF NEEDED
- FY23
  - ELKS PARK (CIP - \$110,000 + \$66,500 IN CBDG GRANT) **COMPLETED**
  - PETERSON PARK (CIP - \$120,000)
  - KIWANIS PARK (GO BONDS - \$270,000)
- FY24
  - TIMBER CREEK (CIP - \$70,000) REPLACE THE RESTROOM
  - OPTIMIST PARK (OPERATING FUNDS - \$5,000) ADD SOCCER GOALS, REPLACE GRILL, POWERWASH AND STAIN SHELTER.
- FY25
  - JAYCEES PARK (CIP - \$150,000)

# WHAT WE HAVE PLANNED TO DO IN THE MASTER PLAN

- FY26

- ARNOLD PARK (CIP - \$150,000) NEW PLAY STRUCTURE AND BASKETBALL COURT, SIDEWALKS, LIGHTING AND SIGNAGE

- FY27

- ASSISTANCE LEAGUE (TURTLE) PARK (CIP - \$150,000) NEW PLAY STRUCTURE, SIDEWALKS, LIGHTING AND SIGNAGE

- FY28

- BICENTENNIAL PARK (CIP - \$150,000) REPLACE SHELTER, BASKETBALL COURT, SIDEWALKS, LIGHTING AND SIGNAGE

**IN 10 YEARS WE WILL HAVE MADE IMPROVEMENTS IN EVERY PARK EXCEPT BPW AND LAWRENCE PARK.** STAFF WOULD RECOMMEND HAVING SOME CIP FUNDS (<\$50,000) ALLOCATED AFTER FY29 FOR SMALLER REPAIRS & REPLACEMENTS

# CURRENT MAINTENANCE PLAN

- CITY STAFF CURRENTLY MAINTAINS RIVERVIEW PARK, TRAILS & HWY 14 MEDIANS
  - MOWING, WEEDEATING, WEED SPRAYING, TREE TRIMMING/REMOVAL IN RIVERVIEW AND ALONG THE 22 MILES OF TRAILS WITHIN THE CITY LIMITS
  - DO LIMITED WEED SPRAYING IN OTHER PARKS/TRAILS IF NEEDED
- ALL OTHER PARKS ARE CONTRACTED OUT TO PRIVATE CONTRACTORS TO MOW
  - WE CURRENTLY BUDGET \$38,000 FOR THESE MOWINGS (\$15,000 IS FOR NON-PARK AREAS AND IS PAID FOR OUT OF ROAD USE TAX BUT P&R MANAGES THE CONTRACTS)
  - CONTRACTS INCLUDE MOWING, WEEDEATING, PICK UP AND REMOVAL OF TRASH, STICKS, DEBRIS
  - CONTRACTORS ARE REQUIRED TO MOW EVERY 7-10 DAYS AT A HEIGHT OF 2 ½ - 3" OR MORE/LESS IF NOTIFIED BY PARK & REC DUE TO WEATHER
  - CONTRACTS ARE BID OUT EVERY 2 YEARS WITH AWARDS GOING TO THE LOWEST BIDDER FOR EACH PARK/AREA
  - NON- PARK AREAS INCLUDE ALONG ANSON CREEK, PLAZA HEIGHTS, HIGHWAY 14, 12<sup>TH</sup> AVE TERRACES, 3<sup>RD</sup> AVE CLOVERLEAF, SUMMIT/13<sup>TH</sup> ST, 3<sup>RD</sup> & 6<sup>TH</sup> ST VIADUCTS, SOUTH ST LOTS, HIGH STREET & KLASS COURT, NEVADA CREEK

# CURRENT MAINTENANCE PLAN

- WEED SPRAYING
  - WE CURRENTLY CONTRACT OUT SPRAYING OF ANSON, MEGA-10, 6<sup>TH</sup> ST COMPLEX, TRAILS, AND EACH PARK GETS 1 SPRAYING/YR
  - WE CURRENTLY BUDGET \$5000 FOR THESE ANNUAL SPRAYINGS

# CURRENT MAINTENANCE BUDGET

- \$38,000 IN CONTRACT MOWING
  - \$15,000 is ROW, NON PARK AREAS
- \$5,000 IN CONTRACT WEED SPRAYING
- \$185,000 IN FULL TIME STAFF
- \$28,000 IN SEASONAL STAFF
- \$100,000 IN OPERATING BUDGET

# ALTERNATIVE MOWING OPTIONS

- MOW LESS OF CERTAIN PARKS AND CREATE MORE NATURAL AREAS
  - JUDGE – WEST SIDE OF PARK, JUST MOW AROUND THE TRAIL AREA)
  - ANSON – OUTSIDE OF THE BASEBALL FIELD
  - BICENTENNIAL – NW AREA OF THE PARK, JUST MOW AROUND PLAY AREA, BASKETBALL COURT AND SHELTER
  - RIVERVIEW – CREATE POCKET AREAS WITHIN THE PARK AND ALONG THE LEVEE
  - CREATE POLLINATORS POCKETS FOR BUTTERFLIES AND BEES

THE COST SAVINGS WOULD BE MINIMAL– \$1,500-3,000 ANNUALLY

# RECOMMENDATIONS

- REVIEW PARKS AS THEIR USEFUL LIFE OF THEIR EQUIPMENT EXPIRES AND BRING OPTIONS TO THE CITY COUNCIL AT THAT TIME WITH OPTIONS
  - CURRENTLY LAWRENCE PARK IS AT THE END OF ITS USEFULNESS (STAFF WILL BRING OPTIONS TO THE MARCH COUNCIL MEETING FOR DISCUSSION)
  - PARKS THAT ARE GETTING CLOSE ARE THE ONES ADDRESSED IN OUR CIP BUDGET INCLUDE TIMBER CREEK, OPTIMIST, JAYCEES, ARNOLD, ASSISTANCE LEAGUE, BICENTENNIAL, BPW AND THE SOFTBALL COMPLEX PLAYGROUNDS
- REVIEW THE SCOPE OF WORK REQUIRED BY MOWING CONTRACTORS AND MAKE CHANGES TO REFLECT COUNCIL'S EXPECTATIONS
- EXPLORE OPTIONS FOR DECREASING MOWING AREAS WILL INCREASING WEED SPRAYING LOCATIONS
- CONTINUE TO FUND LARGER PARK PROJECTS THROUGH GO BONDS (RIVERVIEW PARK, MEGA-10 AND WEST END)
